## InTRODUCTION

The 2015-16 National Family Health Survey (NFHS-4), the fourth in the NFHS series, provides information on population, health, and nutrition for India and each state and union territory. For the first time, NFHS-4 provides district-level estimates for many important indicators. All four NFHS surveys have been conducted under the stewardship of the Ministry of Health and Family Welfare (MoHFW), Government of India. MoHFW designated the International Institute for Population Sciences (IIPS), Mumbai, as the nodal agency for the surveys. Funding for NFHS-4 was provided by the United States Agency for International Development (USAID), the United Kingdom Department for International Development (DFID), the Bill and Melinda Gates Foundation (BMGF), UNICEF, UNFPA, the MacArthur Foundation, and the Government of India. Technical assistance for NFHS-4 was provided by ICF, Maryland, USA. Assistance for the HIV component of the survey was provided by the National AIDS Control Organization (NACO) and the National AIDS Research Institute (NARI), Pune.

Four survey questionnaires - household, woman's, man's, and biomarker - were used to collect information in 19 languages using Computer Assisted Personal Interviewing (CAPI). All women age 15-49 and men age 15-54 in the selected sample households were eligible for interviewing. In the household questionnaire, basic information was collected on all usual members of the household and visitors who stayed in the household the previous night, as well as socioeconomic characteristics of the household, water and sanitation, health insurance, and number of deaths in the household in the three years preceding the survey. Two versions of the woman's questionnaire were used in NFHS-4. The first version (district module), which collected information on women's characteristics, marriage, fertility, contraception, reproductive health, children's immunizations, and treatment of childhood illnesses, was fielded in the entire sample of NFHS-4 households. Information on these topics is available at the district, state, and national levels. In the second version of the questionnaire (state module), four additional topics, namely, sexual behaviour, HIV/AIDS, husband's background and women's work, and domestic violence, were also included. This version was fielded in a subsample of NFHS-4 households designed to provide information only at the state and national levels. The man's questionnaire covered the man's characteristics, marriage, number of children, contraception, fertility preferences, nutrition, sexual behaviour, attitudes towards gender roles, HIV / AIDS, and lifestyle. The biomarker questionnaire covered measurements of height, weight, and haemoglobin levels for children; height, weight, haemoglobin, blood pressure, and random blood glucose for women age 15-49 years and men age 15-54 years, and the collection of finger-stick blood for HIV testing in a laboratory. Questionnaire information and biomarkers were collected only with informed consent from the respondents.

The NFHS-4 sample was designed to provide estimates of all key indicators at the national and state levels, as well as estimates for most key indicators at the district level (for all 640 districts in India, as of the 2011 Census). The total sample size of approximately 572,000 households for India was based on the size needed to produce reliable indicator estimates for each district and for urban and rural areas in districts in which the urban population accounted for 30-70 percent of the total district population. The rural sample was selected through a two-stage sample
design with villages as the Primary Sampling Units (PSUs) at the first stage (selected with probability proportional to size), followed by a random selection of 22 households in each PSU at the second stage. In urban areas, there was also a two-stage sample design with Census Enumeration Blocks (CEB) selected at the first stage and a random selection of 22 households in each CEB at the second stage. At the second stage in both urban and rural areas, households were selected after conducting a complete mapping and household listing operation in the selected first-stage units.

The figures of NFHS-4 and earlier rounds may not be strictly comparable due to differences in sample size, and NFHS-4 will be a benchmark for future surveys. NFHS-4 fieldwork for Arunachal Pradesh was conducted in all 16 districts of the state from 12 April to 1 December 2016 by Development \& Research Services Pvt. Ltd. (DRS) and collected information from 14,617 households, 14,294 women age 15-49 (including 2,449 women interviewed in PSUs in the state module), and 2,140 men age 15-54. Survey response rates were 95 percent for households, 93 percent for women, and 89 percent for men.

This report presents the key findings of the NFHS-4 survey in Arunachal Pradesh, followed by detailed tables and an appendix on sampling errors. At the time of finalization of this report, wealth quintiles for the country as a whole were not ready. Therefore, on finalization of the national report, the breakup of key indicators by wealth quintiles for all states will be provided as an additional document and uploaded on the official website of MoHFW and IIPS.

## Household Characteristics

## Household composition

More than one-fourth (26\%) of Arunachal Pradesh's households are in urban areas. On average, households in Arunachal Pradesh are comprised of 4.2 members. Eleven percent of households are headed by women, with 9 percent of the population living in female-headed households.

The largest percentage of households in Arunachal Pradesh have household heads who are Christian ( $41 \%$ ). More than one-fourth ( $26 \%$ ) of household heads are Hindu and 21 percent have household heads from "other" religions.

Almost three-fourths (73\%) of households in Arunachal Pradesh have household heads who belong to a scheduled tribe, 5 percent belong to an other backward class (OBC), and a small proportion (7\%) belong to a scheduled caste. Fifteen percent of household heads do not belong to a scheduled caste, scheduled tribe, or other backward class.

Thirty-two percent of Arunachal Pradesh's population is under age 15; only 3 percent is age 65 and over. The overall sex ratio of the population is only 958 females per 1,000 males, and the sex ratio of the population under seven years of age is even lower ( 936 females per 1,000 males). Seventy-one percent of persons have an Aadhaar card.

Among children below 18 years of age, 7 percent have experienced the death of one or both parents. In all, 84 percent of children below 18 years of age live with both parents, 8 percent live with one parent (mostly with their mother), and the remaining 8 percent live with neither parent. Births of 63 percent of children under five years of age were registered with the civil authorities, and 48 percent of children have a birth certificate.

## Housing characteristics

Less than one-fourth ( $24 \%$ ) of households in Arunachal Pradesh live in a pucca house and 89 percent of all households have electricity. Sixty-one percent of households use an improved sanitation facility that is not shared with other households. Only nine percent of households do not use a sanitation facility, which means that household members practice open defecation, a substantial improvement from 19 percent at the time of NFHS-3. Open defecation is much more common among rural households (12\%) than urban households (1\%).

> Slightly more than half (51\%) of households in Arunachal Pradesh have water piped into their dwelling, yard, or plot.

Eighty-eight percent of households use an improved source of drinking water, but only 51 percent have water piped into their dwelling, yard, or plot. Urban households (68\%) are more
likely than rural households ( $46 \%$ ) to have water piped into their dwelling, yard, or plot. Seventy-six percent of households treat their drinking water to make it potable, mostly by boiling the water ( $62 \%$ ) or using a ceramic, sand, or other water filter ( $28 \%$ ). Less than half of households ( $45 \%$ ) use a clean fuel for cooking.

## Selected household possessions

Almost all (97\%) urban households and 80 percent of rural households in Arunachal Pradesh have a mobile phone. Eighty-three percent of households have a bank or post office account. BPL cards are held by 43 percent of households, up from 28 percent in NFHS-3. Agricultural land is owned by 61 percent of rural households and 25 percent of urban households. Overall, a little over half ( $51 \%$ ) of all households own agricultural land.

## EdUCATION

## School attendance among children

Eighty-eight percent of children age 6-17 years in Arunachal Pradesh attend school ( $90 \%$ in urban areas and $88 \%$ in rural areas). School attendance is almost universal (93\%) at age 6-14 years, and then drops to 78 percent at age $15-17$ years. There is little gender disparity in school attendance in the 6-14 year age group; however, in the age group 16-17 years, 62 percent of girls, compared with 69 percent of boys, are attending school.

## Literacy, educational attainment, and media exposure

In NFHS-4, literate persons are those who have either completed at least standard six or passed a simple literacy test conducted as part of the survey. According to this measure, 66 percent of women age 15-49 and 85 percent of men age 15-49 are literate.

Only 17 percent of women age 15-49 in Arunachal Pradesh have completed 12 or more years of schooling, compared with 27 percent of men.

Thirty-one percent of women and 16 percent of men age 15-49 have never been to school. Only 17 percent of women age 15-49 have completed 12 or more years of education, compared with 27 percent of men.

Sixty-eight percent of women and 78 percent of men watch television at least once a week. Men $(23 \%)$ are almost twice as likely as women (12\%) to read a newspaper or magazine at least once a week. Twenty percent of men and 30 percent of women are not regularly exposed to print media or other forms of media.

## Fertility

## Age at first marriage

The median age at first marriage is 21.4 years among women age $25-49$ years. Twenty-four percent of women age 20-24 years got married before the legal minimum age of 18, down from 42 percent in NFHS-3. Less than one-fourth (23\%) of men age 25-29 years got married before the legal minimum age of 21, down from 31 percent in NFHS-3.

## Fertility levels

The total fertility rate (TFR) in Arunachal Pradesh is 2.1 children per woman, implying that the state has reached replacement level fertility. Fertility decreased by 1.2 children in the 13 years between NFHS-1 and NFHS-3, and has decreased further by 0.9 children in the 10 years between NFHS-3 and NFHS-4.

Fertility in urban areas, at 1.7 children per woman, is well below replacement level and fertility is almost at replacement level even in rural areas ( 2.3 children per woman). Among
 births in the three years preceding the survey, 22 percent were of birth order four or higher, compared with 36 percent in NFHS-3.

There are substantial differentials in fertility by all background characteristics. At current fertility rates, women with no schooling will have 1.6 children more than women who have 12 or more years of schooling (TFR of 3.2, compared with 1.6). All caste/tribe groups have a TFR below the replacement level, except for women who do not belong to a scheduled caste, a scheduled tribe, or an other backward class (who have a TFR of 2.4).

How does fertility vary with schooling? Total fertility rate (children per woman)

## Pregnancy outcome

Ninety-one percent of last pregnancies in the five years preceding the survey ended in a live birth, and the remaining 9 percent terminated in foetal wastage (abortion, miscarriage, or stillbirth). Miscarriage and abortion are the most commonly reported types of foetal wastage, accounting for 4 percent each of all pregnancies. The largest percentage of abortions were performed in the public health sector (38\%), and 32 percent were performed in the private health sector. One out of eight ( $13 \%$ ) women whose pregnancy ended in an abortion reported having complications from the abortion.

## Teenage pregnancy

Among young women age 15-19 in Arunachal Pradesh, 11 percent have already begun childbearing, that is, they have already had a live birth or are pregnant with their first child, down from 15 percent in NFHS-3. One percent of women age 15 years and 4 percent of women age 16 years have started childbearing, but this proportion increases sharply to 13 percent among women age 18 years and 34 percent among women age 19 years. Young women who had no schooling are almost three times as likely to have begun childbearing as young women with 12 or more years of schooling.

## Birth intervals

The median interval between births in the five years before the survey in Arunachal Pradesh is 36.2 months, five months longer than in NFHS-3. Eight percent of births take place within 18 months of the last birth and 20 percent occur within 24 months. Half of births occur within three years of the previous birth. Research shows that waiting at least three years between births reduces the risk of infant mortality.

## Half of births in Arunachal Pradesh occur within three years of the previous birth.

## Fertility preferences

Fifty percent of currently married women and the 54 percent of currently married men want no more children, are already sterilized, or have a spouse who is sterilized. Among those who want another child, 41 percent of women and 46 percent of men would like to wait at least two years before the next birth. Forty-eight percent of women and 51 percent of men consider the ideal family size to be two or fewer children.

In Arunachal Pradesh there is a strong preference for sons. Twenty-seven percent of women and 24 percent of men want more sons than daughters, but only 5 percent of women and men each want more daughters than sons. However, more than 8 in 10 women and men would like to have at least one son and at least one daughter.

Women's desire for more children is strongly affected by their current number of sons. For example, among women with two children, 59 percent with two sons and 58 percent with one son want no more children, compared with only 32 percent with two daughters and no sons. Notably, however, the proportion of currently married women with two children who want no more children irrespective of their number of sons has decreased from 72 percent to 54 percent in the 10 years between NFHS-3 and NFHS-4.

In Arunachal Pradesh, unplanned pregnancies are relatively common. If all women were to have only the number of children they wanted, the total fertility rate would have been considerably below replacement level, at 1.6 children per woman, instead of the current level of 2.1 children per woman.

## Family Planning

## Contraceptive knowledge and use

Knowledge of contraception is almost universal in Arunachal Pradesh. However, some methods are still less well known. About half of currently married women know about male sterilization and 19 percent know about female condoms. Among all women, 43 percent know about emergency contraception. The contraceptive prevalence rate among currently married women age 15-49 is 32 percent, considerably lower than in NFHS-3 (43\%).

Modern method use, at 27 percent, is also down from its level in NFHS-3 (37\%). Notably, the share of female sterilization in contraceptive method use increased from 44 percent in NFHS-1 to 58 percent in NFHS-2 before decreasing to 52 percent in NFHS-3 and further to 35 percent in NFHS-4. Contraceptive use in NFHS-4 increases sharply with age from 18 percent for women age 15-19 to 39 percent for women age 30-39, before decreasing to 30 percent for women age 40-49.

How many women use family planning?
Percentage of currently married women
$\square$ NFHS-1 $\quad$ NFHS-2 $\quad$ NFHS-3 ■NFHS-4

In Arunachal Pradesh, contraceptive use is higher in rural areas ( $33 \%$ ) than in urban areas ( $27 \%$ ). Contraceptive prevalence varies by the level of schooling, but not entirely in the expected direction; 29 percent of currently married women with no schooling use contraception, compared with 20 percent of women with 12 or more years of education. Christian women ( $26 \%$ ) are much less likely to use contraception than Buddhist/Neo-Buddhist or Hindu women ( $43 \%$ each). The use of contraception among scheduled caste women is 24 percent as compared with 45 percent of other backward class women and 49 percent of women not belonging to a scheduled caste, scheduled tribe, or other backward class.

Women in Arunachal Pradesh are much more likely to use contraception if they already have a son. For example, among women with two children, 36 percent with at least one son use a method of family planning, compared with 30 percent of women with two daughters and no sons.

The most common modern methods used by currently married women in Arunachal Pradesh are female sterilization ( $11 \%$ ) and pills ( $10 \%$ ).

What contraceptive methods do women use? Currently married women

Eighty-eight percent of sterilized women had their sterilization operation in the public sector, mainly in a government or municipal hospital or a CHC, rural hospital, or Block PHC. Ninety percent of IUD or PPIUD users had their IUD insertion in the public sector.

The majority of pill and condom users get their supply from the private sector, mainly pharmacies/drugstores. Nonetheless, 24 percent of pill users and 26 percent of condom/Nirodh users get their supply from the public sector.

The 12-month discontinuation rate for all methods is 41 percent. Forty percent of users of modern spacing methods discontinued use within the first year after they adopted the method. The most common reason for discontinuation is the desire to become pregnant.

Forty percent of users of modern spacing methods discontinued use within the first year after they adopted the method.

## Informed choice

Women who know about all available contraceptive methods and their side effects can make better choices about what method to use. Only 60 percent of users of selected modern contraceptive methods were ever told by a health or family planning worker about other methods they could use. Only 51 percent were told about the possible side effects or problems with their method, and even fewer ( $42 \%$ ) were told what to do if they experienced any side effects.

