## InTRODUCTION

The 2019-21 National Family Health Survey (NFHS-5), the fifth in the NFHS series, provides information on population, health, and nutrition for India and each state and union territory. Like NFHS-4, NFHS-5 also provides district-level estimates for many important indicators. All five rounds of NFHS surveys have been conducted under the stewardship of the Ministry of Health and Family Welfare (MoHFW), Government of India. MoHFW designated the International Institute for Population Sciences (IIPS), M umbai, as the nodal agency for the surveys. Funding for NFHS-5 was provided by the Government of India. Technical assistance and additional funding for NFHS-5 was provided by the USAID-supported Demographic and Health Surveys Program, ICF, USA. A ssistance for some of the Clinical, A nthropometric, and Biochemical (CAB) tests was provided by the ICMR and the National AIDS Research Institute (NARI), Pune.

Four survey questionnaires-household, woman's, man's, and biomarker-were used to collect information in 19 languages using Computer A ssisted Personal Interviewing (CAPI). All women age 15-49 and men age 15-54 in the selected sample households were eligible for interviewing. In the household questionnaire, basic information was collected on all usual members of the household and visitors who stayed in thehousehold the previous night, as well as socioeconomic characteristics of the household, water and sanitation, health insurance, and number of deaths in the household in the three years preceding the survey. Two versions of the woman's questionnaire were used in NFHS-5. The first version (district module), which collected information on women's characteristics, marriage, fertility, contraception, reproductive health, children's immunizations, treatment of childhood illnesses, and nutrition was fielded in theentire sample of NFHS-5 households. Information on these topics is available at the district, state, and national levels. In the second version of the questionnaire (state module), four additional topics, namely, sexual behaviour, HIV/ AIDS, husband's background and women's work, and domestic violence, were also included. This version was fielded in a subsample of NFHS-5 households designed to provide information only at the state and national levels. The man's questionnaire covered the man's characteristics, marriage, number of children, contraception, fertility preferences, nutrition, sexual behaviour, attitudes towards gender roles, HIV/ AIDS, and lifestyle. The biomarker questionnaire covered measurements of height, weight, and haemoglobin levels for children; height, weight, waist and hip circumference, haemoglobin levels, and finger-stick blood for additional CAB testing in a laboratory for women age 15-49 and men age 15-54; and blood pressure and random blood glucosefor women and men age 15 years and over. Questionnai re information and biomarkers were collected only with informed consent from the respondents.

TheN FHS-5 sample was designed to provide estimates of all key indicators at the national and state levels, as well as estimates for most key indicators at the district level (for all 707 districts in India, as on 31 M arch, 2017). The total sample size of approximately 610,000 households for India was based on the size needed to produce reliable indicator estimates for each district. The rural sample was selected through a two-stage sample design with villages as the Primary Sampling Units (PSUs) at the first stage (selected with probability proportional to size), followed by a random selection of 22 households in each PSU at the second stage. In urban
areas, there was also a two-stage sample design with Census Enumeration Blocks (CEB) selected at the first stage and a random selection of 22 households in each CEB at the second stage. At the second stage in both urban and rural areas, households were selected after conducting a complete mapping and household listing operation in the selected first-stage units.

Readers should be cautious while interpreting and comparing the trends as some States/ UTs may have smaller sample size. M oreover, at the time of survey, A yushman Bharat AB-PMJAY and Pradhan M antri Surakshit M atritva A bhiyan (PMSMA) were not fully rolled out and hence, their coverage may not have been factored in the results of the percentage of households with any usual member covered under a health insurance/ financing scheme and the percentage of mothers who received 4 or more antenatal care visits, respectively. Hence, the results should be interpreted with caution.

NFH S-5 fieldwork for Goa was conducted in all 2 districts of the state from 30 A ugust, 2019 to 26 N ovember, 2019 by the Nielsen India Pvt. Ltd. Information was collected from 1,856 households, 2,030 women age 15-49 (including 303 women interviewed in PSUs in the state module), and 313 men age 15-54.

This report presents the key findings of the NFHS-5 survey in Goa, followed by detailed tables and an appendix on sampling errors. At the time of finalization of this report, wealth quintiles for the country as a whole were not ready. Therefore, on finalization of the national report, the breakup of key indicators by wealth quintiles for all states will be provided as an additional document and uploaded on the official website of MoHFW and IIPS.

## Household Characteristics

Important household characteristics include household composition, housing characteristics, household possessions, access to a toilet facility, and education. The household characteristics reflect the environmental risk factors and behavioural outcomes of the household population, including their likely impact on health status.

## Household composition

In Goa, over two-fifths (41\%) of the households are in rural areas. On average, households are comprised of 3.9 members. Twenty-four percent of households are headed by women, with 22 percent of the population living in female-headed households.

Sixty-five percent of households in Goa have household heads who are Hindu. Eight percent of households have household heads who are Muslim and 28 percent of households have household heads who are Christian.

Five percent of households in Goa have household heads who belong to a scheduled caste, 9 percent belong to a scheduled tribe, and 21 percent belong to an other backward class. Sixty-five percent of household heads do not belong to a scheduled caste, a scheduled tribe, or an other backward class. The majority of households (67\%) are nuclear, and 43 percent of the population resides in non-nuclear households.

Less than onefifth (19\%) of Goa's population is under age 15; only 9 percent is age 65 and over. The overall sex ratio of the population is 1,027 females per 1,000 males, and the sex ratio of the population under 7 years of age is lower at 774 females per 1,000 males. Ninety-eight percent of persons have an A adhaar card.

Among children below 18 years of age, 4 percent have experienced the death of one or both parents. In all, 88 percent of children below 18 years of age live with both parents, 12 percent live with one parent (mostly with their mother), and the remaining less than 1 percent live with neither parent. Births of all children under 5 years of age were registered with the civil authorities, and 98 percent of children have a birth certificate.

## Death registration

All deaths of usual residents of households were registered with the civil authorities.

## Disability

The respondent to the Household Questionnaire provided information for all usual household members on whether or not they had any disability in specified domains. The domains of disability are hearing, speech, visual, mental, locomotor, and other. Less than 1 percent (0.7\%) of the de jure household population has any disability. The most prominent type of disabilities are hearing, speech, and mental ( $0.2 \%$ each). Men are slightly more likely than women to have any disability ( $0.9 \%$ versus $0.5 \%$ ). A negligible proportion ( $0.3 \%$ ) of household members age $0-4$ years are reported to have any disability, compared with 1-2 percent of household members in the older age groups.

## Housing characteristics

Ninetenths (90\%) of households in Goa live in a pucca house and all households have electricity. Ninety-eight percent of households in Goa have basic drinking water service, and same percentage of households use an improved source of drinking water, but only four-fifths of households have water piped into their dwelling, yard, or plot. Urban households ( $83 \%$ ) are more likely than rural households (75\%) to have water piped into their dwelling, yard, or plot. Ninety-one percent of households use an appropriate treatment method to make drinking water potable (mostly by boiling). A large majority ( $97 \%$ ) of households in Goa use a clean fuel for cooking.

> O nly four-fifths of households in G oa have water pi ped into their dwelling, yard, or plot.

## Access to toilet facility

Safe sanitation is one of the foundations of a healthy, comfortable, and dignified life. Households without proper sanitation facilities have a greater risk of diseases like diarrhoea, dysentery, and typhoid than households with improved sanitation facilities that are not shared with other households.

In Goa, only 3 percent of all households and 6 percent of rural households do not use an improved sanitation facility; they use open spaces or fields. Ninety-seven percent of households have access to toilet facility, with a much higher accessibility in urban areas (99\%) than in rural areas (94\%). A ccess to a toilet facility is high and ranges from 93 percent among scheduled tribe households to 98 percent among households which are not scheduled caste, scheduled tribe, or other backward class households. A ccess to toilet facility is 96 percent in N orth Goa ( $93 \%$ in rural areas) and 98 percent in South Goa district (96\% in rural areas).

## Selected household possessions

In Goa, 69 percent of households own a house ( $77 \%$ of rural households and $63 \%$ of urban households). Almost all (99\%) households in Goa havea mobile phone. Ninety-seven percent of households have a bank or post office account. Eighty-seven percent of households own either a motorcycle or a scooter. BPL cards are held by 26 percent of households. Irrigated land is owned by 4 percent of rural households and 3 percent of urban households. Overall, 10 percent of all households in Goa own agricultural land, and only six percent of households own farm animals.

## Background characteristics of respondents

Twenty-seven percent of women and 31 percent of men are in the 15 -24 age group, while 27 and 32 percent of women and men, respectively, are in the 25-34 age group. Forty-one percent of women and 37 percent of men are in rural areas.

In NFHS-5, literate persons are those who have either completed at least standard 9 or passed a simple literacy test conducted as part of the survey. A ccording to this measure, 92 percent of women age 15-49 and 94 percent of men age 15-49 are literate.

Six percent of women and 3 percent of men age $15-49$ have never been to school. However, only 48 percent of women age $15-49$ in Goa have completed 12 or more years of school ing, compared with 54 percent of men.

Media exposure is quite widespread among women and men in Goa. Ninety-four percent of men and 85 percent of women watch television at least once a week. However, men (59\%) are more likely than women (47\%) to read a newspaper or magazine at least once a week. Two percent of men and 8 percent of women are not regularly exposed to print media or other forms of media.

Women are more likely than men to be currently married ( $63 \%$ versus $49 \%$ ), while men aremore likely than women to benever married ( $51 \%$ versus $33 \%$ ). Threepercent of women arewidowed. A majority of female respondents are Hindus ( $66 \%$ ), while 25 percent are Christians, and 9 percent are Muslims.

Twenty-two percent of female respondents belong to an other backward class, while 6 percent belong to a scheduled caste. Ten percent of women and 16 percent of men belong to a scheduled tribe, while 56 percent of men and 62 percent of women age 15-49 do not belong to a scheduled caste, a scheduled tribe, or an other backward class.

Sixty-seven percent of women and 22 percent of men age $15-49$ were not employed in the 12 months preceding the survey. Seven percent of women and 4 percent of men were engaged in an agricultural occupation, whileonequarter of women and almost three-quarters (72\%) of men were employed in a non-agricultural occupation.

## Education

In NFHS-5, information related to preschool attendance has been collected for the first time, in addition to school attendanceamong children age $6-17$ years and educational attainment of other members of the household, including reasons for drop-out in the case of thosewho discontinued education.

## Preschool attendance

In India many children attend anganwadi centres that provide spaces for children to learn, play, eat nutritious food, and develop the skills needed for a lifetime of learning. Attending preprimary education, such as at an anganwadi centre, improves children's school readiness by it providing quality learning through interactive, play methods with qualified instructors. Also, parents or guardians can go to work at ease if children are enrolled in pre-primary education.

In Goa, 52 percent of boys and 59 percent of girls age 2-4 years attend preschool. Preschool attendance is lower among children in non-nuclear households (53\%) than children in nuclear households (57\%). Preschool attendance is a little higher among children in households headed by Hindus (56\%) than Christians (54\%). Preschool attendance among children not belonging to a scheduled caste, scheduled tribe or other backward class is 53 percent. Preschool attendance is the same in households with 6 or more members and 3-5 members (55\%). Overall, urban households (55\%) show slightly higher preschool attendance than rural households (54\%). Pre-
school attendance is much higher among children in North Goa district (64\%) than in South Goa district (42\%).

## School attendance among children

Ninety-six percent of children age 6-17 years in Goa attend school and there is no variation in urban areas and rural areas. School attendance is almost universal (99\%) at age $6-14$ years, but drops sharply to 88 percent at age 15-17 years. There is no gender disparity in school attendance in the 6-14 year age group; however, in the age group 15-17 years, boys are more likely than girls to attend (91 percent of boys compared with 85 percent of girls).

## Fertility

This section provides trends in the total fertility rate, age at marriage, pregnancy outcomes, teenage pregnancy, birth interval, the desire for more children, and son preference. NFHS-5 estimates on the median age at marriage, total fertility rate, and teenage motherhood illustrated in this section can help in setting benchmarks for the Sustainable Development Goals at the subnational level.

## Age at first marriage

In Goa, the median age at first marriage is 25.7 years among women age $30-34$ years and 25.4 years among women age $35-39$ years and $45-49$ years. Only 23 percent of women age $20-49$ years have never married, compared with 44 percent of men age 20-49. Only six percent of women age $20-24$ years got married before attaining the legal minimum age of 18 years, down from 10 percent in NFHS-4. Seventy-eight percent of women age 20-24 years are never married, compared with 98 percent of men in the same age group, showing that the age at marriage is much lower for women than men in Goa.

Fertility levels
The total fertility rate (TFR) in Goa is 1.3 children per woman, which is well below the replacement level of fertility. Fertility has decreased by 0.4 children between NFHS-4 and NFHS-5.

Thetotal fertility ratein urban areas, at 1.3 children per woman, and in rural areas, at 1.4 children per woman, are both much below the replacement level. Among births in the three years preceding the survey, 2 percent were of birth order four or higher, compared with 4 percent in NFHS-4.

Fertility Trends
Total fertility rate
(children per woman)

The greatest differentials in fertility are by religion, and caste/ tribe. At current fertility rates, Muslim women will have an average of 0.3 children less than Hindu women (a TFR of 1.2, compared with 1.5 ) and 0.2 children more than Christian women (aTFR of 1.0).

How does fertility vary with schooling?
Total fertility rate (children per woman)

## Pregnancy outcome

Eighty-five percent of last pregnancies in the five years preceding the survey ended in a live birth, and the remaining 15 percent terminated in foetal wastage (abortion, miscarriage, or stillbirth). Miscarriage is the most commonly reported type of foetal wastage, accounting for 11 percent of all pregnancies, and abortions accounted for 5 percent.

## Teenage pregnancy

A mong young women age 15-19 in Goa, 3 percent havealready begun childbearing, that is, they have already had a livebirth or are pregnant with their first child, which is the same as in NFHS4. The proportion of women who have started childbearing rises sharply from 2 percent at age 18 years to 8 percent among women age 19 years. The proportion who havestarted childbearing is much higher among young women who had 5-9years of schooling (6\%) than those with more number of years of schooling ( $2 \%$ and $1 \%$ among $10-11$ and 12 or more years of schooling, respectively).

## Birth intervals

The median interval between births in the five years before the survey in Goa is 43.3 months. Eight percent of births take place within 18 months of the previous birth and 19 percent occur within 24 months. Less than two-fifths (39\%) of all births occur within threeyears of the previous birth. Research shows that waiting at least three years between children reduces therisk of infant mortality and has a positive impact on maternal health.

## Less than tw o-fifths (39\%) of births in G oa occur within three years of the previous birth.

## Fertility preferences

Sixty-one percent of currently married women and 55 percent of men age 15-49 years want no more children, are already sterilized or have a spouse who is sterilized. A mong those who want another child, 39 percent of women and 32 percent of men would like to wait at least two years before the next birth. Eighty-nine percent of women and 95 percent of men consider the ideal family size to betwo or fewer children.

In Goa, there is a strong preference for sons. Six percent of women and 3 percent of men want more sons than daughters, but only 3-4 percent of men and women want more daughters than sons. However, equally about three-fifths (61\%) of women would like to have at least one son and at least one daughter while a little over four-fifths (81\%) of men would like to have at least one son and at least one daughter.

Women's desire for more children is strongly affected by their current number of sons. For example, among women with two children, 82 percent with 2 sons want no more children, compared with 73 percent with two daughters who want no more children. Notably, the proportion of currently married women with two children who want no more children irrespective of their number of sons have remained almost unchanged (at about 85\%) in the 4 years since NFHS-4 while this percentage for currently married men has decreased by 15 percentage points since NFHS-4.

Current sex composition of families with two living children
In Goa, unplanned pregnancies are fairly common. If all women were to have only the number of children they wanted, the total fertility rate would have been 1.2 children per woman, instead of the current level of 1.3 children per woman.

## Family Planning

The family planning section covers trends in contraceptive knowledge and current use, informed choice, and unmet need for family planning methods among women age $15-49$ years. It also includes information on men's attitude towards women using a contraceptive method. As in previous rounds of the survey, N FHS-5 provides estimates of the contraceptive prevalence rate and unmet need for family planning.

## Contraceptive knowledge and use

Knowledge of contraception is universal in Goa. However, some methods are still less well known. Only 45 percent of currently married women know about female condoms. Among all women, 71 percent know about emergency contraception.

The contraceptive prevalence rate (CPR) among currently married women age $15-49$ is 68 percent, substantial increase from NFHS-4 (26\%). The use of modern family planning methods (60\%) has also increased substantially from its level in NFHS-4 (25\%). The use of female sterilization has increased, from 16 percent to 30 percent between NFHS-4 and NFHS-5; the share of female sterilization in overall contraceptive use has

How many women use family planning?
Percentage of currently married women
 increased from 44 percent to 66 percent in the four years between NFHS-4 and NFHS-5. Contraceptive use in NFHS-5 increases sharply with age, from 58 percent for women age 20-24 to 71 percent for women age 30-39 and then decreases to 69 percent for women age 40-49.

In Goa, contraceptive use is much higher (72\%) in urban areas, than rural areas (61\%). Sixty-six percent of currently married women with no schooling use female sterilization, compared with only 17 percent of women with 12 or more years of schooling. Christian women ( $58 \%$ ) are less likely to use contraception than either Hindu (70\%) women or Muslim women (77\%).

Women in Goa are much more likely to use contraception if they already have a son. For example, among women with two children, 77 percent with at least one son use a method of family planning, compared with 66 percent of women with two daughters and no sons.

What contraceptive methods do women use? Currently married women

The most common modern spacing methods used by currently married women in Goa are condom/ Nirodh (23\%), followed by the pill (3\%) and IUD or PPIUD (2\%). In general, urban women and better-educated women are more likely than other women to use spacing methods.

Eighty-one percent of sterilized women had their sterilization operation in the public sector, mainly in a government or municipal hospital and the majority of condom/Nirodh ( $59 \%$ ) users get their supply from the private health sector or other source, including a shop. N onetheless, almost one-quarter (23\%) of users of condom/ $N$ irodh get their supply from the public sector.

The 12-month discontinuation rate for any reason is 55 percent for all contraceptive methods. Almost three-fifths (59\%) of users of modern spacing methods discontinued use within thefirst year after they adopted the method. The common reasons for discontinuation are other fertility related reason, side effects/ health concerns, and desire to become pregnant.