Only 60 percent of users of selected modern contraceptive methods were ever told by a health or family planning worker about other methods they could use.

## Men's attitudes

Twenty-three percent of men age 15-49 in Arunachal Pradesh agree that contraception is women's business and a man should not have to worry about it. Eighteen percent of men agree that women using contraception may become promiscuous. A majority of men (58\%) know that a condom, if used correctly, protects against pregnancy most of the time.

Contraceptive Prevalence Rate by District
Percentage of currently married women

## Unmet need

Unmet need for family planning is defined as the percentage of currently married women who either want to space their next birth or stop childbearing entirely, but are not using contraception. According to this definition, 22 percent of currently married women have an unmet need for family planning, almost the same as in NFHS-3. Currently, 59 percent of the demand for family planning is being satisfied, and 50 percent of the demand is being satisfied by modern methods. The percentage of demand for family planning that is satisfied has decreased to 59 percent from 67 percent in the 10-year period since NFHS-3.

## Infant and Child Mortality

The infant mortality rate in Arunachal Pradesh in NFHS-4 is estimated at 23 deaths before the age of one year per 1,000 live births, lower than the NFHS-3 estimate of 61, the NFHS-2 estimate of 63, and the NFHS-1 estimate of 40 .

Trends in Infant Mortality
Deaths per 1,000 live births

Girls have higher mortality than boys during the neonatal period (in the first month of life), but boys have higher mortality than girls in the postneonatal period and from ages 1 year to 5 years.

High-risk births have higher mortality rates
Deaths in the first year of life per 1,000 live births

Note: Category "Mother's age at birth 40-49" not shown since there are fewer than 250 unweighted person-years of exposure to the risk of death

Children born to mothers under age 20 and age 30-39 are more likely to die during infancy than children born to mothers in the prime childbearing age (20-29 years). Infant mortality is 36 per 1,000 live births for teenage mothers and 24 for mothers age 30-39, compared with 19 for mothers age 20-29. Having children too close together is especially risky. Children born less than two years after a previous birth have a higher infant mortality rate (50 deaths per 1,000 live births) than children whose mothers waited four or more years between births (15 deaths per 1,000 live births).

Infant mortality rates are higher for Hindus than for other religions, and are lower for scheduled tribes than other caste/tribe groups.

All mortality rates are higher in rural than urban areas. The infant mortality rate is much higher for children whose mothers have no schooling ( 31 per 1,000 live births) than for children whose mothers have completed 10 or more years of schooling (10 per 1,000 live births). The infant mortality rate is much higher for fourth and higher order births (39 per 1,000 live births) than lower order births in Arunachal Pradesh (17-20 per 1,000 live births).

Children born less than two years after a previous birth are more than three times as likely to die in infancy as children whose mothers waited for four or more years between births.

## Maternal Health

## Antenatal care

Among mothers who gave birth in the five years preceding the survey, 58 percent received antenatal care (ANC) for their last birth from a skilled health professional $(46 \%$ from a doctor and $13 \%$ from an auxiliary nurse midwife (ANM), lady health visitor (LHV), nurse, or midwife). Forty-one percent did not receive any antenatal care. Among mothers who gave birth in the five years preceding the survey, 65 percent registered the pregnancy for the most recent live birth. Among the registered pregnancies, 89 percent received a Mother and Child Protection Card (MCP Card).

Thirty-seven percent of women received antenatal care during the first trimester of pregnancy, as is recommended. Twenty-seven percent of mothers had four or more antenatal care visits; urban women $(37 \%)$ were more likely to receive four or more antenatal visits than rural women ( $24 \%$ ). The proportion of women who received their first antenatal care visit in the first trimester of pregnancy for their last births increased from 24 percent to 37 percent in the 10 years between NFHS-3 and NFHS-4. For their last births, 64 percent of mothers received iron and folic acid
(IFA) supplements during pregnancy, but only 8 percent consumed them for the recommended 100 days or more. Sixty-four percent of last births were protected against neonatal tetanus through tetanus toxoid vaccinations given to the mother. Twelve percent of mothers took an intestinal parasite drug during pregnancy.

Only 8 percent of mothers in Arunachal Pradesh consumed iron and folic acid supplements for the recommended 100 days or more during pregnancy for their last birth.

Among women with a live birth in the five years preceding the survey who met with a community health worker in the last three months of pregnancy for their most recent live birth, more than half received advice on each of five different areas ( $61 \%$ received advice on the importance of institutional delivery, $60 \%$ on breastfeeding, $58 \%$ on keeping the baby warm, $54 \%$ on family planning, and $48 \%$ on cord care).

Even when women receive antenatal care, sometimes they do not receive all the services needed to monitor their pregnancy. In Arunachal Pradesh, more than 80 percent of women who received antenatal care for their last birth received each of the services needed to monitor their pregnancy: having their weight taken and their blood pressure measured ( $95 \%$ each), having urine ( $84 \%$ ) and blood samples taken ( $83 \%$ ), and having their abdomen examined (79\%).

An ultrasound test was performed during 50 percent of pregnancies in the five years preceding the survey. Women with at least 12 years of schooling ( $84 \%$ ) were much more likely to have an ultrasound test than women with no schooling (28\%).

## Delivery care

Slightly more than half of births ( $52 \%$ ) take place in a health facility ( $43 \%$ in public sector health facilities and $10 \%$ in private sector health facilities, including NGO/ trust facilities). The percentage of births in a health facility increased in the 10 years between NFHS-3 and NFHS-4, from 29 percent to 52 percent, but almost half of women $(47 \%)$ still give birth at home. Institutional births are most common in urban areas ( $82 \%$ ), among women who have had four or more antenatal care visits ( $82 \%$ ), and women with 12 or more years of
 schooling ( $88 \%$ ).

For 80 percent of home births, a clean blade was used to cut the cord, as is recommended. A disposable delivery kit was used for 31 percent of deliveries. Seventy-one percent of home births followed the recommendation that the baby be immediately wiped dry and then wrapped without being bathed first.

Fifty-four percent of births during the past five years took place with assistance from a skilled provider and 14 percent were delivered by a traditional birth attendant. Three out of every 10 births were delivered with the assistance of friends/relatives.

Nine percent of births during the past five years were delivered by caesarean section. More than one-third ( $37 \%$ ) of caesarean sections ( $3 \%$ of all births) were emergency caesarean sections. One in every five births to women in urban areas were delivered by caesarean section.

Among women who had a live birth in the five years preceding the survey that was delivered in a health facility, 21 percent received financial assistance under Janani Suraksha Yojana (JSY) for their most recent birth in a health facility. Rural women were almost twice as likely as urban women to receive financial assistance under JSY. Only 11 percent of scheduled caste women received financial assistance under JSY, compared with 30 percent of women not belonging to scheduled castes, scheduled tribes, or other backward classes.

One in every five births to women in urban areas were delivered by caesarean section.

Institutional Delivery by District
Percentage of births in the past five years

## Postnatal care

Early postnatal care for a mother helps safeguard her health and can reduce maternal mortality. In Arunachal Pradesh, 40 percent of mothers had a postnatal check after their last birth and 30 percent of mothers had a postnatal check within two days of the birth, as is recommended. Postnatal care is most common following births in a health facility; 50 percent of births in public health facilities and 53 percent of births in private health facilities were followed by a postnatal check for the mother within two days of birth, compared with only 5 percent of home births.

Only 10 percent of last births in the five years preceding the survey received a health check in the first two days after birth. Even fewer newborns delivered at home (4\%) received a health check in the first two days after birth.

## Male involvement in maternal care

Seventy-nine percent of men with a child under three years of age said that the youngest child's mother received antenatal care. Almost two-thirds men with a child under three years said they were present during at least one antenatal check-up received by the child's mother $(82 \%$ in urban areas and $59 \%$ in rural areas), but only 47 percent were told by a health provider or health worker what to do if the mother had a pregnancy complication. Only 45-59 percent of men were told about the signs of specific pregnancy complications (convulsions, vaginal bleeding, prolonged labour, high blood pressure, and severe abdominal pain).

More than half of fathers with a child less than three years of age were given information about various aspects of maternal care. Sixty-three percent were told about the importance of proper nutrition for the mother during pregnancy, 61 percent were told about the importance of delivering the baby in a health facility, and 55 percent were told about family planning. Only 37 percent of fathers whose child was not delivered in a health facility were told about the importance of cord care, 51 percent were told about the importance of keeping the baby warm immediately after birth, and 42 percent were told about the importance of breastfeeding the baby immediately after delivery.

## Child Health

## Vaccination of children

Less than two-fifths ( $38 \%$ ) of children age 12-23 months received all basic vaccinations against six major childhood illnesses (tuberculosis, diphtheria, pertussis, tetanus, polio, and measles) at any time before the survey. However, 80 percent of children are at least partially vaccinated; 20 percent did not receive any vaccinations at all.

Seventy-one percent of children have received a BCG vaccination. However, lower percentages have received other basic vaccinations ( $54 \%$ have received at least the recommended three doses of polio vaccine, $52 \%$ have received the three recommended doses of DPT vaccine, and $55 \%$ have been vaccinated against measles). There is considerable dropout between the first and third doses of DPT vaccine (from $68 \%$ to $52 \%$ ) and polio vaccine (from $75 \%$ to $54 \%$ ).

Trends in Vaccination Coverage
Percentage of children 12-23 months receiving vaccinations

Between NFHS-3 and NFHS-4, there was an increase in vaccination coverage for three doses of DPT (from $39 \%$ to $52 \%$ ) measles ( $38 \%$ to $55 \%$ ), and BCG (from 58\% to 71\%), but coverage for the third dose of polio vaccine declined from 56 percent to 54 percent. Overall, there was an improvement in the coverage of all basic vaccinations (from $28 \%$ to $38 \%$ ). In addition, 41 percent of children have received all three recommended doses of hepatitis $B$ vaccine.

Coverage with all basic vaccinations is particularly low for Christian children (29\%), children from scheduled castes (29\%) and scheduled tribes (33\%), children with no schooling (24\%), and children of birth order 4-5 (20\%). There

Coverage of All Basic Vaccinations by District
Percentage of children 12-23 months

Note: Percentage not shown for Upper Siang district since there are fewer than 25 unweighted cases. is almost no difference in coverage with all basic vaccinations by the sex of the child. Children in urban areas ( $44 \%$ ) are somewhat more likely than children in rural areas $(36 \%)$ to have received all basic vaccinations.

## Coverage with all basic vaccinations is particularly low for children of birth order 4-5 and children whose mothers have no schooling.

## Childhood illnesses

In the two weeks before the survey, 2 percent of children under age five years had symptoms of an acute respiratory infection (cough accompanied by (1) short, rapid breathing that is chest related and/or (2) difficult breathing that is chest related). Of these children, Fifty-one percent were taken to a health facility or health provider for treatment.

Eleven percent of children under age five were reported to have had fever in the two weeks preceding the survey; 37 percent of these children were taken to a health facility or provider for treatment.

Overall, 7 percent of children under age five years had diarrhoea in the two weeks preceding the survey. Forty-five percent of these children were taken to a health facility or health provider. Eighty-one percent of mothers of young children have heard of oral rehydration salt (ORS) packets for the treatment of diarrhoea, but only 66 percent of children with diarrhoea
were given ORS. Forty percent of children with diarrhoea were given gruel and nearly three-fourths (74\%) were given some type of oral rehydration therapy (ORT). Thirty-six percent were given zinc supplements. Antibiotic drugs were administered to 22 percent of children with diarrhoea. Seventeen percent of children with diarrhoea did not receive any type of treatment at all.

To reduce dehydration and minimise the effects of diarrhoea on nutritional status, it is recommended that normal feeding of children be continued when they have diarrhoea and that the amount of fluids given should be increased. However, in Arunachal Pradesh only 11 percent of children with diarrhoea received more to drink than normal. Only about one-fourth ( $26 \%$ ) of children received the same amount to drink as usual. Of greater concern, 57 percent of children with diarrhoea were given less to drink or nothing at all to drink. Only 36 percent of children with diarrhoea were given the same amount of food or more food, as recommended.

## Integrated Child Development Services (ICDS)

The ICDS programme provides nutrition and health services for children under age six years and pregnant or breastfeeding women, as well as preschool activities for children age 3-5 years. These services are provided through community-based anganwadi centres.

```
How many children received anganwadi centre services?
Percentage of age-eligible children receiving services
```

Only one-fifth of children under 6 years receive some kind of services from an anganwadi centre. The most common services that age-eligible children receive are supplementary food (19\%), growth monitoring (10\%), health check-ups (10\%), and immunizations (6\%). Forty-three percent of the mothers of children who were weighed at an anganwadi centre received counselling from an anganzwadi worker or an ANM. Among children under 6 years, only 13 percent of their mothers received some benefits from an anganwadi centre during pregnancy, and 15 percent received some service while breastfeeding. Only six percent of breastfeeding mothers received health and nutrition education from these centres.

## Breastfeeding, Nutrition, and Anaemia

## Infant feeding

Although breastfeeding is nearly universal in Arunachal Pradesh, only 58 percent of children under 6 months are exclusively breastfed, as the World Health Organization (WHO) recommends. Eighty-three percent were put to the breast within the first day of life, but only 61 percent started breastfeeding in the first hour of life (as recommended). While the initiation of breastfeeding within one hour of birth shows a slight improvement since NFHS-3, almost two-fifths ( $39 \%$ ) of infants are still deprived of the highly nutritious first milk (colostrum) and the antibodies it contains.

It is recommended that nothing be given to children other than breastmilk even in the first three days when the milk has not begun to flow regularly, because prelacteal feeds limit the frequency of suckling by the infant and expose the baby to the risk of infection. However, almost one-fifth (19\%) of children are given something other than breastmilk during the first three days. Overall, 87 percent of children continue breastfeeding at 1 year and 83 percent continue breastfeeding after two years. The median duration of breastfeeding is 31.0 months, which is the age to which half of children are breastfed.

After the first 6 months, breastmilk is no longer enough to meet the nutritional needs of infants. Therefore, complementary foods should be added to the diet of the child. However, at age 6-8 months only 54 percent of children receive breastmilk and complementary foods.

WHO has several recommendations for infant and young child feeding (IYCF) practices for children age 6-23 months. The key IYCF indicators measure the adequacy of dietary diversity and meal frequency for breastfed and nonbreastfed children. Less than one-third (29\%) of children age 6-23 months are fed the recommended minimum number of times per day and only 36 percent are fed from the appropriate number of food groups. Only 14 percent are fed according to all three recommended practices.

Micronutrient deficiency is a major contributor to childhood morbidity and mortality. Vitamin A is an essential nutrient for the immune system. Severe vitamin A deficiency (VAD) can cause eye damage and a higher risk of dying from measles and diarrhoeal disease. The Government of India recommends that children under 5 years of age receive vitamin A supplements every six months, starting at age 9 months. In Arunachal Pradesh, 40 percent of children age 9-59 months were given a vitamin A supplement in the past six months (up from $16 \%$ in NFHS-3), and 66 percent of children age 9-23 months ate vitamin A-rich foods during the day or night before the survey.

Iron deficiency is a primary cause of anaemia. Eating foods rich in iron and taking iron supplements can help prevent anaemia. Only 47 percent of children age 9-23 months ate iron-rich foods during the day or night before the survey (up from $30 \%$ in NFHS-3), but 21 percent of children age 6-59 months were given iron supplements in the week before the survey (up from $4 \%$ in NFHS-3).

## Children's nutritional status

Twenty-nine percent of children under age five years are stunted, or too short for their age, which indicates that they have been undernourished for some time. Seventeen percent are wasted, or too thin for their height, which may result from inadequate recent food intake or a recent illness causing weight loss, and 8 percent are severely wasted. Nineteen percent are underweight, which takes into account both chronic and acute undernutrition. Five percent of children are overweight. Even during the first six months of life, when almost all babies are breastfed, 15 percent of children are stunted, 16 percent are underweight, and 24 percent are wasted.

Children's nutritional status in Arunachal Pradesh has improved substantially since NFHS-3 by some measures, but not by all measures. Stunting decreased from 43 percent to 29 percent in the 10 years between NFHS-3 and NFHS-4, and the percentage of children who are underweight decreased from 33 percent to 19 percent. However, in the same period, wasting increased slightly (from 15\% to $17 \%$ ). Despite the improvements in stunting and underweight, child malnutrition is still a major problem in Arunachal Pradesh.

The level of undernutrition is lower among

Note: Nutritional status estimates are based on the 2006 WHO International Reference Population children in urban areas than rural areas. Interestingly, girls are doing slightly better than boys on all the indicators of malnutrition. The differences in nutritional status are pronounced for all other background characteristics. Undernutrition generally decreases with increasing mother's schooling, better nutritional status of the mother, and larger child's size at birth. The level of undernutrition is relatively high for Christian children and children of higher birth orders.

## Adults' nutritional status

More than one-fourth ( $27 \%$ ) of women and 29 percent of men are either too thin or overweight or obese. Women and men are more than twice as likely to be overweight or obese as thin, which is the opposite of the pattern in NFHS-3. Nine percent of women and 8 percent of men are too thin, and 19 percent of women and 21 percent of men are overweight or obese. Less than three-fourths of women and men are at a healthy weight for their height.

Undernutrition is particularly common in the younger age groups and among other backward classes and those who do not belong to scheduled castes, scheduled tribes, or other backward classes. Overweight and obesity are most prevalent in older adults, those in urban areas, and those with 12 or more years of schooling.

The use of iodized salt prevents iodine deficiency, which can lead to miscarriage, goitre, and mental retardation. Almost all (99\%) of Arunachal Pradesh's households were using iodized salt at the time of the survey, which was the same as in NFHS-3.

## Anaemia

Anaemia is a condition that is marked by low levels of haemoglobin in the blood. Iron deficiency is estimated to be responsible for about half of all anaemia globally, but anaemia can also be caused by malaria, hookworm and other helminths, other nutritional deficiencies, chronic infections, and genetic conditions. Anaemia can result in maternal mortality, weakness, diminished physical and mental capacity, increased morbidity from infectious diseases, perinatal mortality, premature delivery, low birth weight, and (in children) impaired cognitive performance, motor development, and scholastic achievement. Anaemia is a major health problem in Arunachal Pradesh, especially among women and children.

More than half ( $51 \%$ ) of children between the ages of 6 and 59 months are anaemic. This includes 30 percent who are mildly anaemic, 21 percent who are moderately anaemic, and 1 percent who suffer from severe anaemia. Anaemia decreases steadily from 73 percent in children age 6-11 months to 38 percent among children age 48-59 months. Although anaemia levels vary somewhat according to other background characteristics, anaemia among children is widespread in every group. Almost half of children are anaemic even if their mother has 10 or more years of schooling.

Forty percent of women in Arunachal Pradesh have anaemia, including 32 percent with mild anaemia, 8 percent with moderate anaemia, and 1 percent with severe anaemia. Anaemia is particularly high for women who are breastfeeding, but anaemia exceeds 35 percent for every group of women except those who are pregnant and those belonging to "other" religions. One-sixth ( $17 \%$ ) of men are anaemic. Men under age 20 and above age 40 are particularly likely to be anaemic.

Anemia among women, men, and children
 The proportion of both women and men having anaemia is particularly high among other backward classes and those who do not belong to scheduled castes, scheduled tribes, or other backward classes.

## Adult Health and Health Care

## Tuberculosis

In Arunachal Pradesh, 799 persons per 100,000 are estimated to have medically treated tuberculosis, based on reports from household respondents. The prevalence of medically treated tuberculosis is higher among men (970) than among women (619).

Eighty-seven percent of women and 85 percent of men have heard of tuberculosis, but even among those who have heard of tuberculosis, only 59 percent of women and 74 percent of men know that it is spread through the air by coughing or sneezing. About half of women and 60 percent of men have misconceptions about how tuberculosis is spread. Overall, 81 percent of women and 89 percent of men know that tuberculosis can be cured, and only 8 percent of women and 23 percent of men say that if a family member had tuberculosis, they would want to keep it a secret.

## Diabetes, asthma, goitre, heart disease, and cancer

According to self-reports, 1,184 women age 15-49 and 1,155 men age 15-49 per 100,000 have diabetes. Overall, 1,195 women and 297 men per 100,000 have asthma. The prevalence of asthma among women is higher among older age groups and those who have no schooling. Goitre or any other thyroid disorder is somewhat less common than asthma among women ( 933 per 100,000 women) and equally common among men. The prevalence of any heart disease is much higher among women ( 1,403 per 100,000 ) than among men ( 812 per 100,000 ). Among the five diseases, cancer is the least common, with 122 women per 100,000 and 171 men per 100,000 reportedly suffering from cancer.

## Blood pressure (hypertension)

Seventeen percent of women age 15-49 in Arunachal Pradesh have hypertension, including 10 percent with Stage 1 hypertension, 3 percent with Stage 2 hypertension, and 2 percent with Stage 3 hypertension. A little less than half ( $49 \%$ ) of women have normal blood pressure, including 1 percent of women with normal blood pressure who are taking medicine to lower their blood pressure. The prevalence of hypertension among men age 15-49 is somewhat higher than among women. Twenty-three percent of men in Arunachal Pradesh have hypertension, including 16 percent with Stage 1 hypertension, 4 percent with Stage 2 hypertension, and 2 percent with Stage 3 hypertension. Twenty-nine percent of men have normal blood pressure, including 0.2 percent of men with normal blood pressure who are taking medicine to lower their blood pressure. For both women and men, hypertension tends to increase substantially with age.

## Blood glucose

NFHS-4 included measurement of random blood glucose among women age 15-49 and men age 15-54. Three percent of women age 15-49 in Arunachal Pradesh have high blood glucose levels, and an additional 2 percent have very high blood glucose levels. In comparison, 4 percent and 3 percent of men age 15-49 have high and very high blood glucose levels. Older women and men, and men with no schooling have relatively high blood glucose levels.

## Health examinations

In Arunachal Pradesh, only 9 percent of women have ever undergone an examination of the cervix, 6 percent have ever undergone a breast examination, and 18 percent have ever undergone an examination of the oral cavity.

## Tobacco and alcohol use

Sixty percent of men and 18 percent of women age 15-49 use some form of tobacco. Men are much more likely to smoke cigarettes ( $33 \%$ ) than to use other types of tobacco. About one out of every five men use gutkha or paan masala with tobacco ( $21 \%$ ), use khaini $(21 \%)$, or smoke bidis (18\%). Women are most likely to chew paan with tobacco ( $8 \%$ ) or to use gutkha or paan masala with tobacco (6\%). Among men and women, the use of any form of tobacco is higher in rural areas than in urban areas. Most men who smoke cigarettes or bidis smoked 5 or fewer cigarettes or bidis in the past 24 hours. Men are equally likely to drink alcohol (59\%) as to use tobacco, and more than one-fourth $(26 \%)$ of women say that they drink alcohol. Among men who drink alcohol, more than three-fourths (77\%) drink alcohol at least once a week.

## Source of health care

The public health sector is the main source of health care for 88 percent of households. Household members are most likely to go to government or municipal hospitals (47\%) and community health centres, rural hospitals, or Block Primary Health Centres (21\%) when they get sick.

## Health insurance

Fifty-eight percent of households in Arunachal Pradesh have any kind of health insurance that covers at least one member of the household. Health insurance coverage is somewhat more common in rural areas $(60 \%$ ) than in urban areas ( $54 \%$ ). Ninety-three percent of the households that are covered by health insurance are covered by the State Health Insurance Scheme (93\%).

Half of women and men age 15-49 years in Arunachal Pradesh are covered by any health scheme or health insurance.

## HIV/AIDS

## Awareness of HIV or AIDS

Seventy-eight percent of women in Arunachal Pradesh have heard of HIV or AIDS. In urban areas, 90 percent know about HIV or AIDS, compared with 74 percent in rural areas. Young women age 15-24 years are more likely ( $85 \%$ ) than older women age 40-49 ( $67 \%$ ) to have heard of HIV or AIDS. Women having no schooling ( $59 \%$ ) and women who are widowed, divorced, separated, or deserted (56\%) are least likely to have heard of HIV or AIDS.

Men are much more likely than women to know about HIV or AIDS. Eighty-seven percent of men in Arunachal Pradesh have heard of HIV or AIDS, including 97 percent in urban areas.

## Knowledge of prevention and transmission

Men are much more likely than women to know how HIV is transmitted and how to keep from getting it. For example, only 45 percent of women know that consistent condom use can help prevent HIV/AIDS, compared with 64 percent of men, and 44 percent of women know that having just one uninfected partner who has no other partners can reduce the chance of getting HIV/AIDS, compared with 62 percent of men.

Only 16 percent of women and 27 percent of men in Arunachal Pradesh have 'comprehensive knowledge' about HIV/AIDS. This means they know that consistent use of condoms every time they have sex and having just one uninfected sex partner who has no other partners can reduce the chance of getting HIV/AIDS, they know that a healthy looking person can have HIV/ AIDS, and they reject two common misconceptions about transmission or prevention of HIV/AIDS.

## HIV-related stigma

Almost two-thirds (65\%) of women and three-fourths (74\%) of men in Arunachal Pradesh would be willing to take care of a relative with HIV/AIDS in their home. A similar proportion of women $(68 \%)$ and men $(75 \%)$ say that a female teacher who has HIV/AIDS but is not sick should be allowed to continue teaching. More than half ( $52 \%$ ) of women and 65 percent of men say that they would buy fresh vegetables from a shopkeeper with HIV/AIDS. Fifty-seven percent of women and 61 percent of men say that if a family member got infected with HIV/AIDS, they would not want to keep it a secret.

## HIV testing prior to NFHS-4, blood transfusions, and safe injections

Only 14 percent of women and 13 percent of men age 15-49 had ever been tested for HIV prior to NFHS-4. Women and men in urban areas are much more likely than rural women and men to have ever been tested for HIV prior to NFHS-4. Almost one-sixth ( $16 \%$ ) of women who had a live birth in the past five years and received ANC during pregnancy were tested for HIV during ANC. Urban women (19\%) are slightly more likely than rural women (16\%) to have been tested for HIV during ANC.

## Almost one-sixth (16\%) of women who had a live birth in the past five years and received ANC during pregnancy were tested for HIV during ANC.

In Arunachal Pradesh, men (12\%) are somewhat more likely than women (7\%) to have ever had a blood transfusion. Women are slightly more likely than men to have received an injection in the past 12 months ( $26 \%$ of women, compared with $24 \%$ of men).

For almost nine-tenths of adults who received an injection in the past 12 months, a disposable syringe was used.

## Sexual Behaviour

NFHS-4 included questions on respondents' sexual behaviour. Respondents were asked about their age at first sex, their current and previous sexual partners, higher-risk intercourse, and condom use. In addition, men were asked whether they had paid for sex in the past year. These questions are sensitive and subject to reporting bias, so the results should be interpreted with caution.

## Higher-risk behaviour

Higher-risk sex is sexual intercourse with someone who is neither a spouse nor a cohabiting partner. Among those who had sex in the past 12 months, 3 percent of women and 16 percent of men reported having had higher-risk sex during the past 12 months. The percentage of men
who had higher-risk sexual intercourse in the past 12 months is more than twice as high in urban areas as in rural areas. Even fewer respondents said that they had multiple sex partners and higher-risk sexual intercourse in the past 12 months ( $0.2 \%$ of women and $5 \%$ of men).

Only 42 percent of men who had higher-risk sex in the past 12 months reported using a condom the last time they had higher-risk sex.

Two percent of men said they had paid for sex in the past year. About half ( $47 \%$ ) of the men who paid for sexual intercourse in the past 12 months used a condom the last time they paid for sexual intercourse.

## Women's Empowerment

## Women's hygiene

Using a hygienic method of menstrual protection is important for women's health and personal hygiene. In NFHS-4, young women age 15-24 were asked what method or methods they use for menstrual protection, if anything. In Arunachal Pradesh, 63 percent use sanitary napkins, 45 percent use cloth, 13 percent use locally prepared napkins, and less than 1 percent use tampons. Overall, 73 percent of women age 15-24 use a hygienic method of menstrual protection. Women with at least 10 years of schooling are much more likely to be using a hygienic method than women with no schooling or less than five years of schooling. Among the caste/tribe groups, use of a hygienic method of menstrual protection is lowest among women belonging to scheduled castes ( $62 \%$ ).

## Employment and earnings

Only 34 percent of all women age 15-49 were employed in the 12 months preceding the survey; in the same period, 74 percent of all men age 15-49 were employed. Among employed women, 51 percent earned cash, including 10 percent whose earnings were both in cash and in-kind, and 47 percent were not paid at all. More than three-fourths ( $77 \%$ ) of men who were employed earned cash and only 16 percent were not paid at all. Forty-seven percent of employed women worked in non-agricultural occupations, compared with 53 percent of employed men.

## Only 34 percent of all women age 15-49 were employed in the 12 months preceding the survey.

Among currently married women who work and are paid in cash, 89 percent decide how their earnings will be used, either alone or jointly with their husbands. Almost half ( $45 \%$ ) of women who work for cash say that they earn more or about the same as their husbands. Seventy-eight percent of currently married men whose wives have cash earnings report that they alone or jointly with their wives decide how her earnings are used and 33 percent of men who have cash
earnings and whose wives have cash earnings say that their wife earns more or about the same as them.

## Decision making

Currently married women were asked who makes decisions about their own health care, major household purchases, and visits to their own family or relatives. Women are almost equally likely to participate in decisions about their own health care as in decisions about major household purchases and visits to their own family and relatives ( $83-85 \%$ ). Overall, 77 percent of currently married women participate in making all three of these decisions, and 11 percent do not participate in making any of the three decisions. Participation in all three decisions varies most by age, increasing from 65 percent among women age 15-19 to 80 percent among women age 40-49.