## Almost three fifths (59\%) of users of modern spacing methods discontinued use within the first year after they adopted the method.

## Informed choice

Women who know about all available contraceptive methods and their side effects can make better choices about what method to use. A large majority (91\%) of users of selected modern contraceptive methods were ever told by a health or family planning worker about other methods they could use, 85 percent were told about the possible side effects or problems with their method, and fewer (69\%) were told what to do if they experienced any side effects.

## Men's attitudes

Only 1 percent men age $15-49$ in Goa agree that contraception is women's business and a man should not have to worry about it and even less than 1 percent ( $0.3 \%$ ) of men think that women using contraception may become promiscuous. Four-fifths of men know that a condom, if used correctly, protects against pregnancy most of the time.

## Unmet need

Unmet need for family planning is defined as the percentage of currently married women who either want to space their next birth or stop childbearing entirely, but are not using contraception. According to this definition, 8 percent of currently married women have an unmet need for family planning, a substantial declinesince NFHS-4(18\%). Currently, 89 percent of the demand for family planning is being satisfied and 79 percent of the demand is being satisfied by modern methods.

Contraceptive Prevalence Rate by District
Percentage of currently married women

## Infant and Child Mortality

The mortal ity rate among children under age 5 years including neonatal, postneonatal and infant mortality rates is an important indicator that measures the overall wellbeing of a country. The infant mortality rate in Goa in NFHS-5 is estimated at 6 deaths before the age of one year per 1,000 live births, down from the NFHS-4 estimate of 13 , the NFHS-3 estimate of 15 , the NFHS-2 estimate of 37, and the NFHS-1 estimate of 32 .

## Trends in Infant Mortality <br> Deaths per 1,000 live births

## Maternal Health

M aternal health is an important aspect for the devel opment of any country in terms of increasing equity and reducing poverty. The survival and well-being of mothers is not only important in their own right, but is also central to solving broader economic, social, and developmental challenges. M aternal health care services are essential for the health and well being of mothers, as well as their children, affecting the overall population and its health and nutritional status. This section describes the utilization of antenatal care, delivery care, and postnatal care by women who reported their last births in the five years preceding the survey. It also shows the extent of male involvement in maternal health care.

## Antenatal care

A mong mothers who gave birth in the five years preceding the survey, al most all (99\%) received antenatal care for their last birth from a health professional ( $98 \%$ from a doctor and $1 \%$ from an auxiliary nurse midwife (ANM), lady health visitor (LHV), nurse, or midwife). One percent did not receive any antenatal care (ANC). Among mothers who gave birth in the five years preceding the survey, 98 percent registered the pregnancy for the most recent live birth. Among the registered pregnancies, all received a M other and Child Protection Card (MCP Card).

## Four or More Antenatal Care Visits by District

Percentage of last births in the past five years

Majority (70\%) of women received antenatal care during the first trimester of pregnancy, as is recommended. Rural women ( $76 \%$ ) are more likely to receive antenatal care during the first trimester of pregnancy than the urban women (67\%). Ninety-three percent of mothers had four or more antenatal care visits.

Since NFHS-4, there has been an increase in the percentage of mothers who had four or more antenatal care visits (from $89 \%$ to $93 \%$ ) and a huge drop in the proportion of women who had an antenatal check in the first trimester (from 84\% to 70\%). For almost all (99\%) of their last births, mothers received iron and folic acid (IFA) supplements, but only 88 percent consumed them for the recommended 100 days or more and only 65 percent consumed them for the newly recommended 180 days or more. Ninety-seven percent of last births were protected against neonatal tetanus through tetanus toxoid vaccinations given to the mother. Thirty-five percent of mothers took an intestinal parasite drug during pregnancy.

## N inety-three percent of mothers in G oa had at least four antenatal care visits for their last birth.

Among women with a live birth in the five years preceding the survey who met with a community health worker in the last three months of pregnancy for their most recent live birth, at least 95 percent received advice on each of five different areas (all received advice on breastfeeding and cord care, $97 \%$ on the importance of institutional delivery, $96 \%$ on keeping the baby warm, and $95 \%$ on family planning).

## How does appropriate antenatal care (ANC) vary with schooling? <br> Percentage of last births in the past five years

Note: Categories 'No schooling' and '<5 years complete' not shown since there are fewer than 25 unweighted cases.

In Goa, almost all women who received antenatal care for their last birth received each of the services needed to monitor their pregnancy: having their weight taken, their blood pressure measured, having a urine sampletaken, having a blood sampletaken, and having their abdomen examined.

A n ultrasound test was performed during 96 percent of pregnancies in the five years preceding the survey. Urban women were more likely to have an ultrasound test than rural women.

## Delivery care

All the births take place in a health facility (mostly in a government facility).

Are babies being delivered safely? Percentage of births in the past five years
Forty percent of births during the past 4 years were delivered by caesarean section. Almost half (49\%) of caesarean sections (19\% of all births) were emergency caesarean sections.

Among women who had a live birth in the five years preceding the survey that was delivered in a health facility, only 7 percent received financial assistance under Janani Suraksha Y ojana (JSY).
-NFHS-4 ■NFHS-5

## All children in Goa who were born in the past five years w ere born in a health facility.

## Postnatal care

Early postnatal care for a mother helps safeguard her health and can reduce maternal mortality. In Goa, 97 percent of mothers had a postnatal check after their last birth and 95 percent of mothers had a postnatal check within two days of the birth, as is recommended.

Almost all (97\%) of last births in the five years preceding the survey received a health check in the first two days after birth.

## Child Health

## Vaccination of children

Vaccinations are considered as the most cost-effective intervention that can improve the overall health of children. Eighty-two percent of children age 12-23 months received all basic vaccinations against six major childhood illnesses (tuberculosis, diphtheria, pertussis, tetanus, polio, and measles) at any time before the survey. However, 98 percent of children are at least partially vaccinated; only 2 percent have not received any vaccinations at all. Vaccinations were recorded from a vaccination card for a large majority (88\%) of children, which is a marginal drop since NFHS-4 (90\%).

Ninety-eight percent of children have received a BCG vaccination. However, 88 percent of children have received the recommended three doses of polio vaccine, 91 percent have received the three recommended doses of DPT or Penta vaccine, and 93 percent have been vaccinated against measles. There is considerable dropout between the first and third doses of DPT vaccine (from $98 \%$ to $91 \%$ ) and polio vaccine (from $98 \%$ to $88 \%$ ). It should benoted that the Penta vaccine was not widely available at the time of the NFHS-4 survey.

Trends in Vaccination Coverage
Percentage of children 12-23 months receiving vaccinations
■ NFHS-1 ■ NFHS-2 ■ NFHS-3 - NFHS-4 - NFHS-5

Between N FHS-4 and NFHS-5, there was an increase in vaccination coverage for three doses of hepatitis B (from 85\% to 93\%) and slight decline for three doses of DPT (from 94\% to 91\%), three doses of polio (from 93\% to 88\%) measles (from 97\% to 93\%), and BCG (from $100 \%$ to $98 \%$ ). In addition, 97 percent of children have received at least one dose of hepatitis B vaccine, and 93 percent of children have received all three recommended doses of hepatitis B vaccine.

## Childhood illnesses

In the two weeks before the survey, 1 percent of children under age five years had symptoms of an acute respiratory infection (cough accompanied by (1) short, rapid breathing that is chest related and/ or (2) difficult breathing that is chest related).

Eighteen percent of children under age five were reported to have had fever in the two weeks preceding the survey; 87 percent of these children were taken to a health facility or provider for treatment.

Overall, 3 percent of children under agefive years had diarrhoea in the two weeks preceding the survey. Almost all (99\%) of mothers of young children haveheard of oral rehydration salt (ORS) packets for the treatment of diarrhoea.

## Integrated Child Development Services (ICDS)

The ICDS programme provides nutrition and health services for children under age six years and pregnant or breastfeeding women, as well as preschool activities for children age 3-5 years. These services are provided through community-based anganwadi centres.

## How many children received anganwadi centre services?

Percentage of age-eligible children receiving services

Seventy percent of children under 6 years received services of some kind from an anganwadi centre in the 12 months preceding the survey. The most common services that age-eligible children receive are supplementary food and growth monitoring ( $66 \%$ each), health check-ups (58\%), and early childhood care or preschool (45\%). The servicethat is least likely to be accessed is immunizations (40\%). Two-thirds of mothers of children who were weighed at an anganwadi centre received counselling from an anganwadi worker or an ANM. Among children under age 6 years, at least 9 in 10 of their mothers received any service from an anganwadi centre during pregnancy (90\%), and while breastfeeding (89\%).

## Breastfeeding, Nutrition, and Anaemia

## Infant feeding

N inety-three percent of children born in the 2 years beforethe survey are put to the breast within the first day of life, but only 62 percent started breastfeeding in the first hour of life (as recommended). While exclusive breastfeeding indicators show an improvement since N FHS-4, many infants are still deprived of the highly nutritious first milk (colostrum) and the antibodies it contains.

It is recommended that nothing be given to children other than breastmilk even in the first three days when the milk has not begun to flow regularly because prelacteal feeds limit the frequency of suckling by the infant and expose the baby to the risk of infection. However, 10 percent of children are given something other than breastmilk during the first three days.

WHO has several recommendations for infant and young child feeding (IYCF) practices for children age $6-23$ months. The key IYCF indicators measure the adequacy of dietary diversity and meal frequency for breastfed and non-breastfed children. Only 45 percent each of children age $6-23$ months are fed the recommended minimum number of times per day and the appropriate number of food groups. Less than onequarter (22\%) are fed according to all three recommended practices.

Micronutrient deficiency is a major contributor to childhood morbidity and mortality. Vitamin A is an essential nutrient for the immune system. Severe vitamin A deficiency (VAD) can cause eye damage and a higher risk of dying from measles and diarrhoeal disease. The Government of India recommends that children under 5 years of age receive vitamin A supplements every six months, starting at age 9 months. In Goa, 92 percent of children age $9-35$ months were given a vitamin A supplement in the past six months, but only 55 percent of children age $6-23$ months ate vitamin A-rich foods during the day or night before the survey.

Iron deficiency is a primary cause of anaemia. Eating foods rich in iron and taking iron supplements can help prevent anaemia. Thirty-two percent of children age 6-23months ateironrich foods during the day or night before the survey; however, over half of children (53\%) in the same age group were given iron supplements in the week before the survey.

## Children's nutritional status

Childhood undernutrition contributes to childhood diseases and is a major cause of child mortality in India. Twenty-six percent of children under age five years are stunted, or too short for their age, which indicates that they have been undernourished for some time. Nineteen percent are wasted, or too thin for their height, which may result from inadequate recent food intake or a recent illness causing weight loss, and 8 percent are severely wasted. Slightly less than onequarter (24\%) of children are underweight, which takes into account both chronic and acute undernutrition.

The percentage of children who are stunted increased from 20 percent to 26 percent while percentage of children who are underweight remained almost unchanged in the 4 years between NFHS-4 and NFHS-5. In the same period, the percentage of children who are wasted declined from 22 percent to 19 percent. However, the continuing high levels of undernutrition are still a major problem in Goa.

Differences in the levels of malnutrition are more pronounced for several background characteristics. The level of undernutrition is relatively high for rural children than urban children and among male children than female children on all three nutritional status measures.

## Adults' nutritional status

Malnutrition refers to deficiencies, excesses, or imbal ances in a person's intake of energy and/ or nutrients, and includes undernutrition as well as overweight and obesity. The body mass index (BMI), which is defined as a person's weight in kilograms divided by the square of the person's height in metres, is a measure that indicates the nutritional status in adults.

In Goa, 50 percent of women and 45 percent of men are either too thin or overweight or obese. Among women age $15-49$, the proportion overweight or obese is 36 percent, marginal increase since NFHS-4. M ore men are overweight or obese (33\%) than thin (13\%), which is similar to the pattern observed in NFHS-4. Fourteen percent of women in Goa are too thin. Half of women and more than half of men (55\%) are at a heal thy weight for their height.

Undernutrition is particularly common in the younger agegroups (especially age 15-19), in rural areas, and among scheduled caste women and scheduled tribe women. Overweight or obesity is most prevalent in older adults, and urban women.

For the first time, the 2019-21 NFHS measured the waist circumference and hip circumference of women and men age $15-49$ years. This information was used to calculatethewaist-to-hip ratio (WHR). WHR helps to identify the distribution of body fat and predicts abdominal obesity. A bdominal obesity is associated with an increased risk of type 2 diabetes mellitus, myocardial infarction, stroke, and premature death.

A little over half (51\%) of women and 35 percent of men have a waist-to-hip ratio (WHR) that puts them at a substantially increased risk of metabolic complications. The proportion of adults with an increased risk WHR increases with age, from 36 percent for women age 15-19 to 61 percent for women age 40-49, and from 23 percent for men age 20-29 to 57 percent for men age 40-49. The proportion of women having a substantially increased risk WHR is the same (51\% each) in urban areas and rural areas and among men it is only somewhat higher in rural areas (38\%) than in urban areas (34\%).

How many women are at a healthy weight for their height?
Percent distribution of women Percent distribution of women

The use of iodized salt prevents iodine deficiency, which can lead to miscarriage, goitre, and mental retardation. Ninety-eight percent of households with tested salt were using iodized salt at the time of the survey.

## Anaemia

A naemia is a condition that is marked by low levels of haemoglobin in theblood. Iron deficiency is estimated to be responsible for about half of all anaemia globally, but anaemia can also be caused by malaria, hookworms and other helminths, other nutritional deficiencies, chronic infections, and genetic conditions. Anaemia can result in maternal mortality, weakness, diminished physical and mental capacity, increased morbidity from infectious diseases, perinatal mortal ity, premature delivery, low birth weight, and (in children) impaired cognitive performance, motor development, and scholastic achievement. Anaemia is a major health problem in Goa, especially among women and children.

Morethan half ( $53 \%$ ) of children age 6 -59 months are anaemic. This includes 26 percent who are mildly anaemic, 25 percent who are moderately anaemic, and 2 percent who have severe anaemia. The overall prevalence of anaemia in children increased from 48 percent in NFHS-4 to 53 percent in NFHS-5. The prevalence of anaemia among girls is higher (59\%) than boys (48\%) in NFHS-5. Children of mothers who have anaemia are much more likely to be anaemic. Although anaemia levels vary somewhat
 according to background characteristics, anaemia among children is widespread in every group. Half of children in Goa are anaemic even if their mother has 12 or more years of schooling.

Thirty-nine percent of women in Goa have anaemia, including 23 percent with mild anaemia, 15 percent with moderate anaemia, and 1 percent with severe anaemia. Anaemia is particularly high among urban women, women age 15-19, women with less than 10 years of schooling, Muslim women, and scheduled caste women, but anaemia exceeds 32 percent for every group of women. A naemia among women has increased by 8 percentage points since NFHS-4. Over one-tenth ( $13 \%$ ) of men in Goa are anaemic. Men age 30-39 and in urban areas are particularly likely to be anaemic.

## Adult Health and Health Care

## Tuberculosis

Tuberculosis is an infectious disease caused by a type of bacterium called Mycobacterium tuberculosis, which primarily affects the lungs. Tuberculosis is transmitted from person to person through the air, and people with lowered immunity, HIV, mal nutrition, diabetes, and those who use tobacco or al cohol have higher chances of getting tuberculosis. Tuberculosis is both preventable and curable, however mortality is high if not treated properly. In Goa, 329 persons per 100,000 are estimated to have medically treated tuberculosis, based on reports from household respondents. The prevalence of medically treated tuberculosis is lower among women (259) than among men (400) and is higher in rural areas (353) than in urban areas (312).

Almost all (98\% each) of women and men have heard of tuberculosis, but even among those who have heard of tuberculosis, 94 percent of women and 91 percent of men know that it is spread through the air by coughing or sneezing. Onequarter of women and almost one-fifth (19\%) of men have misconceptions about how tuberculosis is spread. Overall, 96 percent of women and 94 percent of men know that tuberculosis can becured, and only 3 percent of women and almost half (49\%) of men say that if a family member had tuberculosis, they would want to keep it a secret.

## Diabetes, asthma, goitre, heart disease, and cancer

According to self-reports, 4,139 women and 1,648 men age 15-49 per 100,000 have diabetes. Overall, 389 women and 315 men per 100,000 have asthma. Asthma is considerably higher in urban areas than rural areas. Goitre is more common than asthma among women ( 2,548 women per 100,000 ). The prevalence of any heart disease is higher among women ( 426 per 100,000) than among men. A mong the five diseases, cancer is the least common, with 193 women per 100,000 reportedly having cancer.

## Blood pressure (hypertension)

Blood pressure is the force exerted by circulating blood against the arterial walls. Hypertension or high blood pressure is a condition in which the blood vessels have persistently raised pressure. Hypertension is a major risk factor for cardiovascular diseases, chronic kidney diseases, and brain diseases, and it is a major cause of premature deaths worldwide. Some of the risk factors for developing hypertension are unhealthy diets, physical inactivity, alcohol and tobacco consumption, and excess body weight.

Thirteen percent of women age $15-49$ in Goa have hypertension, including 7 percent with Stage 1 hypertension and 1 percent with Stage 2 and less than 1 percent ( $0.3 \%$ ) with Stage 3 hypertension. Hypertension also includes women with normal blood pressure who are taking medicine to lower their blood pressure. Fifty-eight percent of women have normal blood pressure.

The prevalence of hypertension among men age 15-49 is somewhat higher than among women. Eighteen percent of men in Goa have hypertension, including 14 percent with Stage 1 hypertension, 2 percent with Stage 2 hypertension, and 1 percent with Stage 3 hypertension. Hypertension also includes men with normal blood pressure who aretaking medicine to lower their blood pressure. Thirty-seven percent of men have normal blood pressure. For both women and men, hypertension increases with age.

## Blood glucose

Diabetes mellitus is a chronic metabolic disease characterized by elevated levels of blood glucose. Diabetes over a period of time can cause severe damage to the heart, blood vessels, retina, kidneys, and nerves, and it puts sufferers at increased risk of various infectious and noninfectious diseases. Early diagnosis, determined by blood glucose testing, and adequate treatment are the key steps for managing diabetes and its complication. NFHS-5 has included random blood glucose measurement using capillary blood among women and men age 15 and above.