Currently married men were also asked who makes decisions about their own health care and major household purchases. Men were more likely than women to report that they alone or jointly with their wife participated in both these decisions: 86 percent participated in making decisions about their own health care and 93 percent participated in decisions about major household purchases.

## Other indicators of women's empowerment

Forty-one percent of women have some money that they can decide how to use. The proportion of women with money which they control increases sharply with age, and is highest among women who are employed for cash ( $63 \%$ ) and women with 12 or more years of education (55\%) than any other group of women. However, this proportion is the same among women in urban and rural areas ( $41 \%$ ).

## More than half (57\%) of women have a bank or savings account that they themselves use.

More than half ( $57 \%$ ) of women have a bank or savings account that they themselves use. This percentage is highest, at 86 percent, among women who have 12 or more years of schooling. Women's knowledge and use of microcredit programmes is very limited. Twenty-two percent of women know of a microcredit programme in the area, but only 4 percent have ever taken a loan from a microcredit programme.

Only 38 percent of women are allowed to go by themselves to all three of the following places: the market, a health facility, and places outside the village/community. The highest proportion of women allowed to go to all three places alone are employed women who earn cash and women who have 12 or more years of schooling.

## Ownership of assets

Fifty-nine percent of women and 80 percent of men own a house alone or jointly with someone else, and 50 percent of women and 77 percent of men own land alone or jointly with someone else. Ownership of land is more common in rural than urban areas for both women and men; however, ownership of a house is more common among women in urban than rural areas. More men own a house in rural areas (83\%) than in urban areas (72\%).

Fifty-nine percent of women own a house alone or jointly with someone else, and 50 percent of women own land alone or jointly with someone else.

Sixty percent of women have a mobile phone that they themselves use, and among women who have a mobile phone that they themselves use, three in four ( $75 \%$ ) can read SMS messages. Eighty-two percent of urban women have a mobile phone they themselves use, compared with 52 percent of rural women.

## Sixty percent of women have a mobile phone that they themselves use.

## Gender-role attitudes

Slightly more than half of women believe it is justifiable for a husband to beat his wife under some circumstances. Women are most likely to believe that wife beating is justified if a woman shows disrespect for her in-laws (36\%), followed by if she neglects the house or children ( $33 \%$ ), and if her husband suspects her of being unfaithful ( $21 \%$ ). Men are slightly less likely to agree: 41 percent say that wife beating is justified in some circumstances, especially if the wife shows disrespect for in-laws ( $31 \%$ ) or if the husband suspects his wife is unfaithful ( $24 \%$ ). Even among women and men who have completed at least 12 years of schooling, 57 percent of women and 42 percent of men say that a husband is justified in beating his wife for one or more of the specified reasons.

Half of women and men each believe that a woman is justified in refusing to have sex with her husband if she knows he has a sexually transmitted disease, if she knows he has intercourse with other women, and if she is tired or not in the mood. Two-thirds of men agree that when a wife refuses to have sex with her husband, he does not have the right to get angry and reprimand her, to refuse to give her financial support, to use force to have sex even if she doesn't want to, or to have sex with another woman.

## Domestic Violence

Among women age 15-49, 27 percent have ever experienced physical violence and 7 percent have ever experienced sexual violence. In all, 29 percent of women in Arunachal Pradesh have experienced physical or sexual violence. Among those who experienced physical violence since age 15 , the most common perpetrator for ever-married women was the husband (95\%), and for never-married women, it was a mother/step-mother, father/step-father, or sister/brother.

## Twenty-nine percent of women age 15-49 in Arunachal Pradesh have experienced physical or sexual violence.

## Violence during pregnancy

Two percent of women who have ever been pregnant have ever experienced physical violence during one or more of their pregnancies.

## Spousal violence

Twenty-two percent of ever-married women report having been slapped by their husband; 8-15 percent report being pushed, shaken, or having something thrown at them; having their arm twisted or hair pulled; being punched; or being kicked, dragged, or beaten up. Two percent each experienced being choked or burned on purpose or being threatened or attacked with a knife, gun, or any other weapon. Seven percent report that their husbands have physically forced them to have sex even when they did not want to, and 5 percent report that their husband forced them with threats or other ways to perform sexual acts they did not want to perform. Overall, 31 percent of ever-married women have experienced spousal physical or sexual violence from their current husband or, if not currently married, from their most recent husband. Sixteen percent report spousal emotional violence. Few ever-married women (7\%) have ever initiated violence against their husband.

Although the prevalence of spousal violence is higher among women with no schooling, more than 1 in $4(27 \%)$ women who have at least 12 years of schooling have experienced physical or sexual spousal violence. The contextual and intergenerational aspects of spousal violence are clear from the fact that women whose mothers were beaten by their fathers are twice as likely to be in abusive marriages themselves. Women whose husbands consume alcohol are much more likely than women whose husbands do not

Is alcohol use related to spousal physical or sexual violence?
Percentage of currently married women experiencing violence

Note: Category "Husband drinks, but never gets drunk" not shown since there are fewer than 25 unweighted cases.
consume alcohol to experience spousal violence, especially if the husband often gets drunk. However, 22 percent of even women whose husbands do not drink alcohol have experienced physical or sexual spousal violence.

More than one-fifth ( $21 \%$ ) of women who have experienced spousal physical or sexual violence have suffered injuries as a result of the violence, and among women who have experienced both physical and sexual violence this proportion rises to 29 percent. The most common type of injury is cuts, bruises, or aches.

## Help seeking

Only 9 percent of women who have ever experienced physical or sexual violence by anyone have sought help. Over three-fourths ( $78 \%$ ) of women have neither sought help nor told anyone about the violence. Abused women who have sought help most often seek help from their own families or from friends. Only 2 percent of abused women who sought help for the violence sought help from the police.

Table 1 Results of the household and individual interviews
Number of households, number of interviews with women and men, and response rates, according to residence, Arunachal Pradesh, 2015-16

| Result | Residence |  | Total |

na $=$ Not applicable
${ }^{1}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted, or fostered) with or without unrelated individual.
${ }^{2}$ Protected dug well, protected spring, rainwater, community RO plant
${ }^{3}$ Surface water, unprotected dug well, unprotected spring, cart with small tank, tanker truck, bottled water
${ }^{4}$ Total may add to more than 100.0 because households may use more than one method of purification
${ }^{5}$ Appropriate water treatment methods include boiling, bleaching, filtering, and electronic purifying
${ }^{6}$ Includes ventilated improved pit (VIP)/biogas latrine and twin pit/composting toilet
${ }^{7}$ Facilities that would be considered improved if they were not shared by two or more households
${ }^{8}$ Includes dry toilet
${ }^{9}$ Houses made from mud, thatch, or other low-quality materials are called kachha houses, houses that use partly low-quality and partly high-quality materials are called semi-pucca houses, and houses made with high quality materials throughout, including the floor, roof, and exterior walls, are called pucca houses.
${ }^{10}$ Electricity, LPG/natural gas, or biogas
${ }^{11}$ Includes coal/lignite, charcoal, wood, straw/shrubs/grass, agricultural crop waste, and dung cakes
${ }^{12}$ Frequency of smoking by anyone inside the house

Table 5 Household possessions and land ownership
Percentage of urban, rural, and total households and de jure population possessing various household goods, means of transport, agricultural land, a house, and farm animals and having a bank/post office account, health scheme/health insurance, a BPL card, and a long-lasting insecticide-treated (LLIN) mosquito net, Arunachal Pradesh, 2015-16

| Household possessions | Urban | Rural | Total | De Jure population |
| :---: | :---: | :---: | :---: | :---: |
| Household goods |  |  |  |  |
| Mattress | 86.5 | 70.5 | 74.7 | 74.8 |
| Pressure cooker | 93.4 | 56.7 | 66.3 | 65.4 |
| Chair | 94.2 | 70.4 | 76.6 | 77.1 |
| Cot or bed | 93.6 | 74.8 | 79.7 | 80.3 |
| Table | 94.2 | 70.7 | 76.8 | 77.6 |
| Electric fan | 82.5 | 43.1 | 53.4 | 53.8 |
| Radio or transistor | 4.5 | 5.7 | 5.4 | 5.5 |
| Television (black and white) | 1.3 | 1.9 | 1.8 | 2.0 |
| Television (colour) | 85.2 | 58.9 | 65.7 | 67.9 |
| Any television | 85.5 | 59.9 | 66.5 | 68.8 |
| Sewing machine | 8.4 | 3.3 | 4.7 | 5.1 |
| Mobile telephone | 96.6 | 79.8 | 84.2 | 86.0 |
| Landline telephone | 3.0 | 1.3 | 1.7 | 1.9 |
| Internet | 31.9 | 11.0 | 16.5 | 17.0 |
| Computer | 21.4 | 4.6 | 9.0 | 9.0 |
| Refrigerator | 42.0 | 13.5 | 20.9 | 22.2 |
| Air conditioner/cooler | 2.8 | 0.7 | 1.2 | 1.3 |
| Washing machine | 10.9 | 3.2 | 5.2 | 5.3 |
| Watch or clock | 76.7 | 63.4 | 66.9 | 69.1 |
| Water pump | 1.7 | 2.0 | 1.9 | 2.1 |
| Thresher | 0.1 | 0.4 | 0.3 | 0.4 |
| Tractor | 0.7 | 1.2 | 1.1 | 1.2 |
| None of the above | 0.2 | 5.1 | 3.8 | 3.2 |
| Means of transport |  |  |  |  |
| Bicycle | 15.1 | 22.9 | 20.8 | 23.8 |
| Motorcycle or scooter | 36.9 | 26.5 | 29.2 | 31.2 |
| Animal-drawn cart | 0.2 | 0.9 | 0.7 | 0.9 |
| Car | 23.5 | 10.3 | 13.7 | 15.1 |
| None of the above | 41.9 | 52.4 | 49.6 | 45.8 |
| Agricultural land |  |  |  |  |
| No agricultural land | 74.6 | 39.4 | 48.6 | 44.5 |
| Agricultural land | 25.4 | 60.6 | 51.4 | 55.5 |
| Irrigated land only | 5.5 | 13.1 | 11.1 | 11.9 |
| Non-irrigated land only | 8.7 | 25.6 | 21.2 | 24.2 |
| Both irrigated and non-irrigated land | 4.4 | 10.1 | 8.6 | 9.0 |
| Irrigation not determined | 6.8 | 11.9 | 10.5 | 10.5 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 |
| Percentage owning a house | 47.1 | 70.7 | 64.6 | 67.8 |
| Percentage owning farm animals ${ }^{1}$ | 22.8 | 68.3 | 56.4 | 61.0 |
| Percentage having a bank account/post office account ${ }^{2}$ | 92.1 | 79.7 | 82.9 | 84.4 |
| Percentage covered by a health scheme/health insurance ${ }^{3}$ | 54.3 | 59.7 | 58.3 | 60.1 |
| Percentage having a BPL card | 24.3 | 49.0 | 42.6 | 45.2 |
| Percentage with an LLIN mosquito net | 1.8 | 4.5 | 3.8 | 4.3 |
| Number | 3,810 | 10,807 | 14,617 | 60,903 |

[^1]
## Table 6 School attendance

Percentage of de facto household population age 6-17 years attending school in the 2014-15 school year by sex and residence, according to selected background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Male |  |  | Female |  |  | Total |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Urban | Rural | Total | Urban | Rural | Total | Urban | Rural | Total |
| Age |  |  |  |  |  |  |  |  |  |
| 6-10 (Primary) | 96.9 | 94.5 | 95.0 | 92.1 | 93.5 | 93.2 | 94.3 | 94.0 | 94.1 |
| 6-13 (Elementary) | 96.7 | 93.9 | 94.5 | 92.5 | 92.2 | 92.3 | 94.4 | 93.1 | 93.4 |
| 11-13 (Upper primary) | 96.4 | 93.0 | 93.7 | 93.2 | 90.1 | 90.9 | 94.5 | 91.5 | 92.3 |
| 14-15 (Secondary) | 91.7 | 84.1 | 86.1 | 87.6 | 83.8 | 85.0 | 89.6 | 84.0 | 85.5 |
| 16-17 (Higher secondary) | 75.3 | 66.6 | 68.9 | 72.1 | 57.9 | 62.2 | 73.7 | 62.7 | 65.8 |
| 11-14 years | 96.5 | 93.2 | 93.9 | 92.4 | 91.4 | 91.7 | 94.3 | 92.3 | 92.8 |

| Other | 88.9 | 79.7 | 81.8 | 85.7 | 78.3 | 80.2 | 87.2 | 79.0 | 81.0 |
| Don't know | * | (85.2) | 86.1 | (74.5) | (65.4) | 69.4 | 80.3 | 76.0 | 77.7 |

[^2]Table 7 Children's living arrangements and orphanhood
Percent distribution of de jure children under age 18 by their living arrangements, and percentage of children with one or both biological parents dead, according to background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Living with both parents | Living with mother but not with father | Living with father but not with mother | Not living with either parent | Total | Percentage with one or both parents dead ${ }^{1}$ | Number <br> of <br> children |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age |  |  |  |  |  |  |  |
| <5 years | 92.6 | 5.0 | 1.1 | 1.2 | 100.0 | 1.8 | 5,392 |
| 5-9 years | 88.5 | 4.6 | 1.7 | 5.2 | 100.0 | 4.3 | 6,641 |
| 10-14 years | 79.9 | 5.8 | 3.3 | 11.0 | 100.0 | 8.7 | 7,081 |
| 15-17 years | 70.8 | 8.5 | 3.6 | 17.1 | 100.0 | 13.1 | 3,646 |
| Residence |  |  |  |  |  |  |  |
| Urban | 75.2 | 7.3 | 2.5 | 15.0 | 100.0 | 7.8 | 5,216 |
| Rural | 86.6 | 5.2 | 2.3 | 5.9 | 100.0 | 6.1 | 17,543 |
| Sex |  |  |  |  |  |  |  |
| Male | 85.6 | 5.7 | 2.3 | 6.4 | 100.0 | 5.9 | 11,516 |
| Female | 82.3 | 5.7 | 2.4 | 9.7 | 100.0 | 7.1 | 11,243 |
| Total age $<15$ years | 86.5 | 5.2 | 2.1 | 6.3 | 100.0 | 5.2 | 19,113 |
| Total age <18 years | 84.0 | 5.7 | 2.4 | 8.0 | 100.0 | 6.5 | 22,759 |

${ }^{1}$ Includes children with father dead, mother dead, both parents dead, and one parent dead but missing information on survival status of the other parent