In Goa, six percent of women age 15-49 have high blood glucose levels, and 5 percent have very high blood glucose levels. In comparison, 6 percent of men age 15-49 have high and 9 percent have very high blood glucose levels. Women and men in older age groups have relatively high blood glucose levels.

Men are more likely than women to have normal blood glucose levels and are taking medicine to lower their blood glucose level ( $3 \%$ of men versus $0.7 \%$ of women). Eleven percent of women and 18 percent of men have blood glucose levels $\geq 140 \mathrm{mg} / \mathrm{dl}$ and are taking medicine to lower their blood glucose level.

## Screening tests for cancer

Cancer is a group of diseases with high mortality, and it is the second leading cause of death globally. The chances of successful treatment of cancer increase if diagnosed early. One way of early detection is screening, which is the identification of unrecognized disease by using simple tests or examinations among those individuals who have the disease but do not yet have symptoms. NFHS-5 collected information about whether respondents had ever undergone screening test for cancer of the oral cavity, breast, and cervix.

In Goa, only 1 percent each of women age $15-49$ have ever undergone a screening test for cancer of the cervix, breast cancer, and oral cavity. Men are slightly more (2\%) likely than women to have ever undergone a screening test for cancer of the oral cavity.

## Health insurance

Universal access to health care is the absence of any barriers in health care, including economic barriers. Adequate coverage by health insurance protects a person from financial hardships because of the costs of health care. Despite the emergence of a number of health insurance/ financing schemes in India, only 66 percent of households in Goa have any kind of health insurance/ financing scheme that covers at least one member of the household. Health insurance/ financing scheme coverage is higher in rural areas (68\%) than urban areas (65\%). In Goa, three types of programmes dominate: the State health insurance scheme, the Employees' State Insurance Scheme (ESIS), and the Central Government Health Scheme (CGHS).

Over two-thirds (68\%) of women and about threequarters (73\%) of men age $15-49$ in Goa are covered by any health insurance/ financing scheme. Health insurance/ financing scheme coverage is much higher among men and women in rural areas than urban areas.

## Tobacco and alcohol use

One-quarter of men, but only 1 percent of women, age $15-49$ use some form of tobacco. Tobacco products mostly used by men are cigarettes (13\%), and gutkha or paan masala with tobacco (12\%). A mong men, the use of any form of tobacco is slightly higher in urban areas (28\%) than in rural areas (19\%).

In Goa, among adults age 15-49, 59 percent of men and less than 5 percent of women drink al cohol. Sixty-one(61\%) percent of men drink alcohol in rural areas which is higher than in urban areas (58\%). M ost men who drink alcohol drink it less than once a week (45\%) and about oncea week (35\%).

## HIVIAIDS

This section presents the findings from NFHS-5 on HIV/ AIDS knowledge and attitudes, prior HIV testing, and the prevalence of sexually transmitted infections (STIs), as well as sexual behaviour of the adult and youth population. Questions on HIV/ AIDS were included only in the subsample of households selected for the state module.

## Awareness of HIV or AIDS

All men and almost all (99\%) women in Goa have heard of HIV or AIDS.

## Knowledge of prevention and transmission

Men aremuch morelikely than women to know how HIV/ AIDS istransmitted and how to keep from getting it. For example, 90 percent of women know that consistent condom use can help to prevent HIV/ AIDS, compared with 98 percent of men, and 85 percent of women know that having just one uninfected partner who has no other partners can reduce the chance of getting HIV/ AIDS, compared with 98 percent of men.

Only 49 percent of women and 67 percent of men in Goa have a 'comprehensive knowledge' about HIV/ AIDS. This means they know that consistent use of condoms every time they have sex and having just one uninfected sex partner who has no other partners can reduce the chance of getting HIV/ AIDS, they know that a healthy-looking person can have HIV/ AIDS, and they reject two common misconceptions about the transmission or prevention of

Do people know how to prevent HIV/AIDS? Percentage of women and men age 15-49
 HIV/ AIDS.

## HIV-related stigma

Four-fifths of women and men in Goa would be willing to take care of a relative with HIV/ AIDS in their home. M ore than 9 out of 10 women ( $91 \%$ ) and men (95\%) say that a female teacher who has HIV/ AIDS but is not sick should be all owed to continue teaching. Eighty percent of women and 83 percent of men say that they would buy fresh vegetables from a shopkeeper with HIV/ AIDS. Seventy-eight percent of women and only 38 percent of men say that if a family member got infected with HIV/ AIDS, they would not want to keep it a secret. An almost equal proportion of women (91\%) and men (93\%) say that an HIV positive student should be allowed to attend school with students who are HIV negative. Sixty-nine percent of women and 57 percent of men think that people living with HIV/ AIDS should be treated in the same public hospital as persons who are HIV negative. An almost equal proportion of women (86\%) and men (87\%) think that people living with HIV should be allowed to work in the same office with people who are HIV negative.

HIV testing prior to NFHS-5, blood transfusions, and safe injections About half of women (49\%) and 29 percent of men age 15-49 had ever been tested for HIV prior to NFHS-5. Women and men in rural areas are somewhat more likely to have ever been tested for HIV prior to NFHS-5 than urban women and men.

## About half of women (49\%) and 29 percent of men age 15-49 had ever been tested for HIV prior to NFHS-5.

In Goa, 4 percent of women and 20 percent of men haveever had a blood transfusion. Women are more likely than men to have received an injection in the past 12 months ( $57 \%$ of women, compared with $40 \%$ of men). A disposable syringe was used for injections for 91 percent of adults who received an injection in the past 12 months.

## Sexual Behaviour

NFHS-5 included questions on respondents' sexual behaviour. Respondents were asked about their age at first sex, their current and previous sexual partners, higher-risk intercourse, and condom use. In addition, men were asked whether they had paid for sex in the past year. These questions are sensitive and subject to reporting bias, so the results should be interpreted with caution.

## Higher-risk behaviour

Higher-risk sex is sexual intercourse with someone who is neither a spouse nor a cohabiting partner. Among those who had sex in the past 12 months, only 9 percent of women and 17 percent of men reported having had higher-risk sex during the past 12 months. The percentage of men who had higher-risk sexual intercourse in the past 12 months is somewhat higher (19\%) in urban areas than in rural areas (13\%). Only 2 percent of men said that they had multiple sex partners in the past 12 months. Four percent of men said they had paid for sex in the past year.

## Women's Empowerment

Empowering women and promoting gender equality in every sphere of life are essential to improving their lives and achieving the Sustainable Development Goals. NFHS-5 has collected information related to women's empowerment and autonomy, including menstrual hygiene, employment and earnings, decision-making, ownership of assets, gender role attitudes, and domestic violence.

## Women's hygiene

Using a hygienic method of menstrual protection is important for women's health and personal hygiene. In N FHS-5, young women age 15-24 were asked what method or methods they use for menstrual protection, if anything. In Goa, 93 percent use sanitary napkins, 34 percent use cloth, and 4 percent use locally prepared napkins. Overall, 97 percent of women age $15-24$ use a hygienic method of menstrual protection, up from 89 percent in NFHS-4.

## Employment and earnings

Only one-third of all women age 15-49, compared with 78 percent of men, wereemployed in the 12 months preceding the survey. A mong employed women, 96 percent earned cash, including 3 percent who earned both cash and in-kind. Four percent were not paid at all. All men who were employed earned cash. A large majority ( $80 \%$ ) of employed women work in nonagricultural occupations, compared with 94 percent of employed men.

A mong currently married women who work and are paid in cash, 99 percent decide how their earnings will be used, either alone or jointly with their husbands. Two-fifths (42\%) of women who work for cash and whose husbands earn in cash say that they earn more than or about the same as their husbands. Forty-two percent of currently married men who have wives who have cash earnings report that they aloneor jointly with their wives decidehow her earnings areused, and one-fifth of men who have cash earnings and whose wives havecash earnings say that their wife earns more than or about the same as them.

## O nly one-third of all women age 15-49 were employed in the 12 months preceding the survey.

## Decision making

Currently married women were asked who makes decisions about their own health care, major household purchases, and visits to their own family or relatives. Between 86 to 89 percent of women say that they aloneor jointly with their husband participatein decisions about their own health care, about visits to their own family and relatives and about major household purchases. Overall, 81 percent currently married women participate in making all three of these decisions, and 7 percent do not participate in making any of the three decisions.

In the case of currently married men, they are much morelikely than women to report that they alone or jointly with their wives participated in making decisions about their own health care (99\%) and 96 percent participated in decisions about major household purchases. Two percent of men did not participate in making either of these decisions.

## Other indicators of women's empowerment

In Goa, 64 percent of women have money that they can decide how to use. The proportion of women who have money that they can decide how to use is higher among rural (66\%) than urban (62\%) women, and is highest among women who are employed for cash (89\%) than any other group of women.

## Eighty-eight percent of women have a bank or savings account that they themselves use.

Eighty-eight percent of women have a bank or savings account that they themselves use. Women's knowledge and use of microcredit programmes is limited. Seventy-five percent of women know of a microcredit programme in their area, but only 10 percent have ever taken a loan from a microcredit programme.

Nearly half of women (48\%) who have a mobile phone use it for financial transactions. Urban women aremore (56\%) likely to use a mobile phone for financial transactions, than rural women $(38 \%)$. This percentage increases with education. Threefifths of employed women and have a mobile phone use a mobile phone for financial transactions, compared with 42 percent of unemployed women who have a mobile phone.

## Ownership of assets

Less than onequarter of women (23\%) and men (21\%) age 15-49 in Goa own a house alone or jointly with someone else, and 9 percent of women and 5 percent of men own land alone or jointly with someone else.

> Twenty-three percent of women own a house alone or jointly with someone else, and 9 percent of women ow n land alone or jointly with someone else.

In Goa, 91 percent of women have a mobile phone that they themselves use, and among women who have a mobile phone that they themselves use, 94 percent can read SM S messages. Ninetyfive percent of urban women have a mobile phone they themselves use, compared with 87 percent of rural women.

## Ninety-one percent of women in Goa have a mobile phone that they themselves use.

## Gender-role attitudes

Over one-third (35\% each) of women and men agree that a husband is justified in hitting or beating his wife under some circumstances. Women are most likely to agree that wife beating is justified if a woman shows disrespect for her in-laws (30\%), followed by if sheneglects the house or children (20\%) and if he suspects her of being unfaithful (16\%). Men are most likely to agree that wife beating is justified in some circumstances, especially if the wife shows disrespect for in-laws (30\%) or if he suspects her of being unfaithful (29\%), and if she neglects the house or children (12\%).

Ninety percent of women and 93 percent of men believe that a woman is justified in refusing to have sex with her husband if she knows he has a sexually transmitted disease, if she knows he has intercourse with other women, and if she is tired or not in the mood. Eighty-nine percent of men agree that if a wife refuses to have sex with her husband he does not have a right to get angry and reprimand her, refuse to give her financial support, use force to have sex even if she doesn't want to, or have sex with another woman.

## Domestic Violence

The World Health Organization recognizes that violence against women, particularly domestic or spousal violence, is a major public and clinical health problem and a violation of women's human rights, which also reflects the scale of gender inequality and discrimination against women. Theconsequences of violenceon physical, mental, sexual, and reproductivehealth often last a lifetime. NFHS-5 collected information on domestic violence from women age 18-49, related to behaviours of her husband that cause physical, sexual or emotional harm, induding physical violence, sexual coercion, emotional abuse, and controlling behaviours. Information was also collected on violence during pregnancy and help seeking behaviour for any violence experienced.

In Goa, 20 percent of women age 18-49 have ever experienced physical violence, and 4 percent have ever experienced sexual violence. In all, 20 percent of women experienced physical or sexual violence and 3 percent experienced both physical and sexual violence.

## O ne-fifth of ever-married women age 18-49 in G oa have experienced physical or sexual violence.

## Violence during pregnancy

Two percent of women age 18-49 who have ever been pregnant have ever experienced physical violence during one or more of their pregnancies. Rural women (3\%) are more likely to experience violence during pregnancy than urban women (1\%).

## Spousal violence

In Goa, 7 percent of ever-married women age 18-49 have experienced any form of physical violence committed by their husband, 5 percent have experienced any form of sexual violence committed by their husband, and 6 percent have experienced any form of emotional violence committed by their husband. Seven percent of ever-married women report having been slapped by their husband. Four percent report being pushed, shaken, or having something thrown at them. Three percent experienced having their arm twisted or hair pulled, 2 percent report being punched with a fist or something that could hurt her.

Five percent of ever-married women age 18-49 report that their husbands have physi cally forced them to have sex even when they did not want to, and 3 percent report that their husband forced them with threats or in any other way to perform sexual acts they did not want to perform. Overall, 8 percent of ever-married women have experienced spousal physical or sexual violence from their current husband or, if not currently married, from their most recent husband. Few ever-married women (2\%) reported that they have initiated violenceagainst their husband when he was not already beating or physically hurting them.

## Is alcohol use related to spousal physical or

 sexual violence?Percentage of ever-married women experiencing violence

Note: Categories "Husband drinks alcohol, but never gets drunk" and "Husband gets drunk often" not shown since there are fewer than 25 unweighted cases.

The experience of spousal violence is higher among women in rural areas (15\%) than in urban areas (6\%).

## Help seeking

Only 10 percent of women age 18-49 who have ever experienced physical or sexual violence sought help, while 15 percent never sought help but told someone. M ore than three-fourths of women (76\%) never sought help and never told anyone.

Table 1 Results of the household and individual interviews
Number of households, number of interviews with women and men, and response rates, according to residence, Goa, 2019-21

| Result | Residence |  | Total |

## Table 5 Access to a toilet facility

Percentage of households having access to a toilet facility by selected background characteristics, according to residence, Goa, 2019-21

| Background characteristic | Urban | Rural | Total |
| :--- | :---: | :---: | :---: |
|  |  |  |  |
| Religion of household head |  |  |  |
| $\quad$ Hindu | 98.4 | 91.4 | 95.6 |
| Muslim | 97.9 | $(95.2)$ | 97.2 |
| Christian | 99.1 | 99.4 | 99.2 |
| Caste/tribe of household head |  |  |  |
| $\quad$ Scheduled caste | 95.2 | $*$ | 93.6 |
| $\quad$ Scheduled tribe | 96.9 | 91.3 | 93.4 |
| Other backward class | 99.7 | 89.6 | 95.3 |
| Other | 99.0 | 96.8 | 98.2 |
| Total | 98.6 | 94.1 | 96.7 |

Note: Includes households that have any type of toilet facility that household members usually use and households that do not use a toilet facility but report that they have access to a toilet facility. Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes households with household head belonging to other religions and household head whose caste/tribe is not known, which are not shown separately.

Table 6 Access to a toilet facility by district
Percentage of households having access to a toilet facility by district, according to residence, Goa, 2019-21

|  | Residence |  |  |
| :--- | :---: | :---: | :---: |
| District | Urban | Rural | Total |
|  |  |  |  |
| North Goa | 98.4 | 92.9 | 96.1 |
| South Goa | 98.7 | 95.9 | 97.6 |
| Goa | 98.6 | 94.1 | 96.7 |

Note: Includes households that have any type of toilet facility that household members usually use and households that do not use a toilet facility but report that they have access to a toilet facility.

Table 7 Household possessions and land ownership
Percentage of urban, rural, and total households and de jure population possessing various household goods, means of transport, agricultural land, a house, and farm animals and having a bank/post office account, a health insurance/financing scheme, a BPL card, and a long-lasting insecticide-treated (LLIN) mosquito net, Goa, 2019-21

| 15-17 years | 89.3 | 94.0 | 91.0 | 82.5 | 87.7 | 84.7 | 86.2 | 90.8 | 88.0 |
| 6-14 years | 99.8 | 98.2 | 99.2 | 98.3 | 98.8 | 98.5 | 99.1 | 98.5 | 98.9 |
| 6-17 years | 97.1 | 97.2 | 97.1 | 94.1 | 95.6 | 94.7 | 95.7 | 96.4 | 96.0 |
| Religion of household head |  |  |  |  |  |  |  |  |  |
| Hindu | 96.7 | 96.8 | 96.7 | 95.1 | 94.3 | 94.8 | 96.0 | 95.6 | 95.8 |
| Muslim | 96.1 | * | 96.1 | 87.0 | * | 89.8 | 91.6 | (96.8) | 93.1 |
| Christian | 98.5 | 98.6 | 98.5 | 97.4 | 98.1 | 97.7 | 98.0 | 98.4 | 98.2 |
| Caste/tribe of household head |  |  |  |  |  |  |  |  |  |
| Scheduled caste | (98.1) | * | (98.4) | (87.5) | * | (89.5) | 93.5 | * | 94.5 |
| Scheduled tribe | (92.0) | (97.7) | 95.2 | (87.6) | (97.3) | 93.7 | 90.2 | 97.5 | 94.6 |
| Other backward class | 95.7 | (100.0) | 97.7 | 96.5 | 96.1 | 96.3 | 96.1 | 98.1 | 97.0 |
| Other | 98.1 | 98.2 | 98.1 | 93.1 | (98.9) | 95.1 | 96.0 | 98.5 | 96.8 |

Note: In this table, children's age refers to their age at the start of the 2019-20 school year (assumed here to be April 2019). Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes children in households with household head belonging to other religions, who are not shown separately.

Table 11 Children's living arrangements and orphanhood
Percent distribution of de jure children under Age 18 by their living arrangements, and percentage of children with one or both biological parents dead, according to background characteristics, Goa, 2019-21
$\left.\begin{array}{lccccccc}\hline & & \begin{array}{c}\text { Living with } \\ \text { mother but } \\ \text { not with } \\ \text { father }\end{array} & \begin{array}{c}\text { Living with } \\ \text { father but not } \\ \text { with mother }\end{array} & \begin{array}{c}\text { Not living } \\ \text { with either } \\ \text { parent }\end{array} & & & \begin{array}{c}\text { Percentage } \\ \text { with one or } \\ \text { Total parents } \\ \text { dead } 1\end{array}\end{array} \begin{array}{c}\text { Number of } \\ \text { children }\end{array}\right]$
${ }^{1}$ Includes children with father dead, mother dead, both parents dead, and one parent dead but missing information on survival status of the other parent.