Table 8 Birth registration of children under age five
Percentage of de jure children under age five years whose birth was registered with the civil authorities, according to background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Percentage of children whose birth was registered |  |  | De jure children |
| :---: | :---: | :---: | :---: | :---: |
|  | Registered, has a birth certificate | Registered, does not have a birth certificate | Total registered |  |
| Age |  |  |  |  |
| <2 years | 42.4 | 19.2 | 61.6 | 1,909 |
| 2-4 years | 50.2 | 13.4 | 63.6 | 3,482 |
| Sex |  |  |  |  |
| Male | 46.9 | 15.6 | 62.5 | 2,778 |
| Female | 48.0 | 15.4 | 63.4 | 2,613 |
| Residence |  |  |  |  |
| Urban | 66.1 | 13.8 | 80.0 | 1,149 |
| Rural | 42.4 | 15.9 | 58.3 | 4,242 |
| Total | 47.5 | 15.5 | 62.9 | 5,392 |

Table 9 Birth registration of children under age five by district
Percentage of de jure children under age five years whose birth was registered with the civil authorities, by district, Arunachal Pradesh, 2015-16

|  | Percentage of children whose <br> birth was registered |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Registered, <br> has a | Registered, <br> does not have a <br> birth certificate | Total <br> registered | De jure <br> children |
| birth certificate |  |  |  |  |
|  | 60.1 | 14.4 | 74.5 | 84 |

| Not employed | 66.1 | 25.7 | 1,618 | 1,583 | 500 | 484 |
| Total age 15-49 | 100.0 | 100.0 | 2,449 | 2,449 | 1,946 | 1,930 |
| Age 50-54 | na | 9.1 | na | na | 194 | 210 |
| Total age 15-54 | na | 100.0 | na | na | 2,140 | 2,140 |

na $=$ Not applicable
${ }^{1}$ Refers to women/men who can read a whole sentence or part of a sentence and women/men who completed standard 6 or higher (who are assumed to be literate)

Table 11 Current fertility
Age-specific and total fertility rates and crude birth rates from NFHS-4 and NFHS-3 by residence, and total for NFHS-2 and NFHS-1, Arunachal Pradesh

| Age | NFHS-4 |  |  | NFHS-3 |  |  | NFHS-2 | NFHS-1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Urban | Rural | Total | Urban | Rural | Total | Total | Total |
| 15-19 | 0.037 | 0.064 | 0.057 | 0.078 | 0.067 | 0.070 | 0.066 | 0.115 |
| 20-24 | 0.093 | 0.147 | 0.131 | 0.154 | 0.190 | 0.178 | 0.160 | 0.246 |
| 25-29 | 0.107 | 0.120 | 0.116 | 0.165 | 0.166 | 0.165 | 0.129 | 0.194 |
| 30-34 | 0.056 | 0.071 | 0.067 | (0.105) | 0.117 | 0.113 | 0.068 | 0.139 |
| 35-39 | 0.033 | 0.032 | 0.032 | (0.000) | 0.069 | 0.053 | 0.043 | 0.081 |
| 40-44 | 0.012 | 0.018 | 0.017 | * | (0.033) | 0.026 | (0.013) | (0.039) |
| 45-49 | 0.000 | 0.006 | 0.005 | * | (0.000) | (0.000) | * | * |
| TFR(15-49) | 1.69 | 2.29 | 2.12 | (2.51) | 3.21 | 3.03 | 2.52 | 4.25 |
| CBR | 17.0 | 18.2 | 17.9 | (26.3) | 23.4 | 24.1 | 22.6 | 34.6 |

Note: Rates are for the period 1-36 months preceding the survey (approximately 1990-92 for NFHS-1, 1996-98 for NFHS-2, 2003-05 for NFHS-3, and 2013-15 for NFHS-4). Age-specific fertility rates are expressed per woman. Rates for the age group 45-49 might be slightly biased due to truncation.
TFR = Total fertility rate, expressed per woman
CBR $=$ Crude birth rate, expressed per 1,000 population
( ) Based on 125-249 unweighted woman-years of exposure

* Based on fewer than 125 unweighted woman-years of exposure

Table 12 Fertility by background characteristics
Total fertility rate for the three years preceding the survey, percentage of women age 15-49 currently pregnant, mean number of children ever born to women age 40-49, and total wanted fertility rate, by background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Total fertility rate | Percentage of women age 15-49 currently pregnant | Mean number of children ever born to women age 40-49 | Total wanted fertility rate |
| :---: | :---: | :---: | :---: | :---: |
| Residence |  |  |  |  |

## Table 13 Teenage pregnancy and motherhood

Percentage of women age 15-19 who have had a live birth or who are pregnant with their first child, and percentage who have begun childbearing, by background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Percentage of women age 15-19 who: |  | Percentage of women age 15-19 who have begun childbearing | Number of women |
| :---: | :---: | :---: | :---: | :---: |
|  | Have had a live birth | Are pregnant with first child |  |  |
| Age |  |  |  |  |
| 15 | 0.6 | 0.2 | 0.9 | 517 |
| 16 | 2.6 | 1.5 | 4.1 | 531 |
| 17 | 5.5 | 2.4 | 7.9 | 428 |
| 18 | 10.0 | 2.7 | 12.7 | 525 |
| 19 | 27.0 | 6.6 | 33.5 | 366 |
| Residence |  |  |  |  |
| Urban | 6.9 | 2.9 | 9.8 | 702 |
| Rural | 8.6 | 2.2 | 10.8 | 1,666 |
| Schooling |  |  |  |  |
| No schooling | 18.2 | 3.8 | 22.0 | 176 |
| $<5$ years complete | 26.4 | 2.2 | 28.7 | 70 |
| 5-9 years complete | 8.2 | 2.4 | 10.6 | 1,233 |
| 10-11 years complete | 3.8 | 2.4 | 6.2 | 677 |
| 12 or more years complete | 6.5 | 1.7 | 8.2 | 210 |
| Marital status |  |  |  |  |
| Never married | 0.0 | 0.0 | 0.0 | 1,997 |
| Currently married | 51.5 | 15.6 | 67.1 | 367 |
| Religion |  |  |  |  |
| Hindu | 10.2 | 2.0 | 12.2 | 562 |
| Christian | 8.2 | 2.5 | 10.7 | 1,027 |
| Buddhist/Neo-Buddhist | 9.2 | 1.2 | 10.4 | 321 |
| Other | 4.4 | 3.7 | 8.1 | 457 |
| Caste/tribe |  |  |  |  |
| Scheduled caste | 8.3 | 2.3 | 10.5 | 159 |
| Scheduled tribe | 6.7 | 2.6 | 9.3 | 1,661 |
| Other backward class | 10.0 | 0.0 | 10.0 | 123 |
| Other | 13.1 | 2.6 | 15.7 | 410 |
| Total | 8.1 | 2.4 | 10.5 | 2,368 |

Note: Total includes widowed/divorced/separated/deserted women and women who don't know their caste/tribe, who are not shown separately.

Table 14 Birth order
Percent distribution of births to all women during the three years preceding the survey by birth order, according to background characteristics, Arunachal Pradesh, 2015-16, and percent distribution of births to women by birth order, NFHS-3

| Background characteristic | Birth order |  |  |  | Total | Number of births |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4+ |  |  |
| Mother's current age |  |  |  |  |  |  |
| 15-19 | 87.1 | 10.4 | 2.6 | 0.0 | 100.0 | 175 |
| 20-29 | 39.4 | 33.8 | 15.9 | 11.0 | 100.0 | 1,761 |
| 30-39 | 11.6 | 20.4 | 22.1 | 45.9 | 100.0 | 780 |
| 40-49 | 2.5 | 10.6 | 18.4 | 68.5 | 100.0 | 126 |
| Residence |  |  |  |  |  |  |
| Urban | 38.7 | 30.9 | 16.3 | 14.2 | 100.0 | 646 |
| Rural | 31.4 | 26.7 | 17.0 | 24.9 | 100.0 | 2,197 |
| Mother's schooling |  |  |  |  |  |  |
| No schooling | 18.0 | 22.3 | 21.1 | 38.7 | 100.0 | 983 |
| $<5$ years complete | 28.8 | 27.1 | 18.9 | 25.2 | 100.0 | 206 |

| IUD or PPIUD | 59.9 | 50.9 | 65.3 | 235 |
| Total | 51.1 | 41.7 | 59.7 | 1,088 |

Note: Table includes only the contraceptive methods separately shown in the table and excludes users who obtained their method from friends/relatives or husband.
IUD = Intrauterine device; PPIUD = Postpartum intrauterine device
${ }^{1}$ Among women who were sterilized in the five years preceding the survey
( ) Based on 25-49 unweighted cases

Table 27 Twelve-month contraceptive discontinuation rates
Among women age 15-49 who started an episode of contraceptive use within the five years preceding the survey, the percentage of episodes discontinued within 12 months, by reason for discontinuation and specific method, Arunachal Pradesh, 2015-16

| Method | Reason for discontinuation |  |  |  |  |  |  |  | Switched to another method ${ }^{4}$ | Number <br> of episodes of use ${ }^{5}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Method failure | Desire to become pregnant | Other fertility related reason ${ }^{1}$ | Side effects/ health concerns | Wanted more effective method | Other method related reason ${ }^{2}$ | Other <br> reason | $\begin{gathered} \text { Any } \\ \text { reason } \end{gathered}$ |  |  |
| Female sterilization | (0.0) | (0.0) | (0.0) | (0.0) | (0.0) | (0.0) | (0.0) | (0.0) | (0.0) | 244 |
| Pill | 2.0 | 10.7 | 4.3 | 12.2 | 1.4 | 4.0 | 3.1 | 37.7 | 2.9 | 1,376 |
| IUD or PPIUD | 1.4 | 4.8 | 0.4 | 5.5 | 0.3 | 3.7 | 2.2 | 18.2 | 1.5 | 338 |
| Condom/Nirodh | 1.4 | 20.0 | 6.2 | 9.2 | 1.2 | 8.8 | 16.9 | 63.7 | 4.3 | 366 |
| Rhythm | 7.4 | 18.4 | 3.9 | 0.9 | 0.9 | 10.3 | 5.4 | 47.4 | 4.3 | 525 |
| Other ${ }^{6}$ | 9.9 | 18.5 | 5.8 | 1.0 | 1.3 | 12.8 | 12.8 | 62.1 | 10.0 | 432 |
| All modern spacing methods ${ }^{7}$ | 1.9 | 11.8 | 3.9 | 10.5 | 1.3 | 4.7 | 5.3 | 39.5 | 3.0 | 2,123 |
| All spacing methods ${ }^{8}$ | 3.9 | 13.6 | 4.2 | 7.6 | 1.2 | 6.9 | 6.5 | 43.8 | 4.2 | 3,037 |
| All methods | 3.6 | 12.6 | 4.0 | 7.0 | 1.1 | 6.4 | 6.0 | 40.6 | 3.8 | 3,284 |

Note: Figures are based on life table calculations using information on episodes of contraceptive use that began 3-62 months preceding the survey. All methods includes male sterilization, which is not shown separately.
IUD = Intrauterine device; PPIUD = Postpartum intrauterine device
${ }^{1}$ Includes infrequent sex/husband away, difficult to get pregnant/menopausal, and marital dissolution/separation
${ }^{2}$ Includes lack of access/too far, costs too much, and inconvenient to use
${ }^{3}$ Reasons for discontinuation are mutually exclusive and add to the total in this column
${ }^{4}$ The episodes of use included in this column are a subset of the discontinued episodes included in the discontinuation rate. A woman is considered to have switched to another method if she used a different method in the month following discontinuation or if she gave "wanted a more effective method" as the reason for discontinuation and started another method within two months of discontinuation.
${ }^{5}$ Number of episodes of use includes both episodes of use that were discontinued during the period of observation and episodes of use that were not discontinued during the period of observation
${ }^{6}$ Includes injectables, female condom, diaphragm, foam/jelly, standard days method, LAM, withdrawal, and other modern and traditional methods that are not shown separately
${ }^{7}$ Includes other modern spacing methods that are not shown separately
${ }^{8}$ Includes other spacing methods that are not shown separately
( ) Based on 25-49 unweighted cases

Table 28 Men's contraception-related perceptions and knowledge
Percentage of men age 15-49 who agree with two specific statements about women and contraception, and percent distribution of men according to their belief about the efficacy of condoms in preventing pregnancy, by background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Percentage of men who agree |  | Percentage of men who say that if a male condom is used correctly, it protects against pregnancy: |  |  |  |  | Number of men |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Contraception is women's business and a man should not have to worry about it | Women who use contraception may become promiscuous |  |  |  |  |  |  |
|  |  |  | Most of the time | Sometimes | Not at all | Don't know/ unsure ${ }^{1}$ | Total |  |

| Don't know | 13.8 | 18.4 | 32.2 | 9.1 | 20.8 | 29.8 | 22.9 | 39.2 | 62.1 | 48.1 | 45.3 | 66 |
| Total | 12.7 | 8.9 | 21.6 | 8.8 | 22.8 | 31.6 | 21.5 | 31.7 | 53.3 | 59.4 | 49.9 | 10,157 |

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012, Revising Unmet Need for Family Planning, DHS Analytical Studies No. 25, ICF International, Calverton, Maryland, USA. Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have unmet need for spacing if they are: at risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant; pregnant with a mistimed pregnancy; postpartum amenorrhoeic for up to two years following a mistimed birth and not using contraception. Women are considered to have unmet need for limiting if they are: at risk of becoming pregnant, not using contraception, and want no (more) children; pregnant with an unwanted pregnancy; postpartum amenorrhoeic for up to two years following an unwanted birth and not using contraception. Women who are classified as infecund have no unmet need because they are not at risk of becoming pregnant. Unmet need for family planning is the sum of unmet need for spacing and unmet need for limiting.
${ }^{2}$ Percentage of demand satisfied is met need divided by total demand
${ }^{3}$ Modern methods include female sterilization, male sterilization, pill, IUD/PPIUD, injectables, male condom, female condom, standard days method, diaphragm, foam/jelly, lactational amenorrhoea method (LAM), and other modern methods

Table 30 Unmet need for family planning by district
Percentage of currently married women age 15-49 with unmet need for family planning by district, Arunachal Pradesh, 2015-16 and total for NFHS-3

| District | Total <br> unmet need | Unmet need <br> for spacing | Unmet need <br> for limiting | Number <br> of women |
| :--- | :---: | :---: | :---: | ---: |
| Anjaw | 25.1 | 14.7 | 10.4 | 173 |
| Changlang | 10.7 | 5.6 | 5.1 | 1,242 |
| Dibang Valley | 15.4 | 12.6 | 2.7 | 23 |

| Papumpare | 50.8 | 29.8 | 80.6 | 81.6 | 22.1 | 871 | 36.0 | 665 |
| Tawang | 28.4 | 2.0 | 30.3 | 33.2 | 5.8 | 138 | 14.1 | 110 |
| Tirap | 32.6 | 1.9 | 34.5 | 34.6 | 2.5 | 382 | 36.4 | 312 |
| Upper Siang | 64.8 | 1.6 | 66.4 | 69.0 | 8.1 | 53 | 45.7 | 47 |
| Upper Subansiri | 41.5 | 3.1 | 44.7 | 47.0 | 7.0 | 323 | 17.6 | 237 |
| West Kameng | 45.3 | 11.6 | 57.0 | 56.8 | 9.1 | 324 | 23.1 | 262 |
| West Siang | 48.3 | 1.9 | 50.2 | 52.0 | 8.1 | 293 | 27.0 | 231 |
| Arunachal Pradesh | 42.7 | 9.6 | 52.3 | 53.8 | 8.9 | 5,032 | 30.3 | 3,888 |

${ }^{1}$ Health personnel includes doctor, auxiliary nurse midwife, nurse, midwife, lady health visitor, and other health personnel. If the respondent mentioned more than one person attending during delivery, only the most qualified person is considered in this table.
${ }^{2}$ Postnatal checks are checks on the women's health within 42 days of the birth.