Table 12 Birth registration of children under age 5
Percentage of de jure children under age 5 years whose birth was registered with the civil authorities, according to background characteristics, Goa, 2019-21

| Background characteristic | Percentage of children whose birth was registered |  |  | De jure children |
| :---: | :---: | :---: | :---: | :---: |
|  | Registered, has a birth certificate | Registered, does not have a birth certificate | Total registered |  |
| Age |  |  |  |  |
| <2 | 96.1 | 3.9 | 100.0 | 145 |
| 2-4 | 98.4 | 1.6 | 100.0 | 228 |
| Sex |  |  |  |  |
| Male | 97.2 | 2.8 | 100.0 | 204 |
| Female | 97.8 | 2.2 | 100.0 | 169 |
| Residence |  |  |  |  |
| Urban | 97.5 | 2.5 | 100.0 | 236 |
| Rural | 97.6 | 2.4 | 100.0 | 138 |
| Total | 97.5 | 2.5 | 100.0 | 373 |

Table 13 Birth registration of children under age 5 by district
Percentage of de jure children under age 5 years whose birth was registered with the civil authorities, by district, Goa, 2019-21

|  | Percentage of children whose birth was <br> registered |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Registered, <br> has a birth <br> certificate | Registered, <br> does not <br> have a birth <br> certificate | Total <br> registered | De jure <br> children |
| District |  |  | 100.0 | 237 |
| North Goa | 98.2 | 1.8 | 100.0 | 136 |
| South Goa | 96.2 | 3.8 | 100.0 | 373 |
| Goa | 97.5 | 2.5 | 100 |  |

Table 14 Death registration
Among deaths of usual residents during the 3 years preceding the survey, percentage of deaths registered with civil authority by selected background characteristics, according to residence and sex, Goa, 2019-21

| Background characteristic | Urban |  |  | Rural |  |  | Total |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male | Female | Total | Male | Female | Total | Male | Female | Total |
| Religion of household head |  |  |  |  |  |  |  |  |  |
| Hindu | * | * | 100.0 | (100.0) | * | 100.0 | (100.0) | (100.0) | 100.0 |
| Christian | * | * | 100.0 | * | * | * | * | * | 100.0 |
| Caste/tribe of household head |  |  |  |  |  |  |  |  |  |
| Other backward class | * | * | * | * | * | * | * | * | 100.0 |
| Other ${ }^{1}$ | (100.0) | * | 100.0 | * | * | 100.0 | 100.0 | (100.0) | 100.0 |
| Total | (100.0) | (100.0) | 100.0 | (100.0) | (100.0) | 100.0 | 100.0 | 100.0 | 100.0 |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes deaths of persons from households with Muslim household head and from households with household head belonging to scheduled caste or scheduled tribe or whose caste/tribe is not known, which are not shown separately.
${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

Table 15 Death registration by district
Among deaths of usual residents during the 3 years preceding the survey, percentage of deaths registered with civil authority by district, according to residence and sex, Goa, 2019-21

| District | Urban |  |  | Rural |  |  | Total |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

na $=$ Not applicable
${ }^{1}$ Refers to women/men who can read a whole sentence or part of a sentence and women/men who completed standard 9 or higher (who are assumed to be literate)

Table 18 Fertility trends
Age-specific and total fertility rates and crude birth rates for the 3 years preceding the survey from NFHS-5, NFHS-4 and NFHS-3, by residence, Goa

| Age | NFHS-5 |  |  | NFHS-4 |  |  | NFHS-3 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Urban | Rural | Total | Urban | Rural | Total | Urban | Rural | Total |
| 15-19 | 0.017 | 0.011 | 0.014 | 0.022 | 0.006 | 0.016 | 0.033 | 0.013 | 0.025 |
| 20-24 | 0.063 | 0.044 | 0.055 | 0.093 | 0.043 | 0.074 | 0.090 | 0.081 | 0.086 |
| 25-29 | 0.076 | 0.087 | 0.080 | 0.127 | 0.112 | 0.122 | 0.123 | 0.135 | 0.128 |
| 30-34 | 0.059 | 0.073 | 0.064 | 0.058 | 0.099 | 0.074 | 0.082 | 0.095 | 0.087 |
| 35-39 | 0.035 | 0.046 | 0.039 | 0.037 | 0.035 | 0.036 | 0.023 | 0.033 | 0.027 |
| 40-44 | 0.003 | 0.011 | 0.006 | 0.004 | 0.008 | 0.006 | 0.004 | 0.007 | 0.005 |
| 45-49 | 0.000 | 0.000 | 0.000 | (0.003) | (0.005) | 0.004 | (0.000) | 0.000 | 0.000 |
| TFR (15-49) | 1.26 | 1.36 | 1.30 | 1.72 | 1.55 | 1.66 | 1.77 | 1.81 | 1.79 |
| CBR | 10.3 | 10.3 | 10.3 | 13.4 | 11.7 | 12.8 | 16.6 | 16.7 | 16.7 |

Note: Rates are for the period 1-36 months preceding the survey (approximately 2003-05 for NFHS-3, 2013-2015 for NFHS-4, and 20172019 for NFHS-5). Age-specific fertility rates are expressed per woman. Figures in parentheses are based on 125-249 unweighted woman-years of exposure.
TFR = Total fertility rate, expressed per woman
$C B R=$ Crude birth rate, expressed per 1,000 population

## Table 19 Fertility by background characteristics

Total fertility rate for the 3 years preceding the survey, percentage of women age 15-49 currently pregnant, mean number of children ever born to women age 40-49, and total wanted fertility by background characteristics, Goa, 2019-21

| Background characteristic | Total fertility rate | Percentage of women age 15-49 currently pregnant | Mean number of children ever born to women age 40-49 | Total wanted fertility rate |
| :---: | :---: | :---: | :---: | :---: |
| Residence |  |  |  |  |
| Urban | 1.26 | 2.2 | 1.9 | 1.19 |
| Rural | 1.36 | 2.0 | 1.9 | 1.24 |
| Schooling |  |  |  |  |
| No schooling | 1.48 | 1.4 | 2.9 | 1.34 |
| <5 years complete | (0.91) | 0.8 | (2.4) | (0.72) |
| 5-9 years complete | 1.95 | 2.7 | 1.9 | 1.82 |
| 10-11 years complete | 1.38 | 3.4 | 1.7 | 1.23 |
| 12 or more years complete | 1.26 | 1.5 | 1.7 | 1.21 |
| Religion |  |  |  |  |
| Hindu | 1.46 | 2.4 | 1.8 | 1.35 |
| Muslim | 1.21 | 3.0 | (2.9) | 1.09 |
| Christian | 0.98 | 0.9 | 1.8 | 0.93 |
| Caste/tribe |  |  |  |  |
| Scheduled caste | 1.65 | 1.7 | (2.1) | 1.57 |
| Scheduled tribe | 1.56 | 2.4 | 2.1 | 1.52 |
| Other backward class | 1.12 | 2.5 | 1.8 | 1.03 |
| Other | 1.28 | 2.0 | 1.9 | 1.19 |
| Total | 1.30 | 2.1 | 1.9 | 1.21 |

Note: Total fertility rates are for the period 1-36 months preceding the interview. Figures in parentheses are based on 125-249 unweighted woman-years of exposure for the fertility rates and 25-49 unweighted cases for the mean number of children ever born.

Table 20 Teenage pregnancy and motherhood
Percentage of women age 15-19 who have had a live birth or who are pregnant with their first child, and percentage who have begun childbearing, by background characteristics, Goa, 2019-21

| Background characteristic | Percentage of women age 15-19 who: |  | Percentage of women age 15-19 who have begun childbearing | Number of women |
| :---: | :---: | :---: | :---: | :---: |
|  | Have had a live birth | Are pregnant with first child |  |  |
| Age |  |  |  |  |
| 15-17 | 0.0 | 0.0 | 0.0 | 147 |
| 15 | 0.0 | 0.0 | 0.0 | 57 |
| 16 | (0.0) | (0.0) | (0.0) | 42 |
| 17 | (0.0) | (0.0) | (0.0) | 48 |
| 18 | 0.0 | 2.3 | 2.3 | 60 |
| 19 | 6.5 | 1.8 | 8.3 | 77 |
| Residence |  |  |  |  |
| Urban | 1.9 | 0.9 | 2.8 | 157 |
| Rural | 1.6 | 1.1 | 2.7 | 127 |
| Schooling |  |  |  |  |
| 5-9 years complete | 2.3 | 3.2 | 5.6 | 86 |
| 10-11 years complete | 2.3 | 0.0 | 2.3 | 87 |
| 12 or more years complete | 0.9 | 0.0 | 0.9 | 109 |
| Religion |  |  |  |  |
| Hindu | 1.9 | 1.5 | 3.3 | 192 |
| Muslim | (5.2) | (0.0) | (5.2) | 27 |
| Christian | 0.0 | 0.0 | 0.0 | 66 |
| Caste/tribe |  |  |  |  |
| Scheduled caste | (0.0) | (0.0) | (0.0) | 30 |
| Scheduled tribe | (1.9) | (0.0) | (1.9) | 32 |
| Other backward class | 1.2 | 2.3 | 3.6 | 60 |
| Other | 2.3 | 0.9 | 3.2 | 160 |
| Total | 1.8 | 1.0 | 2.7 | 284 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes women with no schooling or less than 5 years of schooling and women who don't know their caste/tribe, who are not shown separately.

Table 21 Birth order
Percent distribution of births to all women during the 3 years preceding the survey by birth order, according to background characteristics, Goa, 2019-21, and percent distribution of births to women by birth order, NFHS-4

| Background characteristic | Birth order |  |  |  | Total | Number of births |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | $\begin{aligned} & 4 \text { or } \\ & \text { more } \end{aligned}$ |  |  |
| Mother's current age |  |  |  |  |  |  |
| 20-29 | 72.6 | 19.7 | 7.7 | 0.0 | 100.0 | 95 |
| 30-39 | 49.8 | 37.7 | 8.6 | 4.0 | 100.0 | 103 |
| Residence |  |  |  |  |  |  |
| Urban | 55.3 | 35.5 | 9.3 | 0.0 | 100.0 | 131 |
| Rural | 65.5 | 24.0 | 6.0 | 4.6 | 100.0 | 89 |
| Mother's schooling |  |  |  |  |  |  |
| 5-9 years complete | (44.4) | (39.2) | (16.4) | (0.0) | 100.0 | 47 |
| 10-11 years complete | (54.2) | (36.5) | (9.3) | (0.0) | 100.0 | 50 |
| 12 or more years complete | 71.8 | 25.5 | 2.7 | 0.0 | 100.0 | 114 |
| Religion |  |  |  |  |  |  |
| Hindu | 60.0 | 29.9 | 7.5 | 2.6 | 100.0 | 159 |
| Christian | (61.5) | (34.7) | (3.8) | (0.0) | 100.0 | 40 |
| Caste/tribe |  |  |  |  |  |  |
| Scheduled tribe | (56.3) | (40.8) | (2.8) | (0.0) | 100.0 | 25 |
| Other backward class | (61.0) | (32.6) | (6.3) | (0.0) | 100.0 | 40 |
| Other ${ }^{1}$ | 59.1 | 28.9 | 9.1 | 3.0 | 100.0 | 138 |
| Total | 59.4 | 30.8 | 7.9 | 1.9 | 100.0 | 220 |
| NFHS-4 (2015-16) | 48.5 | 30.3 | 16.9 | 4.4 | 100.0 | 246 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes information on births to women age 15-19 or 40-49, women with no schooling or less than 5 years of schooling, Muslim women, and scheduled caste women, which is not shown separately.
${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

## Table 22 Birth intervals

Percent distribution of births during the 5 years preceding the survey by interval since the preceding birth, and median number of months since the preceding birth, according to background characteristics, Goa, 2019-21

| Background characteristic | Months since preceding birth |  |  |  |  |  | Total | Number of non-first order births | Median number of months since preceding birth |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 7-17 | 18-23 | 24-35 | 36-47 | 48-59 | 60 or more |  |  |  |
| Mother's current age |  |  |  |  |  |  |  |  |  |
| 20-29 | (16.7) | (21.4) | (27.1) | (9.9) | (15.1) | (9.7) | 100.0 | 42 | (27.4) |
| 30-39 | 4.3 | 8.5 | 17.5 | 21.2 | 14.0 | 34.6 | 100.0 | 103 | 47.5 |
| Residence |  |  |  |  |  |  |  |  |  |
| Urban | 8.8 | 11.3 | 18.9 | 16.0 | 17.2 | 27.8 | 100.0 | 105 | 43.8 |
| Rural | 6.5 | 10.8 | 21.0 | 21.5 | 12.6 | 27.6 | 100.0 | 60 | 42.8 |
| Mother's schooling |  |  |  |  |  |  |  |  |  |
| 5-9 years complete | (18.6) | (12.0) | (14.3) | (19.4) | (17.0) | (18.8) | 100.0 | 45 | (39.2) |
| 10-11 years complete | 4.0 | 6.7 | 19.1 | 23.3 | 12.1 | 34.8 | 100.0 | 47 | 44.6 |
| 12 or more years complete | 2.8 | 13.3 | 18.4 | 13.5 | 17.9 | 34.0 | 100.0 | 58 | 48.4 |
| Religion |  |  |  |  |  |  |  |  |  |
| Hindu | 8.3 | 10.5 | 20.4 | 19.3 | 14.7 | 26.8 | 100.0 | 108 | 42.8 |
| Christian | (0.0) | (15.5) | (17.9) | (10.9) | (18.7) | (37.1) | 100.0 | 35 | (48.7) |
| Caste/tribe |  |  |  |  |  |  |  |  |  |
| Other backward class | (10.4) | (4.2) | (6.5) | (24.6) | (5.8) | (48.5) | 100.0 | 25 | (55.7) |
| Other ${ }^{1}$ | 7.9 | 12.5 | 23.1 | 14.8 | 14.9 | 26.7 | 100.0 | 108 | 40.7 |
| Sex of preceding birth |  |  |  |  |  |  |  |  |  |
| Male | 6.9 | 12.4 | 19.5 | 13.2 | 19.4 | 28.6 | 100.0 | 92 | 44.3 |
| Female | 9.3 | 9.6 | 19.9 | 24.0 | 10.6 | 26.6 | 100.0 | 73 | 42.4 |
| Total | 7.9 | 11.2 | 19.7 | 18.0 | 15.5 | 27.7 | 100.0 | 165 | 43.3 |

Note: The interval for multiple births is the number of months since the preceding pregnancy that ended in a live birth. Figures in parentheses are based on 25-49 unweighted cases. Total includes information on births to women age 15-19 or 40-49, women with no schooling or less than 5 years of schooling, women belonging to Muslim or other religions, women belonging to scheduled caste or scheduled tribe or who don't know their caste/tribe, which is not shown separately.
${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

## Table 23 Fertility preferences by number of living children

Percent distribution of currently married women and men age 15-49 by desire for children, according to number of living children, Goa, 2019-21

| Desire for children | Number of living children ${ }^{1}$ |  |  |  |  | Total15-49 | $\begin{aligned} & \text { Total } \\ & \text { 15-54 } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Sterilized ${ }^{4}$ | * | (0.0) | 4.9 | * | * | 5.1 | 6.3 |
| Declared infecund | * | (0.0) | 0.0 | * | * | 0.0 | 1.0 |
| Missing | * | (0.0) | 0.0 | * | * | 0.0 | 0.0 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Number | 23 | 38 | 54 | 18 | 2 | 135 | 169 |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes women/men with 5 or more children, who are not shown separately.
na = Not applicable
${ }^{1}$ Includes current pregnancy of woman/wife
${ }^{2}$ Want next birth within 2 years
${ }^{3}$ Want to delay next birth for 2 or more years
${ }^{4}$ For Women: Includes both female and male sterilization and women who have had a hysterectomy
For Men: Includes male sterilization and men who mention in response to the question about desire for children that their wife has been sterilized

## Table 24 Desire not to have any more children

Percentage of currently married women and men age 15-49 who want no more children by number of living children, according to background characteristics, Goa, 2019-21, and by number of living children, NFHS-4

| Background characteristic | Women: Number of living children ${ }^{1}$ |  |  |  |  | Total | Men: Number of living children ${ }^{1}$ |  | Total |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes women/men with 5 or more children, who are not shown separately.
${ }^{1}$ Includes current pregnancy for women or wife's current pregnancy for men
${ }^{2}$ Means are calculated excluding respondents who gave non-numeric responses
Table 26 Indicators of sex preference
Percentage women and men age 15-49 who want more sons than daughters, percentage who want more daughters than sons, percentage who want at least one son, and percentage who want at least one daughter, according to background characteristics, Goa, 2019-21, and total for NFHS-4

| Number of users | 410 | 36 | 31 | 375 | 857 |

Note: All information in this table is based on women's reports. Table includes all users of modern contraceptive methods regardless of their marital status. Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. All modern methods include male sterilization, injectables, and emergency contraception, which are not shown separately.
IUD = Intrauterine device; PPIUD = Postpartum intrauterine device; AYUSH = Ayurveda, yoga and naturopathy, unani, siddha and homeopathy; UHC = Urban health centre; UHP = Urban health post; UFWC = Urban family welfare centre; CHC = Community health centre; PHC = Primary health centre; ANM = Auxiliary nurse midwife; ICDS = Integrated Child Development Services; ASHA = Accredited Social Health Activist; NGO = Nongovernmental organization; TBA = Traditional birth attendant
${ }^{1}$ Excludes standard days method, lactational amenorrhoea method (LAM), and "other" modern methods

## Table 32 Informed choice

Among women who are current users of selected modern contraceptive methods who started the last episode of use within the 5 years preceding the survey, percentage who were informed about possible side effects or problems of that method, percentage who were informed about what to do if they experienced side effects, percentage who were ever told by a health or family planning worker about other methods of family planning they could use, and percentage who were informed of all three (Method Information Index) by method, Goa, 2019-21

| Method | Percentage who were informed about side effects or problems of method used | Percentage who were informed about what to do if experienced side effects | Percentage who were informed by a health or family planning worker of other methods that could be used | Percentage who were informed about all three <br> (Method Information Index) | Number of women |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Female sterilization ${ }^{1}$ | 85.3 | 74.2 | 89.1 | 72.2 | 59 |
| Pill | (79.1) | (60.2) | (90.0) | (60.2) | 25 |
| Total | 85.2 | 69.2 | 91.1 | 68.0 | 100 |

Note: Table includes only the contraceptive methods separately shown in the table and excludes users who obtained their method from friends/relatives or husband. Figures in parentheses are based on 25-49 unweighted cases. Total includes users of IUD or PPIUD, who are not shown separately.
IUD = Intrauterine device; PPIUD = Postpartum intrauterine device
${ }^{1}$ Among women who were sterilized in the 5 years preceding the survey

Table 33 Twelve-month contraceptive discontinuation rates
Among women age 15-49 who started an episode of contraceptive use within the 5 years preceding the survey, percentage of episodes discontinued within 12 months, by reason for discontinuation and specific method, Goa, 2019-21

|  | Reason for discontinuation |  |  |  |  |  |  |  | Switched to another method ${ }^{4}$ | Number of episodes of use ${ }^{5}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Method | Method failure | Desire to become pregnant | Other fertility related reason ${ }^{1}$ | Side effects/ health concerns | Wanted more effective method | Other method related reason ${ }^{2}$ | Other <br> reason | $\begin{gathered} \text { Any } \\ \text { reason } \end{gathered}$ |  |  |

| All spacing methods ${ }^{7}$ | 1.1 | 9.4 | 20.4 | 10.4 | 7.0 | 1.8 | 8.0 | 58.0 | 6.2 | 1,194 |
| All methods | 1.0 | 8.9 | 19.2 | 9.8 | 6.6 | 1.7 | 7.6 | 54.8 | 5.8 | 1,264 |

Note: Figures are based on life table calculations using information on episodes of contraceptive use that occurred 3-62 months preceding the survey. All methods include users of pill, IUD or PPIUD, rhythm, withdrawal, and other methods, which are not shown separately.
IUD = Intrauterine device; PPIUD = Postpartum intrauterine device
${ }^{1}$ Includes infrequent sex/husband away, difficult to get pregnant/menopausal, and marital dissolution/separation
${ }^{2}$ Includes lack of access/too far, costs too much, and inconvenient to use.
${ }^{3}$ Reasons for discontinuation are mutually exclusive and add to the total given in this column.
${ }^{4}$ The episodes of use included in this column are a subset of the discontinued episodes included in the discontinuation rate. A woman is considered to have switched to another method if she used a different method in the month following discontinuation or if she gave "wanted a more effective method" as the reason for discontinuation and started another method within 2 months of discontinuation.
${ }^{5}$ All episodes of use that occurred within the 5 years preceding the survey are included. Number of episodes of use includes both episodes of use that were discontinued during the period of observation and episodes of use that were not discontinued during the period of observation.
${ }^{6}$ Includes pill, IUD/PPIUD, injectables, male condom, female condom, lactational amenorrhoea method (LAM), diaphragm, foam/jelly, and other modern spacing methods.
${ }^{7}$ Includes pill, IUD/PPIUD, injectables, male condom, female condom, lactational amenorrhoea method (LAM), diaphragm, foam/jelly, rhythm, withdrawal, and other modern spacing and traditional methods.