Table 47 Delivery costs and financial assistance
The average out-of-pocket cost paid for delivery for the most recent live birth among women who had a live birth in the five years preceding the survey that was delivered in a health facility by type of facility, and among women who had a live birth in the five years preceding the survey for the most recent birth that was delivered in a health facility, the percentage who received financial assistance under Janani Suraksha Yojana (JSY), according to background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Average cost (Rs.) ${ }^{1}$ |  |  | Percentagewho receivedfinancialassistanceunder JSY | Number of births in a health facility |
| :---: | :---: | :---: | :---: | :---: | :---: |

[^12]Table 50 Trends in maternal care indicators
Maternal care indicators for births during the three years preceding the survey by residence, NFHS-4 and NFHS-3, Arunachal Pradesh

| Indicator | $\begin{gathered} \text { NFHS-4 } \\ (2015-16) \\ \hline \end{gathered}$ | $\begin{aligned} & \text { NFHS-3 } \\ & (2005-06) \end{aligned}$ |
| :---: | :---: | :---: |
| URBAN |  |  |
| Percentage who received antenatal care ${ }^{1}$ | 56.3 | 71.3 |
| Percentage who had at least four antenatal care visits ${ }^{1}$ | 38.2 | 43.4 |
| Percentage who received antenatal care within the first trimester of pregnancy ${ }^{1}$ | 42.3 | 39.0 |
| Percentage who received full antenatal care ${ }^{1,2}$ | 4.3 | 12.5 |
| Percentage of births delivered in a health facility ${ }^{3}$ | 83.1 | 64.1 |
| Percentage of deliveries assisted by health personnel ${ }^{3,4}$ | 84.7 | 65.4 |
| RURAL |  |  |
| Percentage who received antenatal care ${ }^{1}$ | 55.0 | 47.6 |
| Percentage who had at least four antenatal care visits ${ }^{1}$ | 23.7 | 15.5 |
| Percentage who received antenatal care within the first trimester of pregnancy ${ }^{1}$ | 36.0 | 17.6 |
| Percentage who received full antenatal care ${ }^{1,2}$ | 3.8 | 2.1 |
| Percentage of births delivered in a health facility ${ }^{3}$ | 48.2 | 19.0 |
| Percentage of deliveries assisted by health personnel ${ }^{3,4}$ | 49.6 | 21.1 |
| TOTAL |  |  |
| Percentage who received antenatal care ${ }^{1}$ | 55.3 | 54.4 |
| Percentage who had at least four antenatal care visits ${ }^{1}$ | 27.1 | 23.5 |
| Percentage who received antenatal care within the first trimester of pregnancy ${ }^{1}$ | 37.5 | 23.7 |
| Percentage who received full antenatal care ${ }^{1,2}$ | 3.9 | 5.1 |
| Percentage of births delivered in a health facility ${ }^{3}$ | 56.1 | 31.7 |
| Percentage of deliveries assisted by health personnel ${ }^{3,4}$ | 57.6 | 33.5 |

${ }^{1}$ Based on the last birth to women in the three years preceding the survey
${ }^{2}$ Full antenatal care includes having received at least four antenatal care visits, at least one tetanus toxoid (TT) injection, and having taken iron and folic acid (IFA) tablets or syrup for 100 or more days
${ }^{3}$ Based on all births in the three years preceding the survey
${ }^{4}$ Doctor, auxiliary nurse midwife (ANM), nurse, midwife, lady health visitor (LHV), or other health personnel

Table 51 Male involvement in maternal care: Men's report
Among men age 15-49 whose youngest living child was age 0-35 months, percentage for whom the youngest child's mother received antenatal care, percentage who were present for at least one antenatal check-up, percentage who were told by a health provider or worker at any time during the pregnancy about specific signs of pregnancy complications, percentage to whom a health provider or worker spoke about specific aspects of maternal care at any time during the pregnancy, and percentage whose youngest child was delivered in a health facility, and among men with a child age 0-35 months whose youngest living child was not delivered in a health facility, percentage who were given specific home delivery related information, by residence, Arunachal Pradesh, 2015-16

| Antenatal and delivery care information | Urban | Rural | Total |
| :--- | :---: | :---: | :---: |
|  |  |  |  |
| Percentage of men for whom the youngest child's mother received |  | 74.3 | 78.5 |
| antenatal care <br> Percentage of men who were present at any antenatal check-up | 81.5 | 59.3 | 64.7 |

## Percentage who were told by a health provider or worker about

 the following signs of pregnancy complications:| Vaginal bleeding | 58.0 | 52.5 | 53.8 |
| :---: | :---: | :---: | :---: |
| Convulsions | 52.9 | 42.5 | 45.0 |
| Prolonged labour | 59.1 | 56.8 | 57.4 |
| Severe abdominal pain | 58.6 | 59.3 | 59.1 |
| High blood pressure | 56.2 | 54.6 | 55.0 |
| Percentage ever told what to do if the mother had any pregnancy complications | 60.1 | 43.2 | 47.3 |
| Percentage whose youngest child age 0-35 months was delivered in a health facility | 89.2 | 51.1 | 60.3 |
| Percentage to whom a health provider or worker spoke about the following aspects of maternal care: |  |  |  |
| The importance of delivering in a health facility | 76.0 | 55.6 | 60.5 |
| The importance of proper nutrition for the mother during pregnancy | 75.0 | 58.7 | 62.7 |
| Family planning or delaying his next child | 71.8 | 49.6 | 55.0 |
| Number of men with a youngest child age 0-35 months | 92 | 286 | 378 |
| Among men whose last child age 0-35 months was not delivered in a health facility, percentage who were told the importance of: |  |  |  |
| Cord care | * | 35.7 | 36.9 |
| Breastfeeding the baby immediately after delivery | * | 41.3 | 42.2 |
| Keeping the baby warm immediately after birth | * | 49.0 | 50.8 |
| Number of men whose youngest child age 0-35 months was not delivered in a health facility | 10 | 140 | 150 |

[^13]Table 52 Vaccinations by background characteristics
Percentage of children age 12-23 months who received specific vaccines at any time before the survey (according to a vaccination card or the mother's report) and percentage with a vaccination card seen by the interviewer, by background characteristics, Arunachal Pradesh, 2015-16, and total for NFHS-3

| Background characteristic | Hepatitis B ${ }^{1}$ |  |  |  | BCG | DPT |  |  | Polio ${ }^{1}$ |  |  |  | Measles | All basic vaccinations ${ }^{2}$ | No vaccinations ${ }^{3}$ | Percentage with a vaccination card seen |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Table 55 Prevalence and treatment of diarrhoea-Continued
Percentage of children under age five who had diarrhoea in the two weeks preceding the survey and among children under age five who had diarrhoea in the two weeks preceding the survey, percentage who received advice or treatment from a health facility or health provider, who received oral rehydration therapy (ORT), who were given other treatments, and who were given no treatment, by background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Percentage of children with diarrhoea | Number of children | Percentage of children with diarrhoea taken to a health facility or health provider ${ }^{1}$ | Oral rehydration therapy(ORT) |  |  |  |  | Other treatments |  |  |  | Percentage not receiving any treatment | Number of children with diarrhoea |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Percentage given a fluid from ORS packets | Percentage given gruel | Percentage given either ORS or gruel | Percentage given increased fluids | Any ORT | Percentage given antibiotic drug | Percentage given other drug ${ }^{2}$ | Percentage given zinc supplements | Percent- age given home remedy/ herbal/ other |  |  |

| Caste/tribe |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Scheduled tribe | 12.9 | 25.5 | 17.9 | 33.0 | 4.0 | 6.7 | 100.0 | 10.2 | 28.4 | 20.5 | 29.1 | 3.7 | 1.4 | 6.8 | 100.0 | 10.8 | 46.0 | 232 |
| Other ${ }^{2}$ | (6.8) | (27.1) | (34.7) | (22.3) | (0.0) | (9.1) | 100.0 | (7.3) | (27.9) | (29.7) | (22.9) | (0.0) | (0.7) | (11.5) | 100.0 | (6.8) | (29.4) | 37 |
| Total | 10.7 | 26.4 | 21.1 | 32.9 | 2.9 | 6.0 | 100.0 | 8.8 | 27.3 | 22.5 | 29.8 | 2.7 | 1.9 | 7.1 | 100.0 | 9.2 | 41.7 | 318 |

Note: It is recommended that children should be given more liquids to drink during diarrhoea and food should not be reduced. Total includes children age $<6$ months, children whose mothers have less than 5 years of schooling, children belonging to scheduled caste or other backward class, and those whose caste/tribe is not known, who are not shown separately. ORT = Oral rehydration therapy, which includes a solution prepared from an oral rehydration salt (ORS) packet and/or gruel and/or increased fluids.
Continued feeding includes children who were given more, the same as usual, or somewhat less food during the diarrhoea episode
${ }^{2}$ Not belonging to a scheduled caste, scheduled tribe, or other backward class

[^15]Table 57 Knowledge of ORS packets
Percentage of all women and percentage of women who had a live birth in the five years preceding the survey who know about ORS packets for treatment of diarrhoea, by background characteristics, Arunachal Pradesh, 2015-16

| NFHS-3 (2005-06) | 21.7 | 43.3 | -1.6 | 6.1 | 15.3 | 3.4 | -0.7 | 11.1 | 32.5 | 0.6 | -1.4 | 733 | Note: Table is based on children who stayed in the household the night before the interview. Each of the indices is expressed in standard deviation units (SD) from the median of the WHO Child Growth Standards adopted in 2006. The indices in this table are NOT comparable to those based on the previously used 1977 NCHS/CDC/WHO Reference. Table is based on children with valid dates of birth (month and year) and valid measurement of both height and weight. Total includes children whose mother's schooling is not known, who are not shown separately.

Recumbent length is measured for children under age 2, or in the few cases when the age of the child is unknown and the child is less than 85 cm ; standing height is measured for all other children ${ }^{2}$ Includes children who are below -3 standard deviations (SD) from the WHO Child Growth Standards population median
3
${ }^{4}$ Excludes children whose mothers were not interviewed
${ }^{4}$ Firn twins (triplets, etc.) are counted as first births be
${ }^{5}$ For women who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the household schedule.
${ }^{6}$ Includes children whose mothers are deceased
Excludes children whose mothers were not weigh
${ }^{7}$ Excludes children whose mothers were not weighed and measured, children whose mothers were not interviewed, and children whose mothers are pregnant or gave birth within the preceding 2 months. Mother's nutritional status in terms of BMI (Body Mass Index) is presented in Table70.
() Based on 25-49 unweighted cases

Table 61 Initial breastfeeding
Among last-born children who were born in the two years preceding the survey, the percentage who were ever breastfed, and the percentage who started breastfeeding within one hour and one day of birth, and among last-born children born in the two years preceding the survey who were ever breastfed, the percentage who received a prelacteal feed, by background characteristics, Arunachal Pradesh, 2015-16

| Background characteristic | Among last-born children born in the past two years: |  |  |  | Among last-born children born in the past two years who were ever breastfed: |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percentage ever breastfed | Percentage who started breastfeeding within one hour of birth ${ }^{1}$ | Percentage who started breastfeeding within one day of birth ${ }^{2}$ | Number of last-born children | Percentage who received a prelacteal feed ${ }^{3}$ | Number of last-born ever breastfed children |

| Place of delivery |  |  |  |  |  |  |
| Health facility | 92.6 | 55.5 | 80.6 | 1,001 | 24.2 | 927 |
| At home | 92.8 | 68.9 | 86.3 | 753 | 12.2 | 699 |
| Total | 92.6 | 61.1 | 83.1 | 1,765 | 19.0 | 1,635 |

Note: Table is based on last-born children born in the past two years whether the children are living or dead at the time of interview. Total includes children whose caste/tribe is not known and children who were delivered in an "other" place of delivery, who are not shown separately.
TBA $=$ Traditional birth attendant
${ }^{1}$ Includes children who started breastfeeding immediately after birth
${ }^{2}$ Includes children who started breastfeeding within one hour of birth
${ }^{3}$ Children given something other than breastmilk during the first three days of life
${ }^{4}$ Doctor, nurse, midwife, auxiliary nurse midwife, lady health visitor, or other health personnel
Table 62 Breastfeeding status by age
Percent distribution of youngest children under two years living with the mother by breastfeeding status, percentage currently breastfeeding, and the percentage of all children under two years using a bottle with a nipple, according to age in months, Arunachal Pradesh, 2015-16

| Age in months | Not breastfeeding | Exclusively breastfed | Breastfeeding and consuming: |  |  |  | Total | Percentage currently breastfeeding | Number of youngest children under two years living with the mother | Percentage using a bottle with a nipple | Number of all children under two years |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Plain water only | Non-milk liquids/juice | Other milk | Complementary foods |  |  |  |  |  |
| <2 | 7.8 | 65.3 | 6.5 | 0.4 | 10.3 | 9.7 | 100.0 | 92.2 | 93 | 11.1 | 93 |
| 2-3 | 6.3 | 63.9 | 10.2 | 0.0 | 4.1 | 15.6 | 100.0 | 93.7 | 162 | 13.4 | 163 |
| 4-5 | 8.9 | 48.1 | 11.0 | 1.2 | 6.9 | 23.9 | 100.0 | 91.1 | 175 | 18.4 | 176 |
| 6-8 | 8.7 | 21.2 | 11.9 | 1.4 | 2.8 | 53.9 | 100.0 | 91.3 | 212 | 18.2 | 213 |
| 9-11 | 9.4 | 9.1 | 5.6 | 3.0 | 4.8 | 68.1 | 100.0 | 90.6 | 236 | 23.2 | 239 |
| 12-17 | 11.7 | 6.4 | 3.5 | 2.5 | 2.4 | 73.6 | 100.0 | 88.3 | 459 | 20.1 | 466 |
| 18-23 | 16.0 | 2.9 | 3.2 | 0.9 | 0.5 | 76.6 | 100.0 | 84.0 | 401 | 18.8 | 425 |
| <4 | 6.9 | 64.4 | 8.8 | 0.2 | 6.3 | 13.4 | 100.0 | 93.1 | 254 | 12.6 | 255 |
| <6 | 7.7 | 57.7 | 9.7 | 0.6 | 6.6 | 17.7 | 100.0 | 92.3 | 430 | 15.0 | 431 |
| 6-9 | 9.9 | 18.8 | 9.4 | 2.5 | 3.2 | 56.2 | 100.0 | 90.1 | 288 | 18.9 | 289 |
| 12-15 | 13.1 | 6.1 | 4.5 | 2.4 | 2.4 | 71.5 | 100.0 | 86.9 | 311 | 20.9 | 315 |
| 12-23 | 13.7 | 4.7 | 3.3 | 1.7 | 1.5 | 75.0 | 100.0 | 86.3 | 860 | 19.5 | 890 |
| 20-23 | 16.8 | 2.4 | 2.7 | 0.6 | 0.7 | 76.8 | 100.0 | 83.2 | 256 | 18.8 | 274 |

Note: Breastfeeding status refers to a "24-hour" period (yesterday and last night). Children who are classified as breastfeeding and consuming plain water only consumed no liquid or solid supplements. The categories of not breastfeeding, exclusively breastfed, breastfeeding and consuming plain water, non-milk liquids/juice, other milk, and complementary foods (solids and semi-solids) are hierarchical and mutually exclusive, and their percentages add to 100 percent. Thus children who receive breastmilk and non-milk liquids and who do not receive other milk and who do not receive complementary
foods are classified in the non-milk liquid category even though they may also get plain water. Any children who get complementary food are classified in that category as long as they are breasteeding as well.
Table 63 Median duration of breastfeeding and infant and young child feeding (IYCF) practices
Median duration (months) of breastfeeding among last-born children born in the last three years and percentage of youngest children age 6-23 months living with the mother who were fed with appropriate feeding practices based on the number of food groups and times they were fed during the day or night preceding the survey, by breastfeeding status and background characteristics, Arunachal Pradesh, 2015-16

|  | Median duration (months) of breastfeeding among last-born children born in the last three years ${ }^{1}$ |  |  |  | Among breastfed children 6-23 months, percentage fed: |  |  |  | Among nonbreastfed children 6-23 months, percentage fed: |  |  |  |  | Among all children <br> 6-23 months, percentage fed: |  |  |  |  |

Note: Total includes children whose caste/tribe is not known, who are not shown separately.
na = Not applicable . not currently living with the mother are not currently breastfeeding.
${ }^{3}$ Food groups are: a. infant formula, milk other than breastmilk, cheese or yogurt, or other milk products; b. foods made from grains or roots, including porridge or gruel, fortified baby food; c. vitamin A-rich fruits and vegetables; d. other fruits and vegetables; e. eggs; f. meat, poultry, fish, shellfish, or organ meats; g. beans, peas, lentils, or nuts; h. foods made with oil, fat, ghee, or butter ${ }^{4}$ Receiving solid or semi-solid food at least twice a day for breastfed infants 6-8 months and at least three times a day for breastfed children 9-23 months
reasted children age 6-23 months are considered to be fed with a minimum standard of three Infant and Young Child Feeding Practices if they receiver
receive the minimum meal frequency, and receive solid or semi-solid foods from at least four food groups not including the milk or milk products food goup
, 4 and 6 .
() Based on 25-49 unweighted cases

[^17]Table 64 Child feeding practices and nutritional status of children by district
Among last-born children born in the past 2 years, percentage breastfed within one hour of birth, percentage of youngest children under age 6 months living with the mother who are exclusively breastfed, and percentage of children under age five years classified as malnourished according to three anthropometric indices of nutritional status: height-for-age, weight-for-height, and weight-for-age, by district, Arunachal Pradesh, 2015-16

|  | Among last-born children born in the past 2 years |  | Percentage of children under age |  | Height-for-age ${ }^{2}$ | Weight-for-height | Weight-for-age |  |

Table 65 Prevalence of anaemia in children-Continued
Percentage of children age 6-59 months classified as having anaemia, by background characteristics, Arunachal Pradesh, 2015-16, and total for NFHS-3

| Background characteristic | Anaemia status by haemoglobin level |  |  | Any anaemia ( $<11.0 \mathrm{~g} / \mathrm{dl}$ ) | Number of children |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \text { Mild } \\ (10.0-10.9 \mathrm{~g} / \mathrm{dl}) \end{gathered}$ | $\begin{aligned} & \text { Moderate } \\ & (7.0-9.9 \mathrm{~g} / \mathrm{dl}) \end{aligned}$ | $\begin{gathered} \text { Severe } \\ (<7.0 \mathrm{~g} / \mathrm{dl}) \\ \hline \end{gathered}$ |  |  |
| Child's living arrangements |  |  |  |  |  |
| Living with both parents | 29.8 | 20.3 | 0.5 | 50.6 | 3,791 |
| Living with one or neither parent | 26.4 | 24.9 | 0.7 | 51.9 | 291 |
| Mother's anaemia status ${ }^{4}$ |  |  |  |  |  |
| Not anaemic | 27.1 | 17.0 | 0.6 | 44.7 | 2,247 |
| Mildly anaemic | 34.7 | 23.9 | 0.6 | 59.2 | 1,295 |
| Moderately/severely anaemic | 32.1 | 32.9 | 0.2 | 65.2 | 348 |
| Total | 29.6 | 20.6 | 0.5 | 50.7 | 4,082 |
| NFHS-3 (2005-06) | 27.1 | 29.1 | 0.8 | 56.9 | 728 |

Note: Table is based on children who stayed in the household the night before the interview. Prevalence of anaemia, based on haemoglobin levels, is adjusted for altitude using the "CDC formulas (Centers for Disease Control (CDC)". 1998. Recommendations to prevent and control iron deficiency in the United States. Morbidity and Mortality Weekly Report 47 (RR-3): 1-29). Haemoglobin levels shown in grams per decilitre ( $\mathrm{g} / \mathrm{dl}$ ). Total includes children whose mother's schooling is not known, who are not shown separately.
${ }^{1}$ Excludes children whose mothers were not interviewed
${ }^{2}$ For women who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the household schedule.
${ }^{3}$ Includes children whose mothers are deceased
${ }^{4}$ Mildly anaemic is classified as $10.0-11.9 \mathrm{~g} / \mathrm{dl}$ for non-pregnant women and $10.0-10.9 \mathrm{~g} / \mathrm{dl}$ for pregnant women. Moderately/severely anaemic is $<10.0 \mathrm{~g} / \mathrm{dl}$. Adjusted for altitude and for smoking status. Excludes children whose mother's anaemia status is not known. () Based on 25-49 unweighted cases

| Total age 15-49 | 22.6 | 28.6 | 49.8 | 15.5 | 3.9 | 2.2 | 100.0 | 0.2 | 1,823 |
| Age 50-54 | 33.0 | 23.2 | 44.4 | 21.4 | 8.9 | 2.1 | 100.0 | 0.6 | 185 |
| Total age 15-54 | 23.6 | 28.1 | 49.3 | 16.1 | 4.3 | 2.2 | 100.0 | 0.3 | 2,008 |

Note: Total includes men who don't know their caste/tribe, who are not shown separately.
SBP = Systolic blood pressure; DBP = Diastolic blood pressure
${ }^{1}$ A man is classified as having hypertension if he has SBP $\geq 140 \mathrm{mmHg}$ or DBS $\geq 90 \mathrm{mmHg}$ at time of survey, or he is currently taking antihypertension medication to control his blood pressure. The term hypertension as used in this table is not meant to be a clinical diagnosis of the disease, but rather to provide an indication of the disease burden in the population at the time of the survey.

Table 99 Spousal violence by husband's characteristics and empowerment indicators-Continued
Percentage of ever-married women age 15-49 who have ever suffered emotional, physical, or sexual violence committed by their husband, according to his characteristics, marital characteristics, and selected empowerment indicators, Arunachal Pradesh, 2015-16

|  | Emotional |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Background characteristic | Physical <br> violence | Sexual <br> violence | Physical or <br> sexual <br> violence | Emotional, <br> physical, or <br> sexual violence | Number <br> of women |

| Number of reasons given for refusing to have sexual intercourse with husband ${ }^{5}$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 13.8 | 24.9 | 6.4 | 26.6 | 29.1 | 289 |
| 1-2 | 19.2 | 35.1 | 8.8 | 38.2 | 44.3 | 288 |
| 3 | 16.2 | 28.1 | 9.7 | 29.0 | 32.6 | 599 |
| Afraid of husband |  |  |  |  |  |  |
| Most of the time | 40.9 | 68.7 | 30.7 | 69.2 | 69.2 | 65 |
| Sometimes | 16.8 | 31.6 | 8.8 | 33.4 | 37.3 | 867 |
| Never | 8.4 | 9.7 | 2.2 | 10.9 | 15.9 | 245 |
| Total | 16.4 | 29.0 | 8.7 | 30.7 | 34.6 | 1,176 |

Note: Husband refers to the current husband for currently married women and the most recent husband for widowed, divorced, separated, or deserted women. Total includes women whose husbands drink alcohol but never get drunk and women who agree with 7 reasons for which wife beating is justified, who are not shown separately.
${ }^{1}$ Currently married women only
${ }^{2}$ Behaviours include: Is jealous or angry if she talks to other men, frequently accuses her of being unfaithful, does not permit her to meet her female friends, tries to limit her contact with her family, insists on knowing where she is at all times, and does not trust her with any money
${ }^{3}$ Currently married women only. Decisions included are decisions about own health care, major household purchases, and visits to her family or relatives.
${ }^{4}$ Reasons given for which wife beating is justified include: she goes out without telling him, she neglects the house or children, she argues with him, she refuses to have sexual intercourse with him, she doesn't cook food properly, he suspects she is unfaithful, and she shows disrespect for in-laws ${ }^{5}$ Reasons given for refusing to have sexual intercourse with husband include: she knows her husband has a sexually transmitted disease, she knows her husband has sex with other women, and she is tired or not in the mood
( ) Based on 25-49 unweighted cases

Table 100 Injuries to women due to spousal violence
Percentage of ever-married women age 15-49 who have experienced spousal violence by types of injuries resulting from what their husband did to them, the type of violence, and whether they have experienced the violence ever and in the 12 months preceding the survey, Arunachal Pradesh, 2015-16

| Type of spousal violence experienced | Percentage of women who have had: |  |  |  |  | Number of ever-married women |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Cuts, bruises, or aches | Severe burns | Eye injuries, sprains, dislocations, or minor burns | Deep wounds, broken bones, broken teeth, or any other serious injury | Any of these injuries |  |
| Experienced physical violence ${ }^{1}$ |  |  |  |  |  |  |
| Ever ${ }^{2}$ | 14.9 | 2.4 | 6.6 | 7.4 | 22.3 | 342 |
| In the past 12 months | 14.5 | 2.1 | 6.3 | 8.9 | 22.4 | 248 |
| Experienced sexual violence |  |  |  |  |  |  |
| Ever ${ }^{2}$ | 17.3 | 2.4 | 5.7 | 6.2 | 23.7 | 102 |
| In the past 12 months | 16.3 | 2.8 | 3.8 | 5.4 | 21.9 | 86 |
| Experienced physical or sexual violence |  |  |  |  |  |  |
| Ever ${ }^{2}$ | 14.1 | 2.3 | 6.2 | 7.0 | 21.1 | 361 |
| In the past 12 months | 14.0 | 1.9 | 5.7 | 8.1 | 21.2 | 275 |
| Experienced physical and sexual violence |  |  |  |  |  |  |
| Ever ${ }^{2}$ | 21.3 | 2.9 | 7.0 | 7.7 | 29.2 | 83 |
| In the past 12 months | (19.5) | (4.1) | (5.6) | (7.9) | (27.6) | 59 |

Note: Husband refers to the current husband for currently married women and the most recent husband for widowed, divorced, separated, or deserted women.
${ }^{1}$ Excludes women who reported violence only in response to a direct question on violence during pregnancy
${ }^{2}$ Includes violence in the past 12 months
( ) Based on 25-49 unweighted cases

Table 101 Help seeking
Percentage of women age 15-49 who have ever experienced physical or sexual violence by whether they have ever sought help, and among those who have sought help from any source, the source from which help was sought, according to the type of violence experienced and marital status, Arunachal Pradesh, 2015-16

| Source | Type of violence experienced |  |  | Marital status |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Physical only | Sexual only | Both physical and sexual | Evermarried | Never married |  |
| Help seeking |  |  |  |  |  |  |
| Never sought help and never told anyone | 81.9 | (69.5) | 64.1 | 79.2 | (70.0) | 77.7 |
| Never sought help but told someone | 10.8 | (30.5) | 19.7 | 13.3 | (16.4) | 13.8 |
| Sought help | 7.3 | (0.0) | 16.2 | 7.6 | (13.6) | 8.6 |
| Number of women who experienced violence | 340 | 29 | 88 | 381 | 75 | 457 |
| Sources of help among those who sought any help ${ }^{1}$ |  |  |  |  |  |  |
| Own family | * | nc | * | (53.4) | * | (50.4) |
| Husband's family | * | nc | * | (26.6) | * | (19.6) |
| Friend | * | nc | * | (32.7) | * | (39.3) |
| Neighbour | * | nc | * | (11.4) | * | (8.4) |
| Police | * | nc | * | (2.6) | * | (1.9) |
| Number of women who experienced violence and sought help | 25 | 0 | 14 | 29 | 10 | 39 |

## $\mathrm{nc}=$ No cases

${ }^{1}$ Women can report more than one source from which they sought help.
( ) Based on 25-49 unweighted cases

* Percentage not shown; based on fewer than 25 unweighted cases

## Appendix

## ESTIMATES OF SAMPLING ERRORS

The estimates from a sample survey are affected by two types of errors: (1) non-sampling errors, and (2) sampling errors. Non-sampling errors are the results of mistakes made in implementing data collection and data processing, such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the fourth National Family Health Survey (NFHS-4) to minimize this type of error, non-sampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in NFHS-4 is only one of many samples that could have been selected from the same population, using the same design and expected sample size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability among all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

A sampling error is usually measured in terms of the standard error for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to calculate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic calculated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95 percent of all possible samples of identical size and design.

If the sample of respondents had been selected as a simple random sample, it would have been possible to use straightforward formulas for calculating sampling errors. However, the NFHS-4 sample is the result of a multi-stage stratified design, and, consequently, it was necessary to use more complex formulae. The computer software used to calculate sampling errors for NFHS-4 is programmed in SAS. This procedure uses the Taylor linearization method for variance estimation for survey estimates that are means or proportions. The Jackknife repeated replication method is used for variance estimation of more complex statistics such as total fertility rates and child mortality rates.