## Table 34 Men's contraception-related perceptions and knowledge

Percentage of men age 15-49 who agree with two specific statements about women and contraception, and percent distribution of men according to their belief about the efficacy of condoms in preventing pregnancy, by background characteristics, Goa, 2019-21

| Background characteristic | Percentage of men who agree |  | Percentage of men who say that if a male condom is used correctly, it protects against pregnancy: |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Contraception is women's business and a man should not have to worry about it | Women who use contraception may become promiscuous | Most of the time | Sometimes | Not at all | Don't know/unsure ${ }^{1}$ | Total | Number of men |
| Age |  |  |  |  |  |  |  |  |
| 15-19 | (0.0) | (0.0) | (79.7) | (17.0) | (0.0) | (3.3) | 100.0 | 37 |
| 20-24 | 0.0 | 0.0 | 84.6 | 15.4 | 0.0 | 0.0 | 100.0 | 49 |

| Don't know | * | * | * | * | * | * | * | * | * | 3 | 76.0 | 76.0 |
| Total | 4.0 | 4.4 | 8.4 | 18.7 | 49.2 | 67.9 | 22.7 | 53.6 | 76.3 | 1,286 | 89.0 | 78.7 |

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012, Revising Unmet Need for Family Planning, DHS Analytical Studies No. 25, ICF International, Calverton, Maryland, USA. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed.
${ }^{1}$ Total demand is the sum of unmet need and met need
${ }^{2}$ Percentage of demand satisfied is met need divided by total demand
${ }^{3}$ Modern methods include female sterilization, male sterilization, pill, IUD/PPIUD, injectables, male condom, female condom, standard days method, diaphragm, foam/jelly, lactational amenorrhoea method (LAM), other modern methods

Table 36 Unmet need for family planning by district
Percentage of currently married women age 15-49 with unmet need for family planning by district, Goa, 2019-21 and total for NFHS-4

| District | Total <br> unmet need | Unmet need <br> for spacing | Unmet need <br> for limiting | Number of <br> women |
| :--- | :---: | :---: | :---: | :---: |
|  | 9.2 | 4.5 | 4.7 | 763 |
| North Goa | 7.2 | 3.3 | 3.9 | 523 |
| South Goa | 8.4 | 4.0 | 4.4 | 1,286 |
| Goa |  | 8.3 | 9.2 | 1,115 |

Note: Numbers in this table correspond to the revised definition of unmet need described in Bradley et al., 2012, Revising Unmet Need for Family Planning, DHS Analytical Studies No. 25, ICF International Calverton, Maryland, USA.

## Table 37 Hysterectomy

Percentage of women age 15-49 who have had a hysterectomy, and among women with a hysterectomy, median age at the time of hysterectomy and percent distribution by place the hysterectomy was performed, according to background characteristics, Goa, 2019-21

| Background characteristic | Percentage of women who have had a hysterectomy | Number of women | Median age at time of hysterectomy | Number of women who reported age at hysterectomy | Place of hysterectomy |  |  | Total | Number of women with a hysterectomy |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 50-54 | (0.0) | (0.0) | (0.0) | (2.5) | (13.2) | (2.7) | 36 | a | a | a |
| 20-49 | 0.5 | 1.7 | 5.1 | na | na | 43.6 | 240 | a | a | a |
| 25-49 | 0.6 | 1.7 | 5.9 | 8.7 | 19.4 | 29.6 | 191 | a | a | a |

Note: Figures in parentheses are based on 25-49 unweighted cases.
na $=$ Not applicable due to censoring
$a=$ Omitted because less than 50 percent of the women or men were married, began living with their spouse, or had sexual intercourse for the first time before reaching the beginning of the age group.

Table 41 Early childhood mortality rates

Neonatal, postneonatal, infant, child, and under-five mortality rates for five-year periods preceding the survey and for 0-4 years before NFHS-4 and NFHS-3, Goa, 2019-21

| Years preceding <br> the survey | Neonatal <br> mortality <br> $(N N)$ | Postneonatal <br> mortality ${ }^{1}$ <br> $($ PNN $)$ | Infant <br> mortality <br> $\left(1 q_{0}\right)$ | Child <br> mortality <br> $\left(4 q_{1}\right)$ | Under-five <br> mortality <br> $\left(5 q_{0}\right)$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $0-4$ | $(5.6)$ | $(0.0)$ | $(5.6)$ | $(5.0)$ | $(10.6)$ |
| $5-9$ | $(3.7)$ | $(8.8)$ | $(12.4)$ | $(0.0)$ | $(12.4)$ |
| $10-14$ | $(3.7)$ | $(3.6)$ | $(7.2)$ | $(9.5)$ | $(16.7)$ |
|  |  |  |  |  |  |
| NFHS-4 (0-4) | $(12.9)$ | $(0.0)$ | $(12.9)$ | $(0.0)$ | $(12.9)$ |
| NFHS-3 (0-4) | 8.8 | 6.5 | 15.3 | 5.0 | 20.3 |

Note: All estimates are for the 5 years preceding the survey (approximately 2001-2005 for NFHS-3, 2011-2015 for NFHS-4 and 2015-2019 for NFHS-5). Figures in parentheses are based on 250-499 unweighted person-years of exposure to the risk of death.
${ }^{1}$ Computed as the difference between the infant and neonatal mortality rates

Table 43 High-risk fertility behaviour
Percent distribution of children born in the 5 years preceding the survey by category of elevated risk of mortality and percent distribution of currently married women by category of risk if they were to conceive a child at the time of the survey, Goa, 2019-21

| Risk category | Births in the 5 years preceding the survey | Percentage of currently married women ${ }^{1}$ |
| :---: | :---: | :---: |
|  | Percentage of births |  |
| Not in any high-risk category | 24.8 | 42.7,a |
| Unavoidable risk category |  |  |
| First order births between ages 18 and 34 years | 48.2 | 8.6 |
| Single high-risk category |  |  |
| Mother's age <18 | 2.2 | 0.0 |
| Mother's age >34 | 15.2 | 35.8 |
| Birth interval <24 months | 7.5 | 5.3 |
| Birth order >3 | 0.4 | 1.2 |
| Subtotal | 25.3 | 42.3 |
| Multiple high-risk category |  |  |
| Mother's age >34 and birth interval <24 months | 0.4 | 1.6 |
| Mother's age >34 and birth order >3 | 0.9 | 4.2 |
| Mother's age >34 and birth interval <24 months and birth order >3 | 0.0 | 0.0 |
| Birth interval < 24 months and birth order >3 | 0.4 | 0.5 |
| Subtotal | 1.7 | 6.4 |
| In any avoidable high-risk category | 27.0 | 48.6 |
| Total | 100.0 | 100.0 |
| Number of births | 380 | 1,286 |
| na $=$ Not applicable <br> ${ }^{1}$ Women are assigned to risk categories according to the status they would have at the birth of a child if they were to conceive at the time of the survey: current age less than 17 years and 3 months or greater than 34 years and 2 months, latest birth less than 15 months ago, or latest birth of order 3 or higher <br> ${ }^{2}$ Includes the category age <18 and birth order >3 <br> ${ }^{a}$ Includes sterilized women |  |  |

## Table 44 Antenatal care

Percent distribution of women who had a live birth in the 5 years preceding the survey by antenatal care (ANC) provider during pregnancy for the most recent live birth and percentage receiving ANC from a skilled provider, according to background characteristics, Goa, 2019-21

| Background characteristic | Doctor | ANM/ <br> nurse/ midwife/ LHV | $\begin{gathered} \text { Dai } \\ \text { (TBA) } \end{gathered}$ | Anganwadi/ ICDS worker | Community/ <br> village <br> health <br> worker | ASHA | Other | No ANC | Total | Number of women | Percentage receiving ANC from a skilled provider ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mother's age at birth |  |  |  |  |  |  |  |  |  |  |  |
| 20-34 | 98.7 | 0.4 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.9 | 100.0 | 258 | 99.1 |

| Total | 97.7 | 0.9 | 0.0 | 0.4 | 0.0 | 0.0 | 0.0 | 0.9 | 100.0 | 332 | 98.7 |

Note: If more than one source of ANC was mentioned, only the provider with the highest qualification is considered in this table. Figures in parentheses are based on 25-49 unweighted cases. Total includes women with age at birth less than 20 years, women with births of birth order 4 or more, women with no schooling or less than 5 years of schooling, women belonging to other religions, women belonging to scheduled caste or who don't know their caste/tribe, who are not shown separately.
ANM = Auxiliary nurse midwife; LHV = Lady health visitor; TBA = Traditional birth attendant; ICDS = Integrated Child Development Services; ASHA = Accredited Social Health Activist
${ }^{1}$ Skilled provider includes doctor, auxiliary nurse midwife, nurse, midwife, and lady health visitor.
${ }^{2}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

Table 45 Antenatal care services and information received
Percent of women who had a live birth in the 5 years preceding the survey who received antenatal care (ANC) for the most recent live birth by services and information received, according to residence and source of antenatal care, Goa, 2019-21

| Services/information | Residence |  | Source of ANC |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Urban | Rural | Public health sector | Private health sector ${ }^{1}$ |  |
| Percentage receiving selected services during antenatal care |  |  |  |  |  |
| Weighed | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Blood pressure measured | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Urine sample taken | 100.0 | 97.9 | 99.4 | 98.9 | 99.2 |
| Blood sample taken | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Abdomen examined | 100.0 | 99.3 | 99.6 | 100.0 | 99.7 |
| Percentage receiving information on specific pregnancy complications |  |  |  |  |  |
| Vaginal bleeding | 88.2 | 80.8 | 88.6 | 82.0 | 85.3 |
| Convulsions | 84.9 | 81.5 | 90.4 | 82.8 | 83.6 |
| Prolonged labour | 94.5 | 85.3 | 93.9 | 89.3 | 90.8 |
| Severe abdominal pain | 94.8 | 87.2 | 92.3 | 91.5 | 91.8 |
| High blood pressure | 86.2 | 81.7 | 89.9 | 84.6 | 84.4 |
| Where to go if experienced pregnancy complications | 74.4 | 74.1 | 83.9 | 66.5 | 74.3 |
| Number of women | 199 | 130 | 209 | 127 | 329 |

Note: Total includes women who received antenatal care at both the public and private health sectors or only at home, who are not shown separately.
${ }^{1}$ Includes nongovernmental organizations and trust hospitals/clinics

## Table 46 Antenatal care indicators

Among women with a live birth in the 5 years preceding the survey, percentage who received different types of antenatal care (ANC) during the pregnancy for their most recent live birth, by background characteristics, Goa, 2019-21

| Background characteristic | Percentage who had four or more ANC visits | Percentage with an <br> ANC visit in the first trimester of pregnancy | Percentage who received two or more TT injections during the pregnancy | Percentage whose last live birth was protected against neonatal tetanus ${ }^{1}$ | Percentage who were given or bought IFA | Percentage who took IFA for at least 100 days | Percentage who took IFA for at least 180 days | Percentage who took an intestinal parasite drug | Number of women |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mother's age at birth |  |  |  |  |  |  |  |  |  |
| 20-34 | 93.3 | 69.9 | 84.9 | 96.2 | 99.7 | 87.8 | 65.1 | 35.5 | 258 |
| 35-49 | 91.9 | 75.9 | 92.9 | 96.7 | 100.0 | 91.4 | 69.5 | 30.3 | 58 |
| Birth order |  |  |  |  |  |  |  |  |  |
| 1 | 94.9 | 70.8 | 89.5 | 95.2 | 98.9 | 87.9 | 69.5 | 33.7 | 182 |
| 2-3 | 90.4 | 68.8 | 84.2 | 98.9 | 99.4 | 87.5 | 60.0 | 36.2 | 145 |
| Residence |  |  |  |  |  |  |  |  |  |
| Urban | 92.9 | 66.5 | 87.0 | 98.0 | 99.0 | 87.0 | 61.4 | 39.5 | 201 |

| 5-9 years complete | 91.7 | 71.9 | 81.4 | 98.5 | 100.0 | 85.9 | 66.2 | 44.2 | 63 |
| 10-11 years complete | 94.9 | 68.0 | 86.4 | 93.5 | 98.9 | 87.4 | 66.2 | 24.9 | 80 |
| 12 or more years complete | 94.5 | 72.5 | 90.1 | 97.6 | 100.0 | 89.9 | 66.5 | 36.4 | 171 |
| Religion |  |  |  |  |  |  |  |  |  |
| Hindu | 92.5 | 68.9 | 85.8 | 96.1 | 99.6 | 86.2 | 68.0 | 35.6 | 237 |
| Muslim | (100.0) | (71.9) | (86.6) | (100.0) | (100.0) | (85.0) | (58.3) | (28.6) | 28 |
| Christian | 91.7 | 75.7 | 89.1 | 96.5 | 97.0 | 92.9 | 57.8 | 35.6 | 67 |
| Caste/tribe |  |  |  |  |  |  |  |  |  |
| Scheduled tribe | (87.8) | (67.7) | (84.5) | (97.2) | (100.0) | (88.9) | (71.9) | (39.1) | 35 |
| Other backward class | 92.2 | 68.1 | 97.3 | 97.3 | 98.5 | 87.0 | 70.1 | 31.7 | 61 |
| Other ${ }^{2}$ | 94.3 | 71.1 | 83.6 | 96.2 | 99.1 | 86.9 | 62.3 | 34.5 | 213 |
| Total | 93.0 | 70.3 | 86.5 | 96.5 | 99.1 | 87.5 | 65.0 | 35.0 | 332 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes women age 15-19, women with births of birth order 4 or more, women with no schooling or less than 5 years of schooling, women belonging to other religions, women belonging to scheduled caste or who don't know their caste/tribe, who are not shown separately.
TT = Tetanus toxoid; IFA = Iron and folic acid
${ }^{1}$ Includes mothers with two injections during the pregnancy for her last live birth, or two or more injections (the last within 3 years of the last live birth), or three or more injections (the last within 5 years of the last live birth), or four or more injections (the last within 10 years of the last live birth), or five or more injections at any time prior to the last live birth
${ }^{2}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

Table 47 Antenatal care indicators by district
Among women with a live birth in the 5 years preceding the survey, percentage who received different types of antenatal care (ANC) during the pregnancy for their most recent live birth, by district, Goa, 2019-21

| District | Percentage who had four or more ANC visits | Percentage with an ANC visit in the first trimester of pregnancy | Percentage who received two or more TT injections during the pregnancy | Percentage whose last live birth was protected against neonatal tetanus ${ }^{1}$ | Percentage who were given or bought IFA | Percentage who took IFA for at least 100 days | Percentage who took IFA for at least 180 days | Percentage who took an intestinal parasite drug | Number of women |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| North Goa | 91.3 | 74.6 | 84.5 | 95.8 | 98.6 | 84.8 | 68.4 | 35.0 | 212 |
| South Goa | 96.0 | 62.7 | 90.1 | 97.8 | 100.0 | 92.2 | 59.1 | 35.0 | 120 |
| Goa | 93.0 | 70.3 | 86.5 | 96.5 | 99.1 | 87.5 | 65.0 | 35.0 | 332 |

TT = Tetanus toxoid; IFA = Iron and folic acid tablets or syrup
${ }^{1}$ Includes mothers with two injections during the pregnancy for her last live birth, or two or more injections (the last within 3 years of the last live birth), or three or more injections (the last within 5 years of the last live birth), or four or more injections (the last within 10 years of the last live birth), or five or more injections at any time prior to the last live birth.

## Table 48 Advice received during pregnancy

Among women with a live birth in the 5 years preceding the survey who met with a community health worker in the last three months of pregnancy for their most recent live birth, percentage who received different types of advice, by background characteristics, Goa, 2019-21

| Background characteristic | Percentage who received advice on: |  |  |  |  | Number of women who met with a community health worker in the last three months of pregnancy ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Importance of institutional delivery | Cord care | Breastfeeding | Keeping the baby warm | Family planning |  |
| Mother's age at birth |  |  |  |  |  |  |
| 20-34 | 96.0 | 99.4 | 99.6 | 95.0 | 94.7 | 211 |

| Mother's number of living children at time of pregnancy |  |  |  |  |  |  |  |  |
| No children | 97.8 | 264 | 45.4 | 34.5 | 12.9 | 7.3 | 100.0 | 258 |
| 1 child | 97.4 | 161 | 34.7 | 39.7 | 14.9 | 10.7 | 100.0 | 156 |
| 0 sons | 94.8 | 64 | 35.2 | 37.9 | 16.3 | 10.6 | 100.0 | 60 |
| 1 son | 99.0 | 97 | 34.4 | 40.8 | 13.9 | 10.9 | 100.0 | 96 |
| 2 children | (80.1) | 49 | (45.7) | (34.5) | (10.0) | (9.8) | 100.0 | 40 |
| 1 or more sons | (86.4) | 31 | (49.0) | (29.7) | (11.9) | (9.4) | 100.0 | 27 |
| Total | 95.9 | 481 | 41.7 | 36.2 | 13.3 | 8.8 | 100.0 | 461 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes pregnancies of women with no schooling or less than 5 years of schooling, women belonging to other religions, women who don't know their caste/tribe, and women with 2 children but no sons or with 3 or more children, which are not shown separately.
${ }^{1}$ For multiple births, sex of pregnancy outcome is the sex of the first listed birth

## Table 50 Pregnancy registration and Mother and Child Protection Card

Percentage of women age 15-49 who had a live birth in the 5 years preceding the survey who registered the pregnancy for the most recent live birth; and among registered pregnancies, percent distribution by the timing of the registration and percentage who received a Mother and Child Protection (MCP) Card, by background characteristics, Goa, 2019-21

| Background characteristic | Percentage of pregnancies that were registered | Number of pregnancies | Timing of pregnancy registration |  |  | Percentage of mothers given an MCP card | Number of registered pregnancies |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | First trimester | Later | Don't know |  |  |
| Mother's age at birth |  |  |  |  |  |  |  |
| 20-34 | 97.9 | 258 | 78.8 | 21.2 | 0.0 | 99.7 | 253 |
| 35-49 | 96.5 | 58 | 79.7 | 20.3 | 0.0 | 100.0 | 56 |
| Birth order |  |  |  |  |  |  |  |
| 1 | 98.0 | 182 | 80.7 | 19.3 | 0.0 | 100.0 | 178 |
| 2-3 | 97.3 | 145 | 74.3 | 25.7 | 0.0 | 99.5 | 141 |
| Residence |  |  |  |  |  |  |  |
| Urban | 96.8 | 201 | 75.5 | 24.5 | 0.0 | 99.7 | 194 |
| Rural | 99.2 | 132 | 82.2 | 17.8 | 0.0 | 100.0 | 130 |
| Schooling |  |  |  |  |  |  |  |
| 5-9 years complete | 98.4 | 63 | 77.1 | 22.9 | 0.0 | 100.0 | 62 |
| 10-11 years complete | 98.9 | 80 | 75.6 | 24.4 | 0.0 | 99.2 | 79 |
| 12 or more years complete | 97.7 | 171 | 81.6 | 18.4 | 0.0 | 100.0 | 167 |
| Religion |  |  |  |  |  |  |  |
| Hindu | 98.4 | 237 | 75.6 | 24.4 | 0.0 | 100.0 | 234 |
| Muslim | (89.9) | 28 | (79.4) | (20.6) | (0.0) | (97.3) | 25 |
| Christian | 98.4 | 67 | 86.6 | 13.4 | 0.0 | 100.0 | 66 |
| Caste/tribe |  |  |  |  |  |  |  |
| Scheduled tribe | (100.0) | 35 | (77.9) | (22.1) | (0.0) | (100.0) | 35 |
| Other backward class | 98.6 | 61 | 76.0 | 24.0 | 0.0 | 100.0 | 60 |
| Other ${ }^{1}$ | 98.2 | 213 | 79.6 | 20.4 | 0.0 | 99.7 | 209 |
| Total | 97.7 | 332 | 78.2 | 21.8 | 0.0 | 99.8 | 325 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes pregnancies of women age 15-19, pregnancies of birth order 4 or more, pregnancies of women with no schooling or less than 5 years of schooling, pregnancies of women belonging to other religions, and pregnancies of women belonging to scheduled caste or who don't know their caste/tribe, which are not shown separately.
${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

## Table 51 Delivery and postnatal care

Percent distribution of live births to women age 15-49 in the 5 years preceding the survey by place of delivery and assistance during delivery, percentage of live births delivered by a skilled provider and by caesarean section, and percent distribution of women giving birth in the 5 years preceding the survey by timing and type of provider of the first postnatal check of the mother for their most recent live birth, by residence, Goa, 2019-21

| Delivery and postnatal care descriptors | Urban | Rural | Total |
| :---: | :---: | :---: | :---: |
| Place of delivery |  |  |  |
| Health facility | 99.6 | 100.0 | 99.7 |
| Public sector | 53.1 | 61.1 | 56.2 |
| Private sector | 46.5 | 38.9 | 43.5 |
| At home | 0.4 | 0.0 | 0.3 |
| Own home | 0.4 | 0.0 | 0.3 |
| Total | 100.0 | 100.0 | 100.0 |
| Assistance during delivery ${ }^{2}$ |  |  |  |
| Doctor | 94.0 | 96.9 | 95.1 |
| ANM/nurse/midwife/LHV | 4.6 | 3.1 | 4.0 |
| Friends/relatives | 1.0 | 0.0 | 0.6 |
| No one | 0.4 | 0.0 | 0.3 |
| Total | 100.0 | 100.0 | 100.0 |
| Percentage of all births delivered by a skilled provider ${ }^{3}$ | 98.6 | 100.0 | 99.1 |
| Percentage delivered by caesarean section | 39.1 | 40.1 | 39.5 |
| Percentage delivered by emergency caesarean section ${ }^{4}$ | 15.4 | 25.4 | 19.2 |
| Number of births | 234 | 146 | 380 |
| Timing after delivery of mother's first postnatal check ${ }^{6}$ |  |  |  |
| Less than four hours | 83.2 | 86.8 | 84.7 |
| 4-23 hours | 7.3 | 1.4 | 5.0 |
| 1-2 days | 6.0 | 5.5 | 5.8 |
| 3-41 days | 0.5 | 2.6 | 1.4 |
| No postnatal check | 3.0 | 3.6 | 3.2 |
| Total | 100.0 | 100.0 | 100.0 |
| Type of provider of mother's first postnatal check ${ }^{6}$ |  |  |  |
| Doctor | 92.1 | 84.5 | 89.1 |
| ANM/nurse/midwife/LHV | 4.2 | 11.8 | 7.2 |
| Other health personnel | 0.8 | 0.0 | 0.5 |
| No postnatal check | 3.0 | 3.6 | 3.2 |
| Total | 100.0 | 100.0 | 100.0 |
| Number of last live births | 201 | 132 | 332 |

NGO = Nongovernmental organization; ANM = Auxiliary nurse midwife; LHV = Lady health visitor; TBA = Traditional birth attendant
${ }^{1}$ Includes missing
${ }^{2}$ If the respondent mentioned more than one person attending during delivery, only the most qualified person is considered in this table
${ }^{3}$ Skilled health personnel includes doctor, auxiliary nurse midwife, nurse, midwife, lady health visitor, and other health personnel
${ }^{4} \mathrm{~A}$ caesarean section for which the decision to have the operation was made after the onset of labour
${ }^{5}$ Based on the last live birth in the five years preceding the survey
${ }^{6}$ Based on the last live birth in the five years preceding the survey. Postnatal checks are checks on the woman's health within 42 days of the birth
Table 52 Delivery and postnatal care by background characteristics
Percentage of live births in the 5 years preceding the survey delivered in a health facility and percentage delivered with assistance from health personnel, and percentage of women who had a live birth in the 5 years preceding the survey who received a postnatal check and who received a postnatal check within 2 days of birth for their most recent birth, and among births in the year preceding the survey, percentage of deliveries assisted by health personnel, by background characteristics, Goa, 2019-21

| Percentage of live births in the 5 years preceding the survey delivered in a health facility and percentage delivered with assistance from health personnel, and percentag women who had a live birth in the 5 years preceding the survey who received a postnatal check and who received a postnatal check within 2 days of birth for their most birth, and among births in the year preceding the survey, percentage of deliveries assisted by health personnel, by background characteristics, Goa, 2019-21 |  |  |  |  |  |  |  |  |  |  |

## Table 52 Delivery and postnatal care by background characteristics-Continued

Percentage of live births in the 5 years preceding the survey delivered in a health facility and percentage delivered with assistance from health personnel, and percentage of women who had a live birth in the 5 years preceding the survey who received a postnatal check and who received a postnatal check within 2 days of birth for their most recent birth, and among births in the year preceding the survey, percentage of deliveries assisted by health personnel, by background characteristics, Goa, 2019-21

|  |  |  |  |  |  |  |  |  | Among births preceding | the year survey: |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Background characteristic | Percentage <br> of births delivered in a public health facility | Percentage <br> of births delivered in a private health facility | Percentage of births delivered in a health facility | Percentage <br> of deliveries assisted by health personnel ${ }^{1}$ | Number of births | Percentage of women with a postnatal check ${ }^{2,3}$ | women with a postnatal check within two days of birth ${ }^{2,3}$ | Number of women | Percentage of deliveries assisted by health personnel ${ }^{1}$ | Number of births |
| Place of delivery |  |  |  |  |  |  |  |  |  |  |
| Public health facility | 100.0 | 0.0 | 100.0 | 98.9 | 214 | 96.8 | 96.2 | 185 | (97.3) | 49 |
| Private health facility ${ }^{4}$ | 0.0 | 100.0 | 100.0 | 100.0 | 166 | 96.7 | 94.3 | 146 | (100.0) | 40 |
| Total | 56.2 | 43.5 | 99.7 | 99.1 | 380 | 96.8 | 95.4 | 332 | 98.5 | 89 |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes information on births to women age 15-19, births of birth order 4 or more, births to women with no schooling or less than 5 years of schooling, births to women belonging to other religions, and births to women who don't know their caste/tribe, which is not shown separately.
${ }^{1}$ Health personnel includes doctor, auxiliary nurse midwife, nurse, midwife, lady health visitor, and other health personnel. If the respondent mentioned more than one person attending during delivery, only the most qualified person is considered in this table
${ }^{3}$ Postnatal checks are checks on the woman's health within 42 days of the birth ${ }^{4}$ Includes nongovernmental organizations or trust hospitals/clinics

## Table 53 Delivery and postnatal care by district

Percentage of live births in the 5 years preceding the survey delivered in a health facility, percentage delivered with assistance from health personnel, and percentage delivered by caesarean section, and percentage of women who had a live birth in the 5 years preceding the survey who received a postnatal check within two days of birth for their most recent birth, by district, Goa, 2019-21

|  | Percentage <br> of births <br> delivered <br> in a public <br> health facility | Percentage of <br> births <br> delivered <br> in a private <br> health facility | Percentage <br> of births <br> delivered in a <br> health facility | Percentage <br> of deliveries <br> assisted <br> by health <br> personnel ${ }^{1}$ | Percentage <br> of births <br> delivered by <br> caesarean <br> section | Number <br> of <br> births | Percentage of <br> women with <br> postnatal <br> check within <br> two days of <br> delivery ${ }^{2}$ | Number <br> of <br> women |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| District |  |  |  |  |  |  |  |  |

${ }^{1}$ Health personnel includes doctor, auxiliary nurse midwife, nurse, midwife, lady health visitor, and other health personnel. If the respondent mentioned more than one person attending during delivery, only the most qualified person is considered in this table.
${ }^{2}$ Postnatal checks are checks on the woman's health within 42 days of birth.

## Table 54 Delivery costs and financial assistance

The average out-of-pocket cost paid for delivery for the most recent live birth among women who had a live birth in the 5 years preceding the survey that was delivered in a health facility by type of facility, and among women who had a live birth in the 5 years preceding the survey for the most recent birth that was delivered in a health facility, percentage who received financial assistance under Janani Suraksha Yojana (JSY), according to background characteristics, Goa, 2019-21

| Background characteristic | Average cost (Rs.) ${ }^{1}$ |  |  | Percentage who received financial assistance under JSY | Number of births in a health facility |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Public health facility | Private health facility | Any health facility |  |  |
| Mother's age at birth |  |  |  |  |  |
| 20-34 | 3,952 | 34,077 | 16,637 | 8.5 | 256 |
| 35-49 | 3,457 | 44,545 | 29,054 | 4.2 | 55 |
| Birth order |  |  |  |  |  |
| 1 | 4,239 | 35,561 | 20,435 | 6.8 | 213 |
| 2-3 | 3,267 | 37,894 | 15,137 | 8.1 | 116 |
| Residence |  |  |  |  |  |
| Urban | 3,875 | 30,317 | 16,695 | 7.1 | 200 |
| Rural | 3,706 | 47,090 | 21,357 | 7.5 | 132 |
| Schooling |  |  |  |  |  |
| 5-9 years complete | 3,146 | 39,978 | 10,039 | 9.0 | 62 |
| 10-11 years complete | 3,491 | 38,236 | 16,191 | 3.6 | 80 |
| 12 or more years complete | 4,521 | 35,779 | 23,958 | 7.8 | 171 |
| Religion |  |  |  |  |  |
| Hindu | 3,701 | 36,752 | 17,626 | 6.4 | 237 |
| Muslim | $(2,338)$ | $(40,333)$ | $(15,084)$ | (15.1) | 27 |
| Christian | 5,162 | 33,874 | 23,106 | 7.3 | 67 |
| Caste/tribe |  |  |  |  |  |
| Scheduled tribe | $(4,446)$ | $(30,556)$ | $(13,471)$ | (2.4) | 35 |
| Other backward class | 2,935 | 42,598 | 23,007 | 1.6 | 61 |
| Other ${ }^{2}$ | 4,003 | 34,392 | 18,725 | 9.5 | 212 |
| Total | 3,804 | 36,165 | 18,511 | 7.2 | 331 |

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes information on births with mother's age at birth 1519 , births of birth order 4 or more, births to women with no schooling or less than 5 years of schooling, births to women belonging to other religions, and births to women belonging to scheduled caste or who don't know their caste/tribe, which is not shown separately.
${ }^{1}$ Excludes women who don't know the cost
${ }^{2}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

## Table 55 Birth order and delivery characteristics by district

Percentage of births during the 3 years preceding the survey of birth order 3 or more, percentage of women who had a live birth, in the 5 years preceding the survey by antenatal care (ANC) provider during pregnancy for the most recent live birth and among women who had a live birth in the 5 years preceding the survey for the most recent birth that was delivered in a health facility, the percentage of women who received financial assistance under Janani Suraksha Yojana (JSY) by district, Goa, 2019-21

| District | Percentage of births of birth order 3 or more | Number of births | Percentage of last births receiving antenatal care from doctor | Percentage of last births receiving antenatal care from ANM/nurse/ midwife/LHV | Number of last births | Percentage of births in a health facility receiving financial assistance under JSY | Number of births in a health facility |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| North Goa | 9.2 | 140 | 96.8 | 16.5 | 212 | 9.0 | 211 |
| South Goa | 10.9 | 79 | 99.4 | 14.2 | 120 | 4.2 | 120 |
| Goa | 9.8 | 220 | 97.7 | 15.7 | 332 | 7.2 | 331 |

ANM = Auxiliary nurse midwife; LHV = Lady health visitor

## Table 56 Timing of first health check after birth for the newborn

Percent distribution of last births in the 5 years preceding the survey by time after birth of first health check, and the percentage of births with a health check in the first two days after birth, according to background characteristics, Goa, 2019-21

| Background characteristic | Time between delivery and newborn's first postnatal health check |  |  |  |  |  | No postnatal health check ${ }^{1}$ | Total | Percentage of births with a health check in the first two days after birth | Number of births |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Less than 1 hour | 1-3 <br> hours | $\begin{gathered} 4-23 \\ \text { hours } \end{gathered}$ | $\begin{gathered} 1-2 \\ \text { days } \end{gathered}$ | $\begin{array}{r} 3-6 \\ \text { days } \end{array}$ | Don't know/ missing |  |  |  |  |
| Mother's age at birth |  |  |  |  |  |  |  |  |  |  |

 separately.
$\mathrm{BMI}=$ Body
${ }^{1}$ Recumbent length is measured for children under age 2; standing height is measured for all other children
${ }^{2}$ Includes children who are below -3 standard deviations (SD) from the WHO Child Growth Standards population median
${ }^{3}$ Excludes children whose mothers were not interviewed
${ }^{5}$ For women who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the household schedule.
 nutritional status in terms of BMI (Body Mass Index) is presented in Table 78.