The Taylor linearization method treats any proportion or mean as a ratio estimate, $r=y / x$, where $y$ represents the total sample value for variable $y$, and $x$ represents the total number of cases in the group or subgroup under consideration. The variance of $r$ is computed using the formula given below, with the standard error being the square root of the variance:

$$
S E^{2}(r)=\operatorname{var}(r)=\frac{1-f}{x^{2}} \sum_{h=1}^{H}\left[\frac{m_{h}}{m_{h}-1}\left(\sum_{i=1}^{m_{h}} z_{h i}^{2}-\frac{z_{h}^{2}}{m_{h}}\right)\right]
$$

in which

$$
z_{h i}=y_{h i}-r x_{h i}, \text { and } \quad z_{h}=y_{h}-r x_{h}
$$

Where $h$ represents the stratum, which varies from 1 to $H$,
$m_{h}$ is the total number of clusters selected in the $h_{t h}$ stratum,
$y_{h i}$ is the sum of the weighted values of variable $y$ in the $i_{t h}$ cluster in the $h_{t h}$ stratum, $x_{h i} \quad$ is the sum of the weighted number of cases in the $i_{t h}$ cluster in the $h_{t h}$ stratum, and $f \quad$ is the overall sampling fraction, which is so small that it is ignored.

The Jackknife repeated replication method derives estimates of complex rates from each of several replications of the parent sample, and calculates standard errors for these estimates using simple formulae. Each replication considers all but one cluster in the calculation of the estimates. Pseudo-independent replications are thus created. In the NFHS-4 sample for Arunachal Pradesh, there were 731 clusters. Hence, 731 replications were created. The variance of a rate $r$ is calculated as follows:

$$
S E^{2}(r)=\operatorname{var}(r)=\frac{1}{k(k-1)} \sum_{i=1}^{k}\left(r_{i}-r\right)^{2}
$$

in which

$$
r_{i}=k r-(k-1) r_{(i)}
$$

Where $r$ is the estimate computed from the full sample of 731 clusters,
$\mathrm{r}(i)$ is the estimate computed from the reduced sample of 730 clusters ( $i^{\text {th }}$ cluster excluded), and
$k \quad$ is the total number of clusters.

In addition to the standard error, the design effect (DEFT) for each estimate is also computed, which is defined as the ratio between the standard error using the given sample design and the standard error that would result if a simple random sample had been used. A DEFT value of 1.0 indicates that the sample design is as efficient as a simple random sample, while a value greater than 1.0 indicates the increase in the sampling error due to the use of a more complex and less statistically efficient design. The relative standard error (SE/R) and confidence limits ( $\mathrm{R} \pm 2 \mathrm{SE}$ ) for each estimate are also computed.

Sampling errors for NFHS-4 are calculated for selected variables considered to be of primary interest. The results are presented in this appendix for Arunachal Pradesh as a whole and for the urban and rural areas of the state. For each variable, the type of statistic (mean, proportion, rate, or ratio) and the base population are given in Table A.1. Table A. 2 presents the value of the statistic (R), its standard error (SE), the number of unweighted (N) and weighted (WN) cases, the design effect (DEFT), the relative standard error (SE/R), and the 95 percent confidence limits ( $\mathrm{R} \pm 2 \mathrm{SE}$ ); for each variable. The DEFT is considered undefined when the standard error for a simple random sample is zero (when the estimate is close to 0 or 1 ).

| Variable | Estimate | Base population |
| :---: | :---: | :---: |
| HOUSEHOLDS |  |  |
| Using an improved source of drinking water | Proportion | Households |
| Using an improved sanitation facility | Proportion | Households |
| Using iodized salt | Proportion | Households |
| Sex ratio (females per 1,000 males) | Ratio | De facto household population, all ages |
| WOMEN |  |  |
| No schooling (Females age 6 years and above) | Proportion | De facto household population of females age 6 and above |
| Urban residence | Proportion | Women age 15-49 |
| No schooling (Women age 15-49) | Proportion | Women age 15-49 |
| Completed 10 or more years of schooling | Proportion | Women age 15-49 |
| Never married, including married gauna not performed | Proportion | Women age 15-49 |
| Currently married | Proportion | Women age 15-49 |
| Married before age 18 | Proportion | Women age 20-49 |
| Currently using any contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using a modern contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using a traditional contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using pill | Proportion | Currently married women age 15-49 |
| Currently using IUD/PPIUD | Proportion | Currently married women age 15-49 |
| Currently using condom/Nirodh | Proportion | Currently married women age 15-49 |
| Currently using female sterilization | Proportion | Currently married women age 15-49 |
| Using public health sector source of contraception | Proportion | Women age 15-49 currently using modern methods of contraception |
| Unmet need for family planning | Proportion | Currently married women age 15-49 |
| Want no more children | Proportion | Currently married women age 15-49 |
| Want to delay next birth at least 2 years | Proportion | Currently married women age 15-49 |
| Mother received four or more antenatal care (ANC) visits | Proportion | Women with at least one birth in last five years (last birth) |
| Took iron and folic acid (IFA) for 100 days or more | Proportion | Women with at least one birth in last five years (last birth) |
| Birth registration | Proportion | De jure children under age 5 years |
| Births delivered by a health personnel | Proportion | Births in last 5 years |
| Institutional delivery | Proportion | Births in last 5 years |
| Postnatal check for mother within 2 days of birth | Proportion | Women with at least one birth in last five years (last birth) |
| Postnatal check for newborn within 2 days of birth | Proportion | Women with at least one birth in last five years (last birth) |
| Exclusive breastfeeding | Proportion | Children under age 6 months |
| Children with diarrhoea | Proportion | Children under age 5 years |
| Treated with oral rehydration salt (ORS) packets | Proportion | Children under age 5 years with diarrhoea in last 2 weeks |
| Children with diarrhoea taken to a health provider | Proportion | Children under age 5 years with diarrhoea in last 2 weeks |
| Child received BCG vaccination | Proportion | Children age 12-23 months |
| Child received DPT vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child received polio vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child received measles vaccination | Proportion | Children age 12-23 months |
| Child received hepatitis B vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child with all basic vaccinations | Proportion | Children age 12-23 months |
| Children given vitamin A supplement in past 6 months | Proportion | Children age 9-59 months |
| Height-for-age, stunting (below -2SD) | Proportion | Children under age 5 years who were measured |
| Weight-for-height, wasting (below -2SD) | Proportion | Children under age 5 years who were measured |
| Weight-for-age, underweight (below -2SD) | Proportion | Children under age 5 years who were measured |
| Children with any anaemia | Proportion | Children age 6-59 months with an anaemia test |
| Women with any anaemia | Proportion | Women age 15-49 with an anaemia test |
| Body mass index (BMI) $<18.5 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Women age 15-49 who were measured |
| Body mass index (BMI) $\geq 25.0 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Women age 15-49 who were measured |
| Have heard of HIVIAIDS | Proportion | Women age 15-49 |
| Have comprehensive knowledge about HIVIAIDS | Proportion | Women age 15-49 |
| Ever experienced physical or sexual violence | Proportion | Women age 15-49 |
| Total fertility rate (last 3 years) | Rate | Women |
| Neonatal mortality | Rate | Births in last 5 years |
| Postneonatal mortality | Rate | Births in last 5 years |
| Infant mortality | Rate | Births in last 5 years |
| Child mortality | Rate | Births in last 5 years |
| Under-five mortality | Rate | Births in last 5 years |
| MEN |  |  |
| No schooling (Males age 6 years and above) | Proportion | De facto household population of males age 6 and above |
| Urban residence | Proportion | Men age 15-49 |
| No schooling (Men age 15-49) | Proportion | Men age 15-49 |
| Completed 10 or more years of schooling | Proportion | Men age 15-49 |
| Never married, including married gauna not performed | Proportion | Men age 15-49 |
| Currently married | Proportion | Men age 15-49 |
| Married before age 21 | Proportion | Men age 25-49 |
| Want no more children | Proportion | Currently married men age 15-49 |
| Want to delay next birth at least 2 years | Proportion | Currently married men age 15-49 |
| Men with any anaemia | Proportion | Men age 15-49 with an anaemia test |
| Body mass index (BMI) $<18.5 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Men age 15-49 who were measured |
| Body mass index (BMI) $\geq 25.0 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Men age 15-49 who were measured |
| Have heard of HIVIAIDS | Proportion | Men age 15-49 |
| Have comprehensive knowledge about HIV/AIDS | Proportion | Men age 15-49 |

Table A. 2 Sampling errors: Total sample, Arunachal Pradesh, 2015-16

[^0]:    na $=$ Not applicable
    ${ }^{1}$ Females per 1,000 males
    ${ }^{2}$ Population age 6 and above

[^1]:    $B P L=$ Below poverty line
    ${ }^{1}$ Cows, bulls, buffaloes, camels, horses, donkeys, mules, goats, sheep, chickens, or ducks
    ${ }^{2}$ Percentage of households in which any usual member of the household has a bank account/post office account
    ${ }^{3}$ Percentage of households in which any usual member of the household is covered by a health scheme/health insurance

[^2]:    Note: In this table, children's age refers to their age at the start of the 2014-15 school year (assumed here to be April 2014).
    ( ) Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases

[^3]:    Note: Women who have been sterilized or whose husband has been sterilized are considered to want no more children. Men who are sterilized or who mention in response to the question about desire for children that their wife has been sterilized are considered to want no more children. Total includes women and men who don't know their caste/tribe, who are not shown separately.
    na $=$ Not applicable
    ${ }^{1}$ Includes current pregnancy of woman/wife
    ${ }^{2}$ Excludes pregnant women and men with pregnant wives
    () Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases

[^4]:    ${ }^{1}$ Includes current pregnancy of woman/wife
    ${ }^{2}$ Means are calculated excluding respondents who gave non-numeric responses

[^5]:    ${ }^{1}$ Includes pill, IUD/PPIUD, injectables, male condom, female condom, and lactational amenorrhoea method (LAM)
    ${ }^{2}$ Includes rhythm, withdrawal, and other traditional methods

[^6]:    $\mathrm{nc}=$ No cases

[^7]:    Note: All information in this table is based on women's reports. Table includes all users of modern contraceptive methods regardless of their marital status. All modern methods includes users of male sterilization, who are not shown separately.
    IUD $=$ Intrauterine device; PPIUD $=$ Postpartum intrauterine device
    AYUSH = Ayurveda, Yoga and Naturopathy, Unani, Siddha and Homeopathy; UHC = Urban health centre; UHP = Urban health post; UFWC = Urban family welfare centre; $\mathrm{CHC}=$ Community health centre; $\mathrm{PHC}=$ Primary health centre; $\mathrm{ANM}=$ Auxiliary nurse midwife;
    ICDS $=$ Integrated Child Development Services; ASHA $=$ Accredited Social Health Activist; NGO $=$ Nongovernmental organization
    ${ }^{1}$ Excludes standard days method, lactational amenorrhoea method (LAM), and "other" modern methods
    ( ) Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases

[^8]:    Note: Total includes men who don't know their caste/tribe, who are not shown separately.
    ${ }^{1}$ Includes missing values and those who have never heard of male condoms

[^9]:    Note: Total includes children belonging to other backward class and children with mother's age at birth 40-49, who are not shown separately.
    ${ }^{1}$ Computed as the difference between the infant and neonatal mortality rates
    ${ }^{2}$ Not belonging to a scheduled caste, scheduled tribe or other backward class
    ${ }^{3}$ Excludes first-order births
    ( ) Based on 250-499 unweighted person-years of exposure to the risk of death

[^10]:    ( ) Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases

[^11]:    Note: Total includes information on births to women who delivered in an "other" place of delivery, which is not shown separately.
    na $=$ Not applicable
    ${ }^{1}$ Health personnel includes doctor, auxiliary nurse midwife, nurse, midwife, lady health visitor, and other health personnel. If the respondent mentioned more than one person attending during delivery, only the most qualified person is considered in this table.
    ${ }^{2}$ Based on the last live birth in the five years preceding the survey
    ${ }^{3}$ Postnatal checks are checks on the woman's health within 42 days of the birth
    ${ }^{4}$ Includes nongovernmental organizations or trust hospitals/clinics
    ( ) Based on 25-49 unweighted cases

[^12]:    Note: Total includes information on births to women delivered in an "other" place of delivery, which is not shown separately.
    ${ }^{1}$ Includes newborns who received a health check after the first week
    ${ }^{2}$ Includes nongovernmental organizations or trust hospitals/clinics
    ( ) Based on 25-49 unweighted cases

[^13]:    * Percentage not shown; based on fewer than 25 unweighted cases

[^14]:    Note: Total includes Upper Siang, which is not shown separately because there are fewer than 25 unweighted cases.
    Child has not received any vaccinations listed in the table

[^15]:    () Based on 25-49 unweighted cases

[^16]:    ORS = Oral rehydration salt
    ( ) Based on 25-49 unweighted cases

[^17]:    * Based on fewer than 25 unweighted cases

[^18]:    ${ }^{1}$ Based on the youngest child living with the mother standing height is measured for all other children.
    ${ }^{3}$ Based on the WHO Child Growth Standards population median
    ( ) Based on 25-49 unweighted cases

[^19]:    * Percentage not shown; based on fewer than 25 unweighted cases

[^20]:    Note: Total includes women/men who don't know their caste/tribe, who are not shown separately.
    ${ }^{1}$ Partner who has no other sex partners
    ${ }^{1}$ Partner who has no other sex partners
    ${ }^{2}$ Comprehensive knowledge means knowing that consistent use of condoms every time they have sex and having just one uninfected faithful sex partner can reduce the chance of getting HIV/AIDS,
    ${ }^{3}$ Exposure to radio, television, or newspapers/magazines at least once a week or cinema at least once a month
    ${ }^{4}$ For women, visits to parental/in-laws' home excluded

    * Percentage not shown; based on fewer than 25 unweight

[^21]:    ${ }^{1}$ Comprehensive knowledge means knowing that consistent use of condoms every time they have sex and having just one uninfected faithful sex partner can reduce the chance of getting HIV/AIDS, knowing that a healthy-looking person can have HIV/AIDS, and rejecting two common misconceptions about transmission or prevention of HIV/AIDS
    ${ }^{2}$ Sexual intercourse with a partner who was neither a spouse nor lived with the respondent
    ( ) Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases

[^22]:    na = Not applicable

    * Percentage not shown; based on fewer than 25 unweighted cases

[^23]:    ${ }^{1}$ A woman is classified as having hypertension if she has SBP $\geq 140 \mathrm{mmHg}$ or DBS $\geq 90 \mathrm{mmHg}$ at the time of the survey, or she is currently taking antihypertension medication to control her blood pressure. The term hypertension as used in this table is not meant to be a clinical diagnosis of the disease, but rather to provide an indication of the disease burden in the population at the time of the survey.

[^24]:    ( ) Based on 25-49 unweighted cases

[^25]:    na $=$ Not applicable

[^26]:    Note: Total includes women who don't know their caste/tribe, who are not shown separately.
    ${ }^{1}$ To the market, to the health facility, and to places outside the village/community
    ${ }^{2}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted, or fostered) with or without unrelated individuals.

[^27]:    () Based on 25-49 unweighted cases

[^28]:    Note: All women were asked about their experience of physical violence since age 15. Ever-married women were also asked about their experience of spousal physical violence at any age.
    ${ }^{1}$ Women can report more than one person who committed the violence
    ( ) Based on 25-49 unweighted cases

    * Percentage not shown; based on fewer than 25 unweighted cases