## Table 68 Initial breastfeeding

Among last-born children who were born in the 2 years preceding the survey, percentage who were ever breastfed, and percentages who started breastfeeding within 1 hour and 1 day of birth, and among last-born children born in the 2 years preceding the survey who were ever breastfed, percentage who received a prelacteal feed in the first 3 days after birth, by background characteristics, Goa, 2019-21

| Background characteristic | Among last-born children born in the past 2 years: |  |  |  | Among last-born children born in the past 2 years who were ever breastfed: |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percentage ever breastfed | Percentage who started breastfeeding within 1 hour of birth | Percentage who started breastfeeding within 1 day of birth ${ }^{1}$ | Number of last-born children | Percentage who received a prelacteal feed ${ }^{2}$ | Number of last-born ever breastfed children |
| Residence |  |  |  |  |  |  |
| Urban | 100.0 | 63.6 | 96.4 | 85 | 5.4 | 85 |
| Rural | 100.0 | 60.2 | 87.3 | 61 | 16.1 | 61 |
| Sex |  |  |  |  |  |  |

| Total | 100.0 | 62.2 | 92.6 | 147 | 9.9 | 147 |

Note: Table is based on last-born children born in the 2 years preceding the survey regardless of whether the children are living or dead at the time of the interview. Figures in parentheses are based on 25-49 unweighted cases. Total includes children of mothers with no schooling or less than 10 years of schooling, Muslim children, and children belonging to scheduled caste or scheduled tribe, who are not shown separately.
TBA = Traditional birth attendant
${ }^{1}$ Includes children who started breastfeeding within 1 hour of birth
${ }^{2}$ Children given something other than breast milk during the first 3 days of life
${ }^{3}$ Not belonging to scheduled caste, scheduled tribe, or other backward class
Table 69 Breastfeeding status by age
Percent distribution of youngest children under age 2 years living with the mother by breastfeeding status and percentage currently breastfeeding, and percentage of all children under age 2 years using a bottle with a nipple, according to age in months, Goa, 2019-21

| Age in months | Not breastfeeding | Exclusively breastfed | Breastfeeding and consuming: |  |  |  |  | Percentage currently breastfeeding | Number of youngest children under age 2 years living with the mother | Percentage using a bottle with a nipple | Number of all children under age 2 years |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Plain water only | Non-milk liquids ${ }^{1}$ | Other milk | Complementary foods | Total |  |  |  |  |
| 12-17 | (30.1) | (0.0) | (2.6) | (0.0) | (0.0) | (67.4) | 100.0 | (69.9) | 39 | (60.6) | 40 |

 are based on 25-49 unweighted cases.
${ }^{1}$ Non-milk liquids include juice, juice drinks, clear broth, and other liquids.
Table 71 Minimum acceptable diet
Percentage of youngest children age 6-23 months living with their mother who are fed a minimum acceptable diet based on breastfeeding status, number of food groups, and times they are fed during the day or night preceding the survey, according to background characteristics, Goa, 2019-21

| Background characteristic | Among breastfed children 6-23 months, percentage fed: |  |  |  | Among all children 6-23 months, percentage fed: |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Minimum dietary diversity ${ }^{1}$ | Minimum meal frequency ${ }^{2}$ | Minimum acceptable diet $^{3}$ | Number of breastfed children | Breast milk, milk, or milk products ${ }^{4}$ | Minimum dietary diversity ${ }^{1}$ | Minimum meal frequency ${ }^{5}$ | Minimum acceptable $\operatorname{diet}^{6}$ | Number of all children |
| Age in months |  |  |  |  |  |  |  |  |  |
| 6-11 | (32.6) | (51.4) | (15.9) | 44 | (100.0) | (18.6) | (53.6) | (15.2) | 46 |
| 12-17 | (70.6) | (22.6) | (17.6) | 27 | (96.8) | (51.6) | (33.0) | (18.6) | 39 |
| 18-23 | * | * | * | 24 | (100.0) | (81.4) | (49.0) | (36.3) | 28 |
| Sex |  |  |  |  |  |  |  |  |  |
| Male | (59.9) | (42.0) | (25.9) | 47 | 97.8 | 44.9 | 50.1 | 24.2 | 57 |
| Female | (52.8) | (38.7) | (14.6) | 48 | 100.0 | 45.8 | 40.5 | 18.8 | 55 |
| Residence |  |  |  |  |  |  |  |  |  |
| Urban | 63.1 | 43.1 | 18.9 | 51 | 100.0 | 48.4 | 52.4 | 21.1 | 65 |
| Rural | (48.3) | (37.0) | (21.8) | 44 | (97.4) | (41.3) | (35.9) | (22.2) | 48 |
| Mother's schooling |  |  |  |  |  |  |  |  |  |
| 10-11 years complete | (48.3) | (36.9) | (16.6) | 30 | (100.0) | (38.7) | (37.3) | (18.1) | 32 |
| 12 or more years complete | (66.7) | (47.2) | (24.3) | 48 | 100.0 | 49.8 | 56.4 | 25.9 | 62 |
| Total | 56.4 | 40.3 | 20.2 | 95 | 98.9 | 45.4 | 45.4 | 21.5 | 113 |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes children age 6-8 or 9-11 months and children of mothers with no schooling or less than 10 years of schooling, who are not shown separately.
${ }^{1}$ Minimum dietary diversity is receiving foods from 5 or more of the following 8 food groups: a. breast milk b. infant formula, milk other than breast milk, cheese or yogurt or other milk products; c. foods made from grains or roots, including porridge or gruel, fortified baby food made from grains; d. vitamin A-rich fruits and vegetables; e. other fruits and vegetables; f. eggs; g. meat, poultry, fish, shellfish, or organ meats; h. beans, peas, lentils, or nuts
For breastfed children, minimum meal frequency is receiving solid or semi-solid food at least twice a day for infants 6-8 months and at least three times a day for children 9-23 months frequency as described in footnote 2 are considered to be fed a minimum acceptable diet if they are fed the minimum dietary diversity as described in footnote 1 and the minimum meal
${ }^{4}$ Breastfeeding, or not breastfeeding and receiving two or more feedings of commercial infant formula, fresh, tinned, and powdered animal milk, and yogurt
${ }^{5}$ Children are fed the minimum recommended number of times per day according to their age and breastfeeding status as described in footnotes 2 and 5
${ }^{6}$ Children age 6-23 months are considered to be fed a minimum acceptable diet if they receive breast milk, other milk or milk products as described in footnote 7 , are fed the minimum dietary diversity as described in footnote 1 , and are fed the minimum meal frequency as described in footnotes 2 and 5
Table 72 Child feeding practices and nutritional status of children by district
Among last-born children who were born in the 2 years preceding the survey, percentage who started breastfeeding within 1 hour of birth, percentage of youngest children under age 6 months living with the mother who are exclusively breastfed, and percentage of children under age 5 years classified as malnourished according to three anthropometric indices of nutritional status: height-for-age, weight-for-height, and weight-for-age, by district, Goa, 2019-21

| District | Among last born children in the past 2 years <br> Percentage breastfed within 1 hour of birth | Number of children | Percentage of children under age 6 months exclusively breastfed ${ }^{1}$ | Number of children | Height-for-age ${ }^{2}$ |  | Weight-for-height |  | Weight-for-age |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Percentage below-2 SD ${ }^{3}$ | Number of children | Percentage below-2 SD ${ }^{3}$ | Number of children | Percentage below-2 SD ${ }^{3}$ | Number of children |
| North Goa | 64.7 | 97 | * | 21 | 24.2 | 213 | 17.7 | 211 | 25.8 | 217 |
| South Goa | 57.2 | 49 | * | 11 | 28.3 | 134 | 21.4 | 133 | 21.0 | 135 |
| Goa | 62.2 | 147 | (61.4) | 32 | 25.8 | 347 | 19.1 | 344 | 24.0 | 352 |

Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. ${ }^{1}$ Based on the youngest child living with the mother
${ }^{2}$ Recumbent length is measured for children under age 2 , or in the few cases when the age of the child is unknown and the child is less than 85 cm ; standing height is measured for all other children
${ }^{3}$ Based on the WHO Growth Standards population median

Table 73 Prevalence of anaemia in children
Percentage of children age 6-59 months classified as having anaemia, by background characteristics, Goa, 2019-21 and totals for NFHS-4

| Background characteristic | Anaemia status by haemoglobin level |  |  | $\begin{gathered} \text { Any } \\ \text { anaemia } \\ (<11.0 \mathrm{~g} / \mathrm{dl}) \end{gathered}$ | Number of children |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Other ${ }^{3}$ | 24.9 | 27.1 | 2.3 | 54.2 | 181 |

Percentage of children age 6-59 months classified as having anaemia, by background characteristics, Goa, 2019-21 and totals for NFHS-4

|  | Anaemia status by haemoglobin level |  |  |  |  |  |  | Any |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: Table is based on children who stayed in the household the night before the interview and who were tested for anaemia. Prevalence of anaemia, based on haemoglobin levels, is adjusted for altitude using the CDC formula (Centers for Disease Control (CDC). 1998. Recommendations to prevent and control iron deficiency in the United States. Morbidity and Mortality Weekly Report 47 (RR-3): 1-29). Haemoglobin levels shown in grams per decilitre ( $\mathrm{g} / \mathrm{dl}$ ). Figures in parentheses are based on 25-49 unweighted cases. Total includes children age 6-8 or 9-11 months, children of birth order 4 or 5 , children of mothers with no schooling or less than 8 years of schooling, children belonging to other religions, and children belonging to scheduled caste or who have no caste/tribe or whose caste/tribe is missing, who are not shown separately.
${ }^{1}$ Excludes children whose mothers not interviewed and not in the household, who are not shown separately
${ }^{2}$ For mothers who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the household schedule.
${ }^{3}$ Not belonging to scheduled caste, scheduled tribe, or other backward class
${ }^{4}$ Mildly anaemic is $11.0-11.9 \mathrm{~g} / \mathrm{dl}$ for non-pregnant women and $10.0-10.9 \mathrm{~g} / \mathrm{dl}$ for pregnant women. Moderately/severely anaemic is $<11.0 \mathrm{~g} / \mathrm{dl}$ for non-pregnant women and $<10.0 \mathrm{~g} / \mathrm{dl}$ for pregnant women. Adjusted for altitude and for smoking status. Excludes children whose mother's anaemia status is not known.
Table 74 Micronutrient intake among children
Percentage of youngest children age 6-23 months living with the mother who consumed vitamin A-rich and iron-rich foods in the day or night preceding the survey, percentage of
 medication in the last 6 months; percentage of children age 9-35 months who were given vitamin A supplements in the last 6 months; and percentage of children age 6 - 59 months who live in households using iodized salt, by background characteristics, Goa, 2019-21

| Background characteristic | Among youngest children age 6-23 months living with their mother: |  |  | Among children age 6-23 months: |  |  |  | Among children age 9-35 months: |  | Among children age 6-59 months in households with salt tested: |  |

 or 5 , children belonging to other religions, and children whose caste/tribe is not known or whose caste/tribe is missing or who have no caste/tribe, who are not shown separately. na $=$ Not applicable
 ${ }^{3}$ Based on mother's recall
${ }^{4}$ Deworming for intestinal parasites is commonly done for helminths and schistosomiasis
${ }^{5}$ Based on mother's recall and the vaccination card (where available)
${ }^{6}$ Excludes children in households in which salt was not tested. Includes children whose mothers were not interviewed except for birth order. ${ }^{7}$ Excludes children whose breastfeeding status is unknown

## Table 75 Presence of iodized salt in household

Percent distribution of households by salt testing, and among households with salt tested, percentage with iodized salt, according to background characteristics, Goa, 2019-21, and total for NFHS-4

Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes households with household head whose caste/tribe is not known, which are not shown separately.
${ }^{1}$ Includes households in which salt could not be tested for technical or logistical reasons.

Table 76 Presence of iodized salt in household by district
Percent distribution of households by salt testing, and among households with salt tested, percentage with iodized salt, by district, Goa, 2019-21

 belonging to other religions and women/men who don't know their caste/tribe, who are not shown separately.
na = Not applicable; $n c=$ No cases
${ }^{1}$ For pregnant women the value is $10.0-10.9 \mathrm{~g} / \mathrm{dl}$
${ }^{2}$ For pregnant women, the value is $7.0-9.9 \mathrm{~g} / \mathrm{dl}$
${ }^{3}$ For pregnant women, the value is $<7.0 \mathrm{~g} / \mathrm{dl}$
${ }^{4}$ For pregnant women the value is $<11.0 \mathrm{~g} / \mathrm{dl}$

Table 81 Nutritional status and anaemia among children and women by district
Percentage of children age 6-59 months classified as having anaemia and percentage of women age 15-49 years with anaemia and specific body mass index (BMI) levels by district, Goa, 2019-21

| District | Percentage of children having any anaemia ( $<11.0 \mathrm{~g} / \mathrm{dl}$ ) | Number of children | Percentage of women having any anaemia $(<12.0 \mathrm{~g} / \mathrm{dl})^{1}$ | Number of women | Percentage of women with BMI $<18.5$ <br> (total thin) | Percentage of women with BMI $\geq 25.0$ (overweight or obese) | Number <br> of women ${ }^{2}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| North Goa | 55.2 | 171 | 40.0 | 1,098 | 14.1 | 37.2 | 1,083 |
| South Goa | 50.0 | 107 | 37.6 | 851 | 13.5 | 34.6 | 838 |
| Goa | 53.2 | 278 | 38.9 | 1,949 | 13.8 | 36.1 | 1,921 |

Note: Table is based on children who stayed in the household the night before the interview. Prevalence of anaemia, based on haemoglobin levels, is adjusted for altitude using the CDC formula (Centers for Disease Control (CDC). 1998. Recommendations to prevent and control iron deficiency in the United States. Morbidity and Mortality Weekly Report 47 (RR-3): 1-29). Haemoglobin levels shown in grams per decilitre (g/dl). The body mass index (BMI) is expressed as the ratio of weight in kilograms to the square of height in metres $\left(\mathrm{kg} / \mathrm{m}^{2}\right)$.
${ }^{1}$ For pregnant women, the value is $<11.0 \mathrm{~g} / \mathrm{dl}$
${ }^{2}$ Excludes pregnant women and women with a birth in the preceding 2 months
Table 82 Knowledge and prevention of HIV/AIDS
Percentage of women and men age 15-49 who have heard of HIV or AIDS and who, in response to prompted questions, say that people can reduce the risk of getting HIV/AIDS by usin
condoms every time they have sexual intercourse, who know that the risk of getting HIV/AIDS can be reduced by limiting sex to one uninfected partner, who have a comprehensive knowledg
Table 82 Knowledge and prevention of HIV/AIDS
Percentage of women and men age 15-49 who have heard of HIV or AIDS and who, in response to prompted questions, say that people can reduce the risk of getting HIV/AIDS by using
condoms every time they have sexual intercourse, who know that the risk of getting HIV/AIDS can be reduced by limiting sex to one uninfected partner, who have a comprehensive knowledge
Table 82 Knowledge and prevention of HIV/AIDS
Percentage of women and men age 15-49 who have heard of HIV or AIDS and who, in response to prompted questions, say that people can reduce the risk of getting HIV/AIDS by using
condoms every time they have sexual intercourse, who know that the risk of getting HIV/AIDS can be reduced by limiting sex to one uninfected partner, who have a comprehensive knowledge about HIV/AIDS, and who know that HIV/AIDS can be transmitted from a mother to her baby, by background characteristics, Goa, 2019-21

## Table 107 Spousal violence by background characteristics

Percentage of ever-married women age 18-49 by whether they have ever experienced emotional, physical, or sexual violence committed by their husband, according to background characteristics, Goa, 2019-21

| Background characteristic | Emotional violence | Physical violence | Sexual violence | Physical or sexual violence | Emotional, physical, or sexual violence | Number of women |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age |  |  |  |  |  |  |
| 30-39 | 6.4 | 12.0 | 7.6 | 13.2 | 13.2 | 64 |
| 40-49 | 5.6 | 4.0 | 0.9 | 4.0 | 7.1 | 72 |
| Residence |  |  |  |  |  |  |
| Urban | 2.1 | 5.2 | 1.6 | 6.0 | 6.0 | 92 |
| Rural | 12.2 | 8.8 | 8.8 | 11.4 | 14.9 | 65 |
| Schooling |  |  |  |  |  |  |
| 10-11 years complete | (9.9) | (10.0) | (8.5) | (13.9) | (13.9) | 44 |
| 12 or more years complete | 4.4 | 4.1 | 3.3 | 5.3 | 6.7 | 62 |
| Employment (past 12 months) |  |  |  |  |  |  |
| Not employed | 3.3 | 4.4 | 5.3 | 6.7 | 6.7 | 107 |
| Employed for cash | (13.7) | (9.7) | (3.2) | (9.7) | (14.5) | 46 |
| Marital duration ${ }^{1}$ |  |  |  |  |  |  |
| Married only once | 6.4 | 6.8 | 4.7 | 8.4 | 9.9 | 154 |
| $0-4$ years | (7.3) | (5.8) | (7.3) | (13.1) | (13.1) | 23 |
| 5-9 years | (4.3) | (4.3) | (6.9) | (6.9) | (6.9) | 28 |
| 10 or more years | 6.8 | 7.8 | 3.4 | 7.8 | 9.9 | 103 |
| Number of living children |  |  |  |  |  |  |
| 0 | (4.6) | (9.2) | (7.2) | (11.8) | (11.8) | 28 |
| 1-2 | 8.1 | 5.5 | 4.6 | 7.3 | 9.6 | 96 |
| 3-4 | (2.4) | (8.1) | (2.4) | (8.1) | (8.1) | 32 |
| Household structure ${ }^{2}$ |  |  |  |  |  |  |
| Nuclear | 4.0 | 4.3 | 1.6 | 4.3 | 5.2 | 95 |
| Non-nuclear | 9.9 | 10.4 | 9.2 | 14.4 | 16.6 | 62 |
| Religion |  |  |  |  |  |  |
| Hindu | 6.2 | 5.3 | 3.4 | 7.3 | 9.2 | 119 |
| Christian | (7.7) | (9.7) | (9.7) | (9.7) | (9.7) | 32 |
| Caste/tribe |  |  |  |  |  |  |
| Other backward class | (4.1) | (5.2) | (2.0) | (5.2) | (7.3) | 41 |
| Other ${ }^{3}$ | 4.1 | 7.8 | 5.2 | 8.6 | 8.6 | 89 |
| Total | 6.3 | 6.7 | 4.6 | 8.3 | 9.7 | 157 |

Note: Husband refers to the current husband for currently married women and the most recent husband for widowed, divorced, separated, or deserted women. Figures in parentheses are based on 25-49 unweighted cases. Total includes women age 20-29, women with no schooling or less than 10 years of schooling, women who are employed but not for cash, women married more than once, women belonging to Muslim or other religions, and women belonging to scheduled caste or scheduled tribe, who are not shown separately.
${ }^{1}$ Currently married women only
${ }^{2}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted, or fostered) with or without unrelated individuals. The remaining households are non-nuclear households.
${ }^{3}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

## Table 108 Spousal violence by husband's characteristics and empowerment indicators

Percentage of ever-married women age 18-49 who have ever suffered emotional, physical, or sexual violence committed by their husband, according to his characteristics, marital characteristics, and selected empowerment indicators, Goa, 2019-21

| Background characteristic | Emotional violence | Physical violence | Sexual violence | Physical or sexual violence | Emotional, physical, or sexual violence | Number of women |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Husband's schooling |  |  |  |  |  |  |
| 10-11 years complete | (4.2) | (8.5) | (3.0) | (8.5) | (10.3) | 47 |
| 12 or more years complete | 7.3 | 5.8 | 7.3 | 9.4 | 9.4 | 67 |
| Husband's alcohol consumption |  |  |  |  |  |  |
| Does not drink | 2.6 | 3.6 | 0.0 | 3.6 | 5.0 | 102 |
| Gets drunk sometimes | (9.2) | (11.5) | (11.0) | (13.2) | (15.2) | 42 |
| Spousal age difference ${ }^{1}$ |  |  |  |  |  |  |
| Wife 1-4 years younger | 1.5 | 6.5 | 5.0 | 8.2 | 8.2 | 43 |
| Wife 5-9 years younger | 4.3 | 6.8 | 2.1 | 6.8 | 8.2 | 62 |
| Spousal schooling difference |  |  |  |  |  |  |
| Husband has more schooling | 11.5 | 8.6 | 9.3 | 13.0 | 15.6 | 54 |
| Wife has more schooling | 5.7 | 5.4 | 3.0 | 5.4 | 7.1 | 50 |
| Both have equal schooling | 1.5 | 6.2 | 1.3 | 6.2 | 6.2 | 51 |
| Number of marital control behaviours displayed by husband ${ }^{2}$ |  |  |  |  |  |  |
| 0 | 2.0 | 0.7 | 0.7 | 1.3 | 3.3 | 112 |
| 1-2 | (6.4) | (5.5) | (9.3) | (12.0) | (12.0) | 26 |
| Number of reasons for which wife beating is justified ${ }^{3}$ |  |  |  |  |  |  |
| 0 | 3.1 | 3.7 | 1.8 | 3.7 | 4.5 | 108 |
| 1-2 | (9.4) | (5.2) | (3.5) | (5.2) | (11.0) | 24 |
| 3-4 | (13.1) | (14.6) | (10.7) | (25.2) | (25.2) | 23 |
| Afraid of husband |  |  |  |  |  |  |
| Sometimes | 6.4 | 8.1 | 3.6 | 8.8 | 11.2 | 96 |
| Never | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 51 |
| Total | 6.3 | 6.7 | 4.6 | 8.3 | 9.7 | 157 |

Note: Husband refers to the current husband for currently married women and the most recent husband for widowed, divorced, separated, or deserted women. Figures in parentheses are based on 25-49 unweighted cases. Total includes women whose husband has no schooling or has less than 10 years of schooling, women whose husband drinks alcohol but never gets drunk or gets drunk often, women who are older than their husband or are of the same age or are 10 or more years younger, women who have not attended school and whose husband has not attended school, women whose husband displayed 3-6 marital control behaviours, women who gave 7 reasons that wife beating is justified, and women who are afraid of their husband most of the time, who are not shown separately.
${ }^{1}$ Currently married women only
${ }^{2}$ Behaviours include: Is jealous or angry if she talks to other men, frequently accuses her of being unfaithful, does not permit her to meet her female friends, tries to limit her contact with her family, insists on knowing where she is at all times, and does not trust her with any money
${ }^{3}$ Reasons given for which wife beating is justified include: she goes out without telling him, she neglects the house or children, she argues with him, she refuses to have sexual intercourse with him, she doesn't cook properly, he suspects she is unfaithful, and she shows disrespect for in-laws

## Table 110 Help seeking

Percentage of women age 18-49 who have ever experienced physical or sexual violence by whether they have ever sought help, Goa, 2019-21
Help seeking ..... Total
Never sought help and never told anyone ..... (75.7)
(14.7)
Sought help ..... (9.6)
Number of women who experiencedviolence43
Note: Figures in parentheses are based on 25-49 unweighted cases.

## APPENDIX

## ESTIMATES OF SAMPLING ERRORS

The estimates from a sample survey are affected by two types of errors: (1) non-sampling errors, and (2) sampling errors. N on-sampling errors are the results of mistakes made in implementing data collection and data processing, such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the fifth National Family Health Survey (NFHS-5) to minimize this type of error, non-sampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in NFHS-5 is only one of many samples that could have been selected from the same population, using the same design and expected sample size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability among all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

A sampling error is usually measured in terms of the standard error for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to cal culate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic cal culated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95 percent of all possible samples of identical size and design.

If the sample of respondents had been selected as a simple random sample, it would have been possible to use straightforward formulas for calculating sampling errors. However, the NFHS-5 sample is the result of a multi-stage stratified design, and, consequently, it was necessary to use more complex formulae. The computer software used to cal culate sampling errors for NFHS-5 is programmed in SAS. This procedure uses the Taylor linearization method for variance estimation for survey estimates that are means or proportions. The Jackknife repeated replication method is used for variance estimation of more complex statistics such as total fertility rates and child mortality rates.

The Taylor linearization method treats any proportion or mean as a ratio estimate, $r=y / x$, wherey represents the total sample value for variable $y$, and $x$ represents the total number of cases in the group or subgroup under consideration. The variance of $r$ is computed using the formula given below, with the standard error being the square root of the variance:

$$
S E^{2}(r)=\operatorname{var}(r)=\frac{1-f}{x^{2}} \sum_{h=1}^{H}\left[\frac{m_{h}}{m_{h}-1}\left(\sum_{i=1}^{m_{h}} z_{h i}^{2}-\frac{z_{h}^{2}}{m_{h}}\right)\right]
$$

in which

$$
z_{h i}=y_{h i}-r x_{h i} \text {, and } z_{h}=y_{h}-r x_{h}
$$

whereh represents the stratum, which varies from 1 to $H$, $m_{h}$ is the total number of clusters selected in the $h^{\text {th }}$ stratum, $y_{\text {hi }}$ is the sum of the weighted values of variabley in the $i^{\text {th }}$ cluster in the $h^{\text {th }}$ stratum, $\mathrm{X}_{\mathrm{hi}} \quad$ is the sum of the weighted number of cases in the $i^{\text {th }}$ cluster in the $h^{\text {th }}$ stratum, and $f \quad$ is the overall sampling fraction, which is so small that it is ignored.

The Jackknife repeated replication method derives estimates of complex rates from each of several replications of the parent sample, and calculates standard errors for these estimates using simple formulae. Each replication considers all but onecluster in the calculation of theestimates. Pseudoindependent replications are thus created. In the NFHS-5 sample for Goa, there were 84 clusters. Hence, 84 replications were created. The variance of a rate $r$ is calculated as follows:

$$
S E^{2}(r)=\operatorname{var}(r)=\frac{1}{k(k-1)} \sum_{i=1}^{k}\left(r_{i}-r\right)^{2}
$$

in which

$$
r_{i}=k r-(k-1) r_{(i)}
$$

wherer is the estimate computed from the full sample of 84 clusters,
$r_{(i)}$ is the estimate computed from the reduced sample of 83 clusters (ith cluster excluded), and
k is the total number of clusters.
In addition to the standard error, the design effect (DEFT) for each estimate is computed, which is defined as the ratio between the standard error using the given sampledesign and the standard error that would result if a simple random sample had been used. A DEFT value of 1.0 indicates that the sample design is as efficient as a simple random sample, while a value greater than 1.0 indicates the increase in the sampling error due to the use of a more complex and less statistically efficient design. The relative standard error (SE/R) and confidence limits ( $\mathrm{R} \pm 2 \mathrm{SE}$ ) for each estimate are also computed.

Sampling errors for NFHS-5 are calculated for selected variables considered to be of primary interest. The results are presented in this appendix for Goa as a whole. For each variable, the type of statistic (mean, proportion, rate, or ratio) and the base population are given in TableA.1. Table A. 2 presents the total values of the statistic (R), their standard errors (SE), the number of unweighted ( N ) and weighted (WN) cases, the design effect (DEFT), the relative standard error (SE/R), and the 95 percent confidence limits ( $\mathrm{R}+2$ SE) for each variable. The DEFT is considered undefined when the standard error for a simple random sample is zero (when theestimate is close to 0 or 1).

| Variable | Estimate | Base population |
| :---: | :---: | :---: |
| HOUSEHOLDS |  |  |
| Using an improved source of drinking water | Proportion | Households |
| Using an improved sanitation facility | Proportion | Households |
| Using iodized salt | Proportion | Households |
| Sex ratio (females per 1,000 males) | Ratio | De facto household population, all ages |
| WOMEN |  |  |
| No schooling (Females age 6 years and above) | Proportion | De facto household population of females age 6 and above |
| Urban residence | Proportion | Women age 15-49 |
| No schooling (Women age 15-49) | Proportion | Women age 15-49 |
| Completed 10 or more years of schooling | Proportion | Women age 15-49 |
| Never married, including married gauna not performed | Proportion | Women age 15-49 |
| Currently married | Proportion | Women age 15-49 |
| Married before age 18 | Proportion | Women age 20-49 |
| Currently using any contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using a modern contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using a traditional contraceptive method | Proportion | Currently married women age 15-49 |
| Currently using pill | Proportion | Currently married women age 15-49 |
| Currently using IUD/PPIUD | Proportion | Currently married women age 15-49 |
| Currently using condom/Nirodh | Proportion | Currently married women age 15-49 |
| Currently using female sterilization | Proportion | Currently married women age 15-49 |
| Using public health sector source of contraception | Proportion | Women age 15-49 currently using modern methods of contraception |
| Unmet need for family planning | Proportion | Currently married women age 15-49 |
| Want no more children | Proportion | Currently married women age 15-49 |
| Want to delay next birth at least 2 years | Proportion | Currently married women age 15-49 |
| Mother received four or more antenatal care (ANC) visits | Proportion | Women with at least one birth in last five years (last birth) |
| Took iron and folic acid (IFA) for 100 days or more | Proportion | Women with at least one birth in last five years (last birth) |
| Birth registration | Proportion | De jure children under age 5 years |
| Births delivered by a skilled provider | Proportion | Births in last 5 years |
| Institutional delivery | Proportion | Births in last 5 years |
| Postnatal check for mother within 2 days of birth | Proportion | Women with at least one birth in last five years (last birth) |
| Postnatal check for newborn within 2 days of birth | Proportion | Women with at least one birth in last five years (last birth) |
| Exclusive breastfeeding | Proportion | Children under age 6 months |
| Children with diarrhoea in the last two weeks | Proportion | Children under age 5 years |
| Treated with oral rehydration salt (ORS) packets | Proportion | Children under age 5 years with diarrhoea in last 2 weeks |
| Children with diarrhoea taken to a health provider | Proportion | Children under age 5 years with diarrhoea in last 2 weeks |
| Child received BCG vaccination | Proportion | Children age 12-23 months |
| Child received penta or DPT vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child received polio vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child received first dose of measles vaccine | Proportion | Children age 12-23 months |
| Child received penta or hepatitis B vaccination (3 doses) | Proportion | Children age 12-23 months |
| Child with all basic vaccinations | Proportion | Children age 12-23 months |
| Height-for-age, stunting (below -2SD) | Proportion | Children under age 5 years who were measured |
| Weight-for-height, wasting (below -2SD) | Proportion | Children under age 5 years who were measured |
| Weight-for-age, underweight (below -2SD) | Proportion | Children under age 5 years who were measured |
| Children with any anaemia | Proportion | Children age 6-59 months with an anaemia test |
| Women with any anaemia | Proportion | Women age 15-49 with an anaemia test |
| Body mass index ( BMI ) $<18.5 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Women age 15-49 who were measured |
| Body mass index (BMI) $\geq 25.0 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Women age 15-49 who were measured |
| Waist-to-hip ratio $\geq 0.85$ | Proportion | Women age 15-49 who were measured |
| Have heard of HIV or AIDS | Proportion | Women age 15-49 |
| Have comprehensive knowledge about HIV/AIDS | Proportion | Women age 15-49 |
| Ever experienced physical or sexual violence | Proportion | Women age 15-49 |
| Total fertility rate (last 3 years) | Rate | Women |
| Neonatal mortality | Rate | Births in last 5 years |
| Postneonatal mortality | Rate | Births in last 5 years |
| Infant mortality | Rate | Births in last 5 years |
| Child mortality | Rate | Births in last 5 years |
| Under-five mortality | Rate | Births in last 5 years |
| MEN |  |  |
| No schooling (Males age 6 years and above) | Proportion | De facto household population of males age 6 and above |
| Urban residence | Proportion | Men age 15-49 |
| No schooling (Men age 15-49) | Proportion | Men age 15-49 |
| Completed 10 or more years of schooling | Proportion | Men age 15-49 |
| Never married, including married gauna not performed | Proportion | Men age 15-49 |
| Currently married | Proportion | Men age 15-49 |
| Married before age 21 | Proportion | Men age 25-49 |
| Want no more children | Proportion | Currently married men age 15-49 |
| Want to delay next birth at least 2 years | Proportion | Currently married men age 15-49 |
| Men with any anaemia | Proportion | Men age 15-49 with an anaemia test |
| Body mass index ( BMI ) $<18.5 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Men age 15-49 who were measured |
| Body mass index (BMI) $\geq 25.0 \mathrm{~kg} / \mathrm{m}^{2}$ | Proportion | Men age 15-49 who were measured |
| Waist-to-hip ratio $\geq 0.90$ | Proportion | Men age 15-49 who were measured |
| Have heard of HIV or AIDS | Proportion | Men age 15-49 |
| Have comprehensive knowledge about HIV/AIDS | Proportion | Men age 15-49 |

[^0]:    Note: The total columns include transgender persons, who are not shown separately in the male and female columns.
    na $=$ Not applicable
    ${ }^{1}$ Females per 1,000 males
    ${ }^{2}$ Population age 6 and above

[^1]:    na $=$ Not applicable
    ${ }^{1}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted, or fostered) with or without unrelated individuals. The remaining households are non-nuclear households.
    ${ }^{2}$ Protected dug well, protected spring, rainwater, community RO plant, tanker truck, cart with small tank, bottled water
    ${ }^{3}$ Defined as drinking water from an improved source, provided either water is on the premises or round-trip collection time is 30 minutes or less. Includes safely managed drinking water, which is not shown separately.
    ${ }^{4}$ Drinking water from an improved source, provided round-trip collection time is more than 30 minutes or is unknown.
    ${ }^{5}$ Total may add to more than 100.0 because households may use more than one method of treatment
    ${ }^{6}$ Appropriate water treatment methods are boiling, adding bleach/chlorine tablets, filtering, electronic purifying, and solar disinfection
    ${ }^{7}$ Includes ventilated improved pit (VIP) latrine/biogas latrine, and twin pit/composting toilet
    ${ }^{8}$ Facilities that would be considered improved if they were not shared by two or more households
    ${ }^{9}$ Defined as use of improved facilities that are not shared with other households.
    ${ }^{10}$ Defined as use of improved facilities shared by two or more households.
    ${ }^{11}$ Houses made from mud, thatch, or other low-quality materials are called kachha houses, houses that use partly low-quality and partly high-quality materials are called semi-pucca houses, and houses made with high quality materials throughout, including the floor, roof, and exterior walls, are called pucca houses.
    ${ }^{12}$ Electricity, LPG/natural gas, biogas
    ${ }^{13}$ Includes coal/lignite, charcoal, wood, straw/shrubs/grass, agricultural crop waste, and dung cakes
    ${ }^{14}$ Frequency of smoking by anyone inside the house

[^2]:    Note: Women who have been sterilized or whose husband has been sterilized are considered to want no more children. Men who are sterilized or who mention in response to the question about desire for children that their wife has been sterilized are considered to want no more children.
    Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes women/men belonging to other religions and women/men who don't know their caste/ tribe, who are not shown separately.
    na $=$ Not applicable
    ${ }^{1}$ Includes current pregnancy of woman/wife
    ${ }^{2}$ Excludes pregnant women and men with pregnant wives

[^3]:    on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes women/men belonging to other religions and women/men who don't know their caste/tribe, who are not shown separately.

[^4]:    IUD $=$ Intrauterine device; PPIUD = Postpartum intrauterine device; LAM = Lactational amenorrhoea method
    na $=$ Not available

[^5]:    ${ }^{1}$ Based on the last birth to women in the 5 years preceding the survey
    ${ }^{2}$ Based on all births in the 5 years preceding the survey
    ${ }^{3}$ Doctor, auxiliary nurse midwife (ANM), nurse, midwife, lady health visitor (LHV), or other health personnel

[^6]:     belonging to Muslim or other religions, and scheduled caste women, who are not shown separately.
    ${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

[^7]:    Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed.
    na $=$ Not applicable
    ANC = Antenatal care
    ${ }^{1}$ Sexual intercourse with a partner who was neither a spouse nor who lived with the respondent

[^8]:    Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed.
    ${ }^{1}$ Comprehensive knowledge means knowing that consistent use of condoms every time they have sex and having just one uninfected faithful sex partner can reduce the chance of getting HIV/AIDS, knowing that a healthy-looking person can have HIV/AIDS, and rejecting two common misconceptions about transmission or prevention of HIV/AIDS
    ${ }^{2}$ Sexual intercourse with a partner who was neither a spouse nor lived with the respondent

[^9]:    Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes men with no schooling or less than 8 years of schooling, men belonging to Muslim or other religions, and men belonging to a scheduled caste or who don't know their caste/tribe, who are not shown separately.
    ${ }^{1}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

[^10]:    

[^11]:    Note: Figures in parentheses are based on 25-49 unweighted cases. An asterisk indicates that a figure is based on fewer than 25 unweighted cases and has been suppressed. Total includes women/men with no schooling or less than 8 years of schooling, women/men who are employed but not for cash, women/men belonging to Muslim or other religions, and scheduled caste women/men, who are not shown separately.
    ${ }^{1}$ To the market, to the health facility, and to places outside the village/community
    ${ }^{2}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted, or fostered) with or without unrelated individuals. The remaining households are non-nuclear households.
    ${ }^{3}$ Not belonging to scheduled caste, scheduled tribe, or other backward class

[^12]:    Note: Figures in parentheses are based on 25-49 unweighted cases. Total includes women/men belonging to Muslim or other religions, women/men belonging to scheduled caste or who don't know their caste/tribe, and women/men with no schooling or less than 8 years of schooling, who are not shown separately.
    na = Not applicable
    ${ }^{2}$ Nuclear households are households comprised of a married couple or a man or a woman living alone or with unmarried children (biological, adopted or fostered) with or without unrelated individuals. The remaining households are non-nuclear households.

[^13]:    Note: Husband refers to the current husband for currently married women and the most recent husband for widowed, divorced, separated, or deserted women.
    ${ }^{1}$ Includes in the past 12 months
    ${ }^{2}$ Any violence by women against their husband when he was not already beating or physically hurting her

[^14]:    na $=$ Not applicable
